

DIVISION OF LABOUR

Marx's most important theoretical contribution was his sharp distinction between the social division and the technical or economic division of labour.

That is, some forms of labour co-operation are due purely to technical necessity, but others are purely a result of a social control function related to a class and status hierarchy.

If these two divisions are conflated, it might appear as though the existing division of labour is technically inevitable and immutable, rather than socially constructed and influenced by power relationships.

Marx also suggests that the capitalist division of labour will evolve over time such that the maximum amount of labour is productive labour, where productive labour is defined as labour which creates surplus value.

philosophy at Northwestern University considers the two most important philosophers of the modern age I conducted my research during three years in Germany at Heidelberg where Heidegger's work was continued and at Frankfurt where critical theory extended Marx thinking In recent years I have applied conceptual and methodological perspectives from Marx and Heidegger to the theory of CSCL In particular Marx countered the ideology of individualism by analyzing social structures and interpersonal interactions at different units of analysis than the individual person Heidegger also questioned the traditional ontology of natural objects with innate attributes by proposing dynamic interactive processes of beings in their ecological context Today the philosophies of Marx and Heidegger are still extremely relevant provided one adapts them to the current socio historical context and adjusts each to the implicit criticisms of the other Rationalist Empiricism

Nathan Brown, 2021-01-05 Honorable Mention Aldo and Jeanne Scaglione Prize for Comparative Literary Studies Modern Language Association Twenty first century philosophy has been drawn into a false opposition between speculation and critique Nathan Brown shows that the key to overcoming this antinomy is a re engagement with the relation between rationalism and empiricism If Kant's transcendental philosophy attempted to displace the opposing priorities of those orientations any speculative critique of Kant will have to re open and consider anew the conflict and complementarity of reason and experience Rationalist Empiricism shows that the capacity of reason and experience to extend and yet delimit each other has always been at the core of philosophy and science Coordinating their discrepant powers Brown argues is what enables speculation to move forward in concert with critique Sweeping across ancient modern and contemporary philosophy as well as political theory science and art Brown engages with such major thinkers as Plato Descartes Hume Hegel Marx Heidegger Bachelard Althusser Badiou and Meillassoux He also shows how the concepts he develops illuminate recent projects in the science of measurement and experimental digital photography With conceptual originality and argumentative

Marx and the Politics of Abstraction Paul Paolucci, 2011-03-05 Many scholars see science and politics as mutually exclusive realms where the latter's influence contaminates former's purity Karl Marx's critics often interpret him within this framework where his value laden judgments render his analysis of capitalism moot Though defenders argue that Marx rejects an objective subjective dichotomy this book offers a different interpretation Through the method of critique Marx examines problems and biases in putatively neutral forms of scientific knowledge specifically models

that fail to capture the relations of power and knowledge dominant in capitalist society By incorporating these relations into his abstractions and tracing their historical movement Marx's corrective to malformed approaches to scientific knowledge more readily lays bare capitalist society's exploitative and distortive nature This book demonstrates these principles and applies them to conventional sociological methods theories of religion and class analysis

Capitalism, Class Conflict and the New Middle Class (RLE Social Theory) Bob Carter, 2014-08-21 Non manual workers are fast becoming the largest occupational category in Western capitalist countries This is the first book to present a detailed socialist analysis of this much discussed change in the class structure of contemporary capitalism Focusing on the class position of managerial and supervisory workers Robert Carter takes as his starting point the inadequacy of both orthodox Marxist and Weberian models of class relations Rather he concurs with recent structuralist theorists of class who maintain that there exists between capital and labour in the process of producing a new middle class He parts company from the work of these theorists however in his insistence that the organisation and consciousness of the new middle class have also to be examined because of the practical consequences these have on class relations The book therefore examines the historical rise of the middle class both in the private and the state sector together with the tendency of the class to respond to its changing relations with capital and labour by unionising It is sharply critical of the dominant models of the causes and nature of white collar unionism both industrial relations and Weberian ones and indeed rejects these models in favour of a perspective which views the extent and nature of middle class unionism within the dynamics of class relations
