Dick, 2000 In Many Worlds renowned scientists in fields from physics to astronomy discuss the possibility of a cosmic evolutionary process that guides not only our universe but other planets and universes as well Physicist and author Paul Davies observes that if it turns out to be the case that the universe is inherently bio friendly then the scientific theological and philosophical implications will be extremely significant Many Worlds first focuses on what lessons might be learned from the latest knowledge of the origin and evolution of life After establishing a well grounded relationship between science and religion authors such as Arthur Peacocke and John Leslie evaluate the intricate configuration of events that must occur to create a dynamic and chemically enriched environment capable of not only supporting life but evolutionary processes as well The final section addresses the provocative question of extraterrestrial life What we may find could drastically change our relation to the universe and our creator As we reflect on the possibilities that the universe presents author and contributor Christian de Duve aptly states Many myths have had to be abandoned But mystery remains more profound and beautiful than ever before a reality almost inaccessible to our feeble human means Is our existence part of a divine scheme ingeniously designed to support life or is it an extraordinary chain of accidents that culminate in a life permitting environment The scientific advancements of the past century cannot help but capture the imagination and inspire renewed hope for the future This volume will add dimension and insight to these yet unanswered questions Mindworks: Tomorrow's Challenges.
