

RICHARD OWEN
VICTORIAN NATURALIST

Nicolaas A. Rupke

Richard Owen Victorian Naturalist

Nicolaas A. Rupke

Richard Owen Victorian Naturalist:

Richard Owen Nicolaas A. Rupke, 1994 Richard Owen was after Darwin the most important figure in Victorian natural history. He was for most of the six decades of his career Britain's foremost comparative anatomist and vertebrate palaeontologist. As the most renowned opponent of natural selection, Owen was type cast as a Cuvierian creationist and became the bete noire of the Darwinian evolution debate. In this comprehensive intellectual and scientific biography Nicolaas Rupke argues that Owen was no simple minded anti evolutionist and moreover should be freed from the distortion of the evolution dispute that was only a minor part of his work yet has come to dominate his memory. **Richard Owen** Nicolaas Rupke, 2024-05-31 In the mid 1850s no scientist in the British Empire was more visible than Richard Owen. Mentioned in the same breath as Isaac Newton and championed as Britain's answer to France's Georges Cuvier and Germany's Alexander von Humboldt, Owen was as the Times declared in 1856 the most distinguished man of science in the country. But a century and a half later Owen remains largely obscured by the shadow of the most famous Victorian naturalist of all, Charles Darwin. Publicly marginalized by his contemporaries for his critique of natural selection, Owen suffered personal attacks that undermined his credibility long after his name faded from history. With this innovative biography Nicolaas A. Rupke resuscitates Owen's reputation. Arguing that Owen should no longer be judged by the evolution dispute that figured in only a minor part of his work, Rupke stresses context, emphasizing the importance of places and practices in the production and reception of scientific knowledge. Dovetailing with the recent resurgence of interest in Owen's life and work, Rupke's book brings the forgotten naturalist back into the canon of the history of science and demonstrates how much biology existed with and without Darwin. **The Victorian Naturalist**, 1929 *The Great Naturalists* Robert Huxley, 2019-09-24 The story of natural history as seen through the lives, observations and discoveries of the world's greatest naturalists. We owe a debt of gratitude to the naturalists who described, experimented, collected and gave us the means to understand the natural world. They came from all over the globe from classical times to the end of the nineteenth century when natural history changed from a mainly amateur pursuit to today's specialized scientific profession. Braving dangers including storms, pirates and disease in pursuit of cataloging the natural world, pioneers such as Alexander von Humboldt and Charles Darwin changed the course of science with their groundbreaking theories. This book includes many naturalists who are well known such as the earliest great natural historian Aristotle, Carl Linnaeus, the man who brought order to nature, the ornithologist and painter John James Audubon and Georges Cuvier who established the concept of extinction. Others are now given their rightful place: Antony van Leeuwenhoek who made his own microscopes and discovered bacteria, and Mary Anning the princess of paleontology who had an amazing self-taught talent for finding fossils. Many of these people were great artists as well as scientists, and *The Great Naturalists* is illustrated with a selection of beautiful and precise paintings and drawings of birds, animals, fossils, fish, shells and rocks from the unparalleled collections of the Natural History Museum, London. *Genesis and*

Geology Charles Coulston Gillispie, 1996 First published in 1951 *Genesis and Geology* describes the background of social and theological ideas and the progress of scientific researches that between them produced the religious difficulties that afflicted the development of science in early industrial England The book makes clear that the furor over *On the Origin of Species* was nothing new earlier discoveries in science particularly geology had presented major challenges not only to the literal interpretation of the Book of Genesis but even more seriously to the traditional idea that Providence controls the order of nature with an eye to fulfilling divine purpose A new Foreword by Nicolaas Rupke places this book in the context of the last forty five years of scholarship in the social history of evolutionary thought Everyone interested in the history of modern science in ideas and in nineteenth century England will want to read this book *British Logic in the Nineteenth Century* Dov M. Gabbay, John Woods, 2008-03-10 The present volume of the Handbook of the History of Logic is designed to establish 19th century Britain as a substantial force in logic developing new ideas some of which would be overtaken by and other that would anticipate the century's later capitulation to the mathematization of logic *British Logic in the Nineteenth Century* is indispensable reading and a definitive research resource for anyone with an interest in the history of logic Detailed and comprehensive chapters covering the entire range of modal logic Contains the latest scholarly discoveries and interpretative insights that answer many questions in the field of logic **Photography, Natural History and the Nineteenth-Century Museum** Kathleen Davidson, 2017-12-02 The Victorian era heralded an age of transformation in which momentous changes in the field of natural history coincided with the rise of new visual technologies Concurrently different parts of the British Empire began to more actively claim their right to being acknowledged as indispensable contributors to knowledge and the progress of empire This book addresses the complex relationship between natural history and photography from the 1850s to the 1880s in Britain and its colonies Australia New Zealand and to a lesser extent India Coinciding with the rise of the modern museum photography's arrival was timely and it rapidly became an essential technology for recording and publicising rare objects and valuable collections Also during this period the medium assumed a more significant role in the professional practices and reputations of naturalists than has been previously recognized and it figured increasingly within the expanding specialized networks that were central to the production and dissemination of new knowledge In an interrogation that ranges from the first forays into museum photography and early attempts to document collecting expeditions to the importance of traditional and photographic portraiture for the recognition of scientific discoveries this book not only recasts the parameters of what we actually identify as natural history photography in the Victorian era but also how we understand the very structure of empire in relation to this genre at that time [The Fate of Anatomical Collections](#) Rina Knoeff, Robert Zwijnenberg, 2016-03-09 Almost every medical faculty possesses anatomical and or pathological collections human and animal preparations wax and other models as well as drawings photographs documents and archives relating to them In many institutions these collections are well preserved but in others they are poorly maintained and

rendered inaccessible to medical and other audiences This volume explores the changing status of anatomical collections from the early modern period to date It is argued that anatomical and pathological collections are medically relevant not only for future generations of medical faculty and future research but they are also important in the history of medicine the history of the institutions to which they belong and to the wider understanding of the cultural history of the body Moreover anatomical collections are crucial to new scholarly inter disciplinary studies that investigate the interaction between arts and sciences especially medicine and offer a venue for the study of interactions between anatomists scientists anatomical artists and other groups as well as the display and presentation of natural history and medical cabinets In considering the fate of anatomical collections and the importance of the keeper s decisions with respect to collections this volume will make an important methodological contribution to the study of collections and to discussions on how to preserve universities academic heritage

Evolution and the Victorians Jonathan Conlin, 2014-01-16 Charles Darwin s discovery of evolution by natural selection was the greatest scientific discovery of all time The publication of his 1859 book *On the Origin of Species* is normally taken as the point at which evolution erupted as an idea radically altering how the Victorians saw themselves and others This book tells a very different story Darwin s discovery was part of a long process of negotiation between imagination faith and knowledge which began long before 1859 and which continues to this day *Evolution and the Victorians* provides historians with a survey of the thinkers and debates implicated in this process from the late 18th century to the First World War It sets the history of science in its social and cultural context Incorporating text boxes illustrations and a glossary of specialist terms it provides students with the background narrative and core concepts necessary to engage with specialist historians such as Adrian Desmond Bernard Lightman and James Secord Conlin skilfully synthesises material from a range of sources to show the ways in which the discovery of evolution was a collaborative enterprise pursued in all areas of Victorian society including many that do not at first appear scientific

Biographies of Scientists Roger Smith, 1998 Identifies over 500 sources of information about the lives of scientists for young and adult general readers and for scholars Entries ranging from a quarter to a half page in length explain briefly what the subjects achieved worthy of biography as well as describing the work in some detail The works cited include books encyclopedias and periodicals and both biography and autobiography The arrangement is by discipline the social sciences are not included with indexes by author and subject scientist Annotation copyrighted by Book News Inc Portland OR
