Ring Close To Regular:

Rings Close to Regular A.A. Tuganbaev, 2013-03-09 Preface All rings are assumed to be associative and except for nilrings and some stipulated cases to have nonzero identity elements A ring A is said to be regular if for every element $a \in A$ there exists an element $b \in A$ with $aba = a$ Regular rings are well studied For example 163 and 350 are devoted to regular rings A ring A is said to be tr regular if for every element $a \in A$ there is an element $n \in A$ such that $anba = a$ for some positive integer n A ring A is said to be strongly tr regular if for every $a \in A$ there is a positive integer n with $n \geq 1$ and $a^n \in Aa$ It is proved in 128 that A is a strongly tr regular ring if and only if for every element $a \in A$ there is a positive integer m with $m \geq 1$ and $a^m \in Aa$ Every strongly tr regular ring is tr regular 38 If F is a division ring and M is a right vector space with infinite basis e_i then $End M$ is a regular and tr regular ring that is not strongly tr regular The factor ring of the ring of integers with respect to the ideal generated by the integer 4 is a strongly tr regular ring that is not regular

Characterization of Weak Bi-Ideals in Bi-Near Rings S. Maharasi, V. Mahalakshmi, S. Jayalakshmi, In this paper with a new idea we define weak bi ideal and investigate some of its properties We characterize weak bi ideal by biideals of bi near ring In the case of left selfdistributive S bi near ring **Smarandache Near-Rings** W. B. Vasantha Kandasamy, 2002 Generally in any human field a Smarandache Structure on a set A means a weak structure W on A such that there exists a proper subset B in A which is embedded with a stronger structure S These types of structures occur in our everyday life that's why we study them in this book Thus as a particular case A Near Ring is a non empty set N together with two binary operations and such that N is a group not necessarily abelian N is a semigroup For all a, b, c in N we have $a(bc) = (ac)b$ A Near Field is a non empty set P together with two binary operations and such that P is a group not necessarily abelian $P \setminus \{0\}$ is a group For all $a, b, c \in P$ we have $a(bc) = (ac)b$ A Smarandache Near ring is a near ring N which has a proper subset P in N where P is a near field with respect to the same binary operations on N **Smarandache Fuzzy Algebra** W. B. Vasantha Kandasamy, 2003 The author studies the Smarandache Fuzzy Algebra which like its predecessor Fuzzy Algebra arose from the need to define structures that were more compatible with the real world where the grey areas mattered not only black or white In any human field a Smarandache n structure on a set S means a weak structure w_0 on S such that there exists a chain of proper subsets $P_1 \subset P_2 \subset \dots \subset P_n \subset P_{n-1} \subset \dots \subset P_1 \subset S$ whose corresponding structures verify the chain w_{n-1} includes w_n w_n includes w_{n-1} includes w_{n-2} includes w_{n-1} includes w_0 where includes signifies strictly stronger i.e structure satisfying more axioms This book is referring to a Smarandache 2 algebraic structure two levels only of structures in algebra on a set S i.e a weak structure w_0 on S such that there exists a proper subset P of S which is embedded with a stronger structure w_1 Properties of Smarandache fuzzy semigroups groupoids loops bigroupoids biloops non associative rings birings vector spaces semirings semivector spaces non associative semirings bisemirings near rings non associative near ring and binear rings are presented in the second part of this book together with examples solved and unsolved problems and theorems Also

applications of Smarandache groupoids near rings and semirings in automaton theory in error correcting codes and in the construction of S sub biautomaton can be found in the last chapter

Near-Rings and Near-Fields Yuen Fong, Howard E. Bell, Wen-Fong Ke, Gordon Mason, G.F. Pilz, 2012-12-06 Near Rings and Near Fields opens with three invited lectures on different aspects of the history of near ring theory These are followed by 26 papers reflecting the diversity of the subject in regard to geometry topological groups automata coding theory and probability as well as the purely algebraic structure theory of near rings Audience Graduate students of mathematics and algebraists interested in near ring theory **Scientia Magna, Vol. 6. Near-Rings and Near-Fields G. Betsch, 2011-09-22 Most topics in near ring and near field theory are treated here along with an extensive introduction to the theory There are two invited lectures Non Commutative Geometry Near Rings and Near Fields which indicates the relevance of near rings and near fields for geometry while Pseudo Finite Near Fields shows the impressive power of model theoretic methods The remaining papers cover such topics as D G near rings radical theory KT near fields matrix near rings and applications to systems theory

Near-rings: The Theory and its Applications, 2011-10-10 Near rings The Theory and its Applications *The Theory of Near-Rings* Robert Lockhart, 2021-11-14 This book offers an original account of the theory of near rings with a considerable amount of material which has not previously been available in book form some of it completely new The book begins with an introduction to the subject and goes on to consider the theory of near fields transformation near rings and near rings hosted by a group The bulk of the chapter on near fields has not previously been available in English The transformation near rings chapters considerably augment existing knowledge and the chapters on product hosting are essentially new Other chapters contain original material on new classes of near rings and non abelian group cohomology The Theory of Near Rings will be of interest to researchers in the subject and more broadly ring and representation theorists The presentation is elementary and self contained with the necessary background in group and ring theory available in standard references
