**Coping with Crisis: The Resilience and Vulnerability of Pre-Industrial Settlements** Daniel R. Curtis,2016-05-13 Why in the pre industrial period were some settlements resilient and stable over the long term while other settlements were vulnerable to crisis Indeed what made certain human habitations more prone to decline or even total collapse than others All pre industrial societies had to face certain challenges exogenous environmental hazards such as earthquakes or plagues economic or political hazards from outside such as warfare or expropriation of property or hazards of their own making such as soil erosion or subsistence crises How then can we explain why some societies were able to overcome or negate these problems while other societies proved susceptible to failure as settlements contracted stagnated were abandoned or even disappeared entirely This book has been stimulated by the questions and hypotheses put forward by a recent disaster studies literature in particular by placing the intrinsic arrangement of societies at the forefront of the explanatory framework Essentially it is suggested that the resilience or vulnerability of habitation has less to do with exogenous crises themselves but on endogenous societal responses which dictate a the extent of destruction caused by crises and the capacity for society to protect itself and b the capacity to create a sufficient recovery By empirically testing the explanatory framework on a number of societies between the Middle Ages and

the nineteenth century in England the Low Countries and Italy it is ultimately argued in this book that rather than the protective functions of the state or the market or the implementation of technological innovation or capital investment the most resilient human habitations in the pre industrial period were those that displayed an equitable distribution of property and a well balanced distribution of power between social interest groups Equitable distributions of power and property were the underlying conditions in pre industrial societies that all

**Natures in Translation** Alan Bewell, 2017-01-02

Understanding the dynamics of British colonialism and the enormous ecological transformations that took place through the mobilization and globalized management of natures For many critics Romanticism is synonymous with nature writing for representations of the natural world appear during this period with a freshness concreteness depth and intensity that have rarely been equaled Why did nature matter so much to writers of the late eighteenth and early nineteenth centuries And how did it play such an important role in their understanding of themselves and the world In *Natures in Translation* Alan Bewell argues that there is no Nature in the singular only natures that have undergone transformation through time and across space He examines how writers as disparate as Erasmus and Charles Darwin Joseph Banks Gilbert White William Bartram William Wordsworth John Clare and Mary Shelley understood a world in which natures were traveling and resettling the globe like never before Bewell presents British natural history as a translational activity aimed at globalizing local natures by making them mobile exchangeable comparable and representable Bewell explores how colonial writers in the period leading up to the formulation of evolutionary theory responded to a world in which new natures were coming into being while others disappeared For some of these writers colonial natural history held the promise of ushering in a cosmopolitan nature in which every species through trade and exchange might become a true citizen of the world Others struggled with the question of how to live after the natures they depended upon were gone Ultimately *Natures in Translation* demonstrates that far from being separate from the dominant concerns of British imperial culture nature was integrally bound up with the business of empire

**Igniting the Caribbean's Past** Bonham C. Richardson, 2005-12-15 Unlike the earthquakes and hurricanes that have influenced Caribbean history the region's fires have almost always been caused by humans Geographer Bonham C Richardson explores the effects of fire in the social and ecological history of the British Lesser Antilles from the British Virgin Islands south to Trinidad Focusing on the late nineteenth century leading to the 1905 withdrawal of British military forces from the region Richardson shows how fire lit social upheavals served as forerunners of political independence movements Drawing on Caribbean and London archives as well as years of fieldwork Richardson examines how villagers used modified and contemplated fire in part to vent their frustrations with a savage economic depression and social and political inequities imposed from afar He examines fire in all its forms from protest torches to sugarcane fires that threatened the islands economic staple Richardson illuminates a neglected period in Caribbean history

by showing how local uses of fire have been catalysts and even causes of important changes in the region *Rethinking Sustainability* Jonathan Mark Harris, 2009-11-12 Bringing together the thoughts of economists political scientists anthropologists philosophers and agricultural policy professionals this volume focuses on the issues of sustainability in development Examining such topics as international trade political power gender roles legal institutions and agricultural research the contributors focus on the missing links in theory and practice that have been barriers to the achievement of truly sustainable development Any theory of sustainable development must take into account economic social and environmental dimensions Until recently the question What is development was often answered predominantly from the economist's perspective with high priority being assigned to expansion of economic output Social political institutional and ethical aspects have often been neglected But now that sustainable development has become a broadly accepted concept it is impossible to maintain a narrowly economic view of development For this reason the varied perspectives offered by the contributors to this volume are crucial to understanding the process of development as it relates to environmental sustainability and human well being The selection of articles is meant to be stimulating and provocative rather than comprehensive They are roughly divided between those dealing with broad theoretical issues concerning the economic political and social aspects of development Part I and those presenting more applied analysis Part II The common thread is a concern for examining which factors contribute to making development socially just and environmentally sound *Rethinking Sustainability* will be of interest to economists and social scientists development professionals and instructors seeking to offer their students a broad perspective on development issues Jonathan Harris is Senior Research Associate Global Development and Environment Institute at Tufts University as well as Adjunct Associate Professor of International Economics at Tufts University Fletcher School of Law

**The Unending Frontier** John F. Richards, 2003-05-15 It was the age of exploration the age of empire and conquest and human beings were extending their reach and their numbers as never before In the process they were intervening in the world's natural environment in equally unprecedented and dramatic ways A sweeping work of environmental history *The Unending Frontier* offers a truly global perspective on the profound impact of humanity on the natural world in the early modern period John F. Richards identifies four broadly shared historical processes that speeded environmental change from roughly 1500 to 1800 c e intensified human land use along settlement frontiers biological invasions commercial hunting of wildlife and problems of energy scarcity *The Unending Frontier* considers each of these trends in a series of case studies sometimes of a particular place such as Tokugawa Japan and early modern England and China sometimes of a particular activity such as the fur trade in North America and Russia cod fishing in the North Atlantic and whaling in the Arctic Throughout Richards shows how humans whether clearing forests or draining wetlands transporting bacteria insects and livestock hunting species to extinction or reshaping landscapes altered the material well being of the natural world along with their own

**Sea and**

**Land** Philip D. Morgan, John Robert McNeill, Matthew Mulcahy, Stuart B. Schwartz, 2022 Sea and Land provides an in depth environmental history of the Caribbean to ca 1850 with a coda that takes the story into the modern era It explores the mixing movement and displacement of peoples and the parallel ecological mixing of animals plants microbes from Africa Europe elsewhere in the Americas and as far away as Asia It examines first the arrival of Native American to the region and the environmental transformations that followed It then turns to the even more dramatic changes that accompanied the arrival of Europeans and Africans in the fifteenth century Throughout it argues that the constant arrival dispersal and mingling of new plants and animals gave rise to a creole ecology Particular attention is given to the emergence of Black slavery sugarcane and the plantation system an unholy trinity that thoroughly transformed the region s demographic and physical landscapes and made the Caribbean a vital site in the creation of the modern western world Increased attention to issues concerning natural resources conservation epidemiology and climate have now made the environment and ecology of the Caribbean a central historical concern Sea and Land is an effort to integrate that research in a new general environmental history of the region Intended for scholars and students alike it aims to foster both a fuller appreciation of the extent to which environmental factors shaped historical developments in the Caribbean and the extent to which human actions have transformed the biophysical environment of the region over time The combined work of eminent authors of environment and Latin American and Caribbean history Sea and Land offers a unique approach to a region characterized by Edenic nature and paradisiacal qualities as well as dangers diseases and disasters     Bulletin of the United States Geological Survey Geological Survey (U.S.), 1904     **Bibliography and Index of North American Geology, Paleontology, Petrology, and Mineralogy, for 1892 and 1893, [1894-1899, 1901-1904]** Fred Boughton Weeks, 1906     **Geologic Literature on North America** , 1906
