Abstract Mathematical Cognition Wolfgang Grodd,Philippe Chassy,2016-08-09 Despite the importance of mathematics in our educational systems little is known about how abstract mathematical thinking emerges Under the uniting thread of mathematical development we hope to connect researchers from various backgrounds to provide an integrated view of

abstract mathematical cognition Much progress has been made in the last 20 years on how numeracy is acquired Experimental psychology has brought to light the fact that numerical cognition stems from spatial cognition The findings from neuroimaging and single cell recording experiments converge to show that numerical representations take place in the intraparietal sulcus Further research has demonstrated that supplementary neural networks might be recruited to carry out subtasks for example the retrieval of arithmetic facts is done by the angular gyrus Now that the neural networks in charge of basic mathematical cognition are identified we can move onto the stage where we seek to understand how these basics skills are used to support the acquisition and use of abstract mathematical concepts

Improving Poorly Performing Schools in England Great Britain: National Audit Office,2006-01-11 In 2004 05 approximately 837 million was spent in England on a range of national programmes to help address problems in schools that were failing or at risk of failing to provide an acceptable standard of education for their pupils and five new academies were opened with an estimated total development cost of around 160 million This NAO report focuses on two key issues whether enough is being done to identify and support schools that show signs of deteriorating performance and whether the measures being taken to address poor performance are effective to ensure continued improvement in recovered schools The effectiveness of national initiatives and local actions are assessed and examples of good practice from schools that have been successfully turned around are highlighted Recommendations made include the need for the DfES and local authorities to combine efforts to identify schools at risk and intervene before schools fail schools to prioritise school leadership and to establish a positive culture centred on teaching and learning and Ofsted to carry out more frequent inspections of vulnerable or poorly performing schools

report sets out a number of recommendations on how test delivery can improve in future years and has set out a number of key priorities including that the delivery process of the National Curriculum tests should be modernised and improved in consultation with the marking community including piloting online marking that whatever process is used should be thoroughly piloted and project managed to ensure schools and pupils get their results on time that the customer service provided to markers must be vastly improved to ensure that they are properly supported and are able to access up to date information
