Heumann, Berthold Hock, Hans-Dietrich Lüdemann, Michael Spiteller, 2008-01-08 Refractory organic substances ROS are an essential part of the biogeochemical carbon cycle Wherever there is life on earth there will also be ROS in the form of poorly biodegradable leftovers of organisms and as a source for new life Furthermore it is now beyond doubt that ROS are closely related to the carbon intensity identified as one of the driving forces in the dynamics of green house gas emission such that ROS play a key role in sustainable development Refractory Organic Substances in the Environment provides the results of six years of top priority research funded by the Deutsche Forschungsgemeinschaft DFG This research program investigated the structure and function of ROS in different parts of the environment from a chemical physical biological and soil scientific point of view It included the first systematic study of a set of reference samples from Central Europe originating from a bog lake soil seepage water groundwater and from the wastewaters of a brown coal processing plant and a secondary effluent Thus this work not only highlights the structural features obtained from the application of advanced analytical tools but also the function in anthropogenically influenced aquatic systems and soils Of special interest to students and researchers in life sciences Refractory Organic Substances in the Environment F.
