Routledge Handbook of Marxian Economics David M. Brennan, David Kristjanson-Gural, Catherine P. Mulder, Erik K. Olsen, 2017-03-16 Most developed economies are characterized by high levels of inequality and an inability to provide stability or opportunity for many of their citizens Mainstream economics has proven to be of little assistance in addressing these systemic failures and this has led both scholars and students to seek alternatives One such alternative is provided by Marxian economics In recent decades the field has seen tremendous theoretical development and Marxian perspectives have begun to appear in public discourse in unprecedented ways This handbook contains thirty seven original essays from a wide range of leading international scholars recognized for their expertise in different areas of Marxian economics Its scope is broad ranging from contributions on familiar Marxist concepts such as value theory the labor process accumulation crisis and socialism to others not always associated with the Marxian canon like feminism ecology international migration and epistemology This breadth of coverage reflects the development of Marxian economic and social theory and encompasses both the history and the frontiers of current scholarship This handbook provides an extensive statement of the current shape and future direction of Marxian economics The Routledge Handbook of Marxian Economics is an invaluable resource for students researchers and policy makers seeking guidance in this field It is designed to serve both as a reference work and as a supplementary text for classroom use with applications for courses in economics sociology political science management anthropology development studies philosophy and history

Marx' Critique of Science and Positivism G. McCarthy, 2012-12-06 political economy With this in mind the reader will be taken through three meta theoretical levels of Marx method of analysis of the structures of capitalism 1 the clarification of critique and method from Kant's epistemology Hegel's phenomenology to Marx political economy Chapter One 2 the analysis of critique and time that is the temporal dimensions of the critical method as they evolve from Hegel's Logic to Marx Capital and the difference between the use of the future in explanatory positivist science and critique Chapter Two 3 and finally critique and materialism a study of the complexity of the category of materialism the ambivalence and ambiguity of its use in Marx critical method and the ontological and logical dilemmas created by the Schelling Feuerbach turn toward materialism in their critique of Hegel Chapter Three The critique of political economy is therefore examined at the levels of methodology temporality and ontology To what do the categories of political economy really refer when the positivist interpretations of Marx have been shattered and critique becomes the method of choice What kind of knowledge do we have if it is no longer scientific in the traditional sense of both epistemology and methodology And what kind of applicability will it have when its format is such as not to produce predictive technical knowledge but practical knowledge in the Greek sense of the word Praxis What becomes of the criterion of truth when epistemology itself like science is

Constructing Marxist Ethics, 2015-02-04 Does Marxism possess an ethical impulse Is there a moral foundation

that underpins the Marxist critique of capitalism and the vision for social progress The essays collected in *Constructing Marxist Ethics Critique Normativity Praxis* argue that there is such an ethical grounding for Marxist theory The essays each from different vantage points construct what a Marxian ethics should look like what kind of values should be at the heart of the Marxian enterprise Contributors are Dan Albanese Paul Blackledge Bob Cannon Tony Burns Ian Fraser Ruth Groff Wadood Hamad Christoph Henning Peter Hudis Lauren Langman George E McCarthy Sean Sayers Michael J Thompson and Lawrence Wilde

The State and the Tributary Mode of Production John F. Haldon, 1993 In this groundbreaking critique of both traditional and Marxist notions of feudalism and of the pre capitalist state John Haldon considers the configuration of state and social relations in medieval Europe and Mughal India as well as in Byzantium and the Ottoman Empire He argues that a Marxist reading of the pre capitalist state can take account of the autonomy of power relations and avoid economic reductionism while still focusing on the forms of tribute which sustained the ruling power Haldon explores the conflicts to which these gave rise and shows the Ottoman state elite often held to be a clear example of independence from underlying social relations to be deeply enmeshed in economic relationships and the extraction of tribute Haldon argues that feudalism was the specifically European form of a much more widely diffused tributary mode whose characteristic social relations and structural constraints can be seen at work in the Byzantine Ottoman and Mughal empires as well While acknowledging the range of ideological and cultural variation within and between these examples of the tributary mode Haldon denies the thesis that such superstructural variations themselves yielded fundamentally contrasting social relations

Marx and Social Justice George E. McCarthy, 2017-11-01 In *Marx and Social Justice* George E McCarthy presents a detailed and comprehensive overview of the ethical political and economic foundations of Marx's theory of social justice in his early and later writings What is distinctive about Marx's theory is that he rejects the views of justice in liberalism and reform socialism based on legal rights and fair distribution by balancing ancient Greek philosophy with nineteenth century political economy Relying on Aristotle's definition of social justice grounded in ethics and politics virtue and democracy Marx applies it to a broader range of issues including workers control and creativity producer associations human rights and human needs fairness and reciprocity in exchange wealth distribution political emancipation economic and ecological crises and economic democracy Each chapter in the book represents a different aspect of social justice Unlike Locke and Hegel Marx is able to integrate natural law and natural rights as he constructs a classical vision of self government of the people by the people

Historical Dictionary of Marxism Elliott Johnson, David Walker, Daniel Gray, 2014-09-09 The second edition of the *Historical Dictionary of Marxism* covers of the basics of Karl Marx's thought the philosophical contributions of later Marxist theorists and the extensive real world political organizations and structures his work inspired that is the myriad political parties organizations countries and leaders who subscribed to Marxism as a creed This text includes a chronology an introductory essay and an extensive bibliography The dictionary section has over 500 cross referenced entries on important

personalities both thinkers and doers political parties and movements and major communist or ex communist countries This book is an excellent access point for students researchers and anyone wanting to know more about Marxism *Critical Realism and Marxism* Andrew Brown, Steve Fleetwood, John Michael Roberts, 2003-09-02 This book examines the relationship between critical realism and Marxism The authors argue that critical realism and Marxism have much to gain from each other This is the first book to address the controversial debates between critical realism and Marxism and it does so from a wide range of disciplines The authors argue that whilst one book cannot answer all the questions about the relationship between critical realism and Marxism this book does provide some significant answers In doing so Critical Realism and Marxism reveals a potentially fruitful relationship deepens our understanding of the social world and makes an important contribution towards eliminating the barbarism that accompanies contemporary capitalism *Marx and Education in Late Capitalism* R. F. Price, 1986-01-01 The major premise of this book is that efforts to construct a Marxist analysis of education centered on schools and schooling are misdirected Instead the author contends that explorations of education must more importantly focus on the valuable learning experiences that occur outside the classroom Using Marx's own writings as a guide to interpreting past and present events the author explores how education should be conceptualized in order to liberate working people He identifies those aspects of education linked with the specifically capitalist nature of our societies and those that give hope of the cooperative responsible society that Marx anticipated *Marx, Engels and the Philosophy of Science* David Bedford, Thomas Workman, 2022-12-31 This book expounds the dialectical conception of science largely implicit in the writings of Marx and Engels offering a sympathetic reconstruction of a philosophy of science commensurate with Marx's thought Drawing on a reading of dialectics found in Plato and Hegel it recasts Marx's implicit ontology in terms of dialectical conceptions of the world as these conceptions have responded to the growing sophistication of modern science It thus deepens our understanding of materialist philosophy as it relates to science and draws out Marx's logic of science in light of continuing discussions As such it will appeal to philosophers with interests in the nature and development of science and Marxist thought [The Cambridge History of Science: Volume 7, The Modern Social Sciences](#) David C. Lindberg, Theodore M. Porter, Roy Porter, Ronald L. Numbers, 2003-08-04 This volume provides a history of the concepts practices institutions and ideologies of social sciences including behavioural and economic sciences since the eighteenth century It offers original synthetic accounts of the historical development of social knowledge including its philosophical assumptions its social and intellectual organization and its relations to science medicine politics bureaucracy philosophy religion and the professions Its forty two chapters include inquiries into the genres and traditions that formed social science the careers of the main social disciplines psychology economics sociology anthropology political science geography history and statistics and international essays on social science in Eastern Europe Asia Africa and Latin America It also includes essays that examine the involvement of the social sciences in government business education culture and social policy This is

a broad cultural history of social science which analyzes from a variety of perspectives its participation in the making of the modern world

Creativity in Social Revolutions Bronislaw Czarnocha, 2025-08-23 This book offers a new perspective on the structure of contemporary social revolutions and wars It analyzes the actions of the participants and looks at possible solutions from the perspective of bisociativity The book elaborates on this concept originally formulated by Arthur Koestler which sees the underlying human creativity in finding a solution as a spontaneous leap of insight connecting previously unconnected matrices of discourse Drawing from Marxist theory the author discerns bisociative frames in contemporary revolutions such as the Bolivian revolution of 2000 2003 2005 or between different uprisings in Poland which led to the independent workers union solidarity One of the central aims of the book is the search for a bisociative frame that includes historical materialism as one of its two components It suggests that historical materialism is not a sufficient but necessary condition for understanding the complexity of contemporary struggles Discussions in different chapters point to the missing component of Marxist revolutionary theory individual self identity as the second component of the bisociative frame The author brings this analysis to the table from his background in mathematics education and teaching and points to how using mathematical generalization may help identify bisociative frames and therefore help find innovative solutions to conflicts This book offers an innovative theoretical framework for current problems from a Marxist perspective and is an interesting read for social scientists historians and anyone critically examining contemporary social revolutions or wars

Post-Marxism Stuart Sim, 2013-04-15 This book traces the crystallisation of post Marxism as a specific theoretical position in its own right and considers the role played in its development by post structuralism postmodernism and second wave feminism It examines the history of dissenting tendencies within the Marxist tradition and considers what the future prospects of post Marxism are likely to be

Material Powers Tony Bennett, Patrick Joyce, 2013-05-13 This edited collection is a major contribution to the current development of a material turn in the social sciences and humanities It does so by exploring new understandings of how power is made up and exercised by examining the role of material infrastructures in the organization of state power and the role of material cultural practices in the organization of colonial forms of governance A diverse range of historical examples is drawn on in illustrating these concerns from the role of territorial engineering projects in seventeenth century France through the development of the postal system in nineteenth century Britain to the relations between the state and road building in contemporary Peru for example The colonial contexts examined are similarly varied ranging from the role of photographic practices in the constitution of colonial power in India and the measurement of the bodies of the colonized in French colonial practices to the part played by the relations between museums and expeditions in the organization of Australian forms of colonial rule These specific concerns are connected to major critical re examination of the limits of the earlier formulations of cultural materialism and the logic of the cultural turn The collection brings together a group of key international scholars whose work has played a leading role in debates in and across the fields of history visual culture
