Management Malte Sunderkötter, 2004-10-02 Research Paper undergraduate from the year 2004 in the subject Computer Science Commercial Information Technology grade 1 0 A University Karlsruhe TH Institute for Computer Science language English abstract While computer scientists have developed and provided several powerful computer languages and techniques in the last decades facilitating the development of modular maintainable and e cient code software development

itself has changed fundamentally Software development today treats often with large scale projects immense development costs and complex systems which typically deploy multiple technologies and require multiple participants for their development As with any large development exercise the development of a complex system must be systematic and structured in order to manage this complexity and in order to make possible the future maintenance and evolution of the system Thus while systematic and structured approaches are necessary for the development of such systems software engineers have attempted to provide the structured methodologies and formalisms so often lacking in large software development projects However software development projects are still related with many different high risks These risks cause software engineering projects to exceed budgets miss deadlines or deliver less than satisfactory products As an example U S companies alone spent an estimated 59 billion in cost overruns on IT projects and another 81 billion on cancelled software projects in 1995 Johnson 1995 One reason for these high costs is that managers are not using adequate measures and executing efficient risk management assess and mitigate the risks involved in these projects Although risk taking is essential to progress and failure is often a key part of learning the inevitability of risks does not imply the inability to recognize and manage risks to minimize potential negative consequences while retaining the opportunities for creating new and better software Obviously this risk management process is particularly difficult for large scale software projects and be handled in the same way as for small project or just by providing more resources for all development factors
