**Desert Visions and the Making of Phoenix, 1860-2009** Philip VanderMeer, 2010-12-16 Whether touted for its burgeoning economy affordable housing and pleasant living style or criticized for being less like a city than a sprawling suburb Phoenix by all environmental logic should not exist Yet despite its extremely hot and dry climate and its remoteness Phoenix has grown into a massive metropolitan area This exhaustive study examines the history of how Phoenix came into being and how it has sustained itself from its origins in the 1860s to its present status as the nation s fifth largest city From the beginning Phoenix sought to grow and although growth has remained central to the city s history its importance meaning and value have changed substantially over the years The initial vision of Phoenix as an American Eden gave way to the Cold War Era vision of a High Tech Suburbia which in turn gave way to rising concerns in the late twentieth century about the environmental social and political costs of growth To understand how such unusual growth occurred in such an improbable location Philip VanderMeer explores five major themes the natural environment urban infrastructure economic development social and cultural values and public leadership Through investigating Phoenix s struggle to become a major American metropolis his study also offers a unique view of what it means to be a desert city

**The Land-Grant Colleges and the Reshaping of American Higher Education**

Roger L. Geiger, 2017-07-05 This work provides a critical reexamination of the origin and development of America s land

grant colleges and universities created by the most important piece of legislation in higher education. The story is divided into five parts that provide closer examinations of representative developments. Part I describes the connection between agricultural research and American colleges. Part II shows that the responsibility of defining and implementing the land grant act fell to the states which produced a variety of institutions in the nineteenth century. Part III details the first phase of the conflict during the latter decades of the nineteenth century about whether land colleges were intended to be agricultural colleges or full academic institutions. Part IV focuses on the fact that full fledged universities became dominant institutions of American higher education. The final part shows that the land grant mission is alive and well in university colleges of agriculture and in fact is inherent to their identity. Including some of the best minds the field has to offer, this volume follows in the fine tradition of past books in Transaction's Perspectives on the History of Higher Education series.

*The Instrumental University* Ethan Schrum, 2019-06-15. In *The Instrumental University*, Ethan Schrum provides an illuminating genealogy of the educational environment in which administrators, professors, and students live and work today. After World War II, research universities in the United States underwent a profound mission change. *The Instrumental University* combines intellectual, institutional, and political history to reinterpret postwar American life through the changes in higher education. Acknowledging but rejecting the prevailing conception of the Cold War university largely dedicated to supporting national security, Schrum provides a more complete and contextualized account of the American research university between 1945 and 1970. Uncovering a pervasive instrumental understanding of higher education during that era, *The Instrumental University* shows that universities framed their mission around solving social problems and promoting economic development as central institutions in what would soon be called the knowledge economy. In so doing, these institutions took on more capitalistic and managerial tendencies and, as a result, marginalized founding ideals such as pursuit of knowledge in academic disciplines and freedom of individual investigators. The technocratic turn eroded some practices that made the American university special. Yet, as Schrum suggests, the instrumental university was not yet the neoliberal university of the 1970s and onwards in which market considerations trumped all others. University of California president Clark Kerr and other innovators in higher education were driven by a progressive impulse that drew on an earlier tradition grounded in a concern for the common good and social welfare.

*The Medical Metropolis* Andrew T. Simpson, 2019-10-04. In 2008, the University of Pittsburgh Medical Centers (UPMC) hoisted its logo atop the U.S. Steel Building in downtown Pittsburgh, symbolically declaring that the era of big steel had been replaced by the era of big medicine for this once industrial city. More than 120 miles to the south, a similar sense of optimism pervaded the public discourse around the relationship between health care and the future of Houston's economy. While traditional Texas industries like oil and natural gas still played a critical role, the presence of the massive Texas Medical Center, billed as the largest medical complex in the world, had helped to rebrand the city as a site for biomedical innovation and ensured its stability during the financial crisis of the mid-2000s. Taking Pittsburgh and

Houston as case studies The Medical Metropolis offers the first comparative historical account of how big medicine transformed American cities in the postindustrial era Andrew T Simpson explores how the hospital civic relationship in which medical centers embraced a business oriented model remade the deindustrialized city into the medical metropolis From the 1940s to the present the changing business of American health care reshaped American cities into sites for cutting edge biomedical and clinical research medical education and innovative health business practices This transformation relied on local policy and economic decisions as well as broad and homogenizing national forces including HMOs biotechnology programs and hospital privatization Today the medical metropolis is considered by some as a triumph of innovation and revitalization and by others as a symbol of the excesses of capitalism and the inequality still pervading American society
