## **Long-term Environmental Change in Arctic and Antarctic**

**Lakes** Reinhard Pienitz, Marianne S.V. Douglas, John P. Smol, 2007-11-08 Concerns about the effects of global climate change have focused attention on the vulnerability of circumpolar regions Long term historical data are needed to better understand the magnitude and direction of environmental change related to both natural and anthropogenic causes as well as to assess patterns of natural variability The paucity of instrumental data requires that proxy methods be used The abundance of lakes throughout the Arctic and Antarctic makes paleolimnological approaches especially powerful tools to assist interpretations of environmental change This book provides a synthesis of the broad spectrum of techniques available for generating long term environmental records from circumpolar lakes It also provides overviews of the geographic extent of paleolimnological work completed thus far in these regions It explores the diverse ways in which paleolimnology is used to address the pressing and emerging environmental issues of high latitude regions By providing both an introduction and in depth reviews this volume is of interest to students and advanced researchers alike who are studying earth atmospheric and environmental sciences

**Quaternary Vegetation Dynamics of Europe** Gerhard Lang, Brigitta Ammann, Karl-Ernst Behre, Willy Tinner, 2023-06-12 Based on palaeoecological studies by many authors this book gives an overview of the changing history of the European plant cover during the past 2.6 million years characterized by numerous cold and warm periods The period of the last 20 000 years from the Last Glacial Maximum to the present is presented in detail with special emphasis on the vegetation dynamics of Europe the history of selected woody plants the development of lakes and bogs and the emergence of European cultural landscapes under the influence of humans over thousands of years In the analysis of the glacial and interglacial periods the focus is on the different vegetation developments and the progressive impoverishment of the European flora Further important topics are the spatio temporal patterns and causes of long term vegetation changes the

legacies of disturbances and land use on vegetation composition the role of palaeoecology in nature conservation and its contribution to ecology and environmental sciences In addition to recent research results the book provides an overview of the main palaeoecological research methods It concludes with a summary of the history of palaeoecology and Quaternary botany For the first time a detailed synthesis is presented of the many findings on European vegetation dynamics which are complex and increasingly difficult to summarize Numerous figures and tables many of them original accompany the text The bibliography includes over 3000 publications This book is primarily intended for students researchers and practitioners in plant ecology palaeoecology palaeoclimatology forestry agronomy Quaternary sciences climate sciences biogeography geography and archaeology

*The Geohistorical Approach* Silvia Elena Piovan, 2020-05-14 This book gives a comprehensive view of the strengths and limits of the interdisciplinary methods that work together to form the geohistorical approach to geographical and geological sciences The geohistorical approach can be synthetically defined as a multi and interdisciplinary approach that uses techniques and perspectives mainly from geography history and natural sciences to examine topics that inform the space time knowledge of environment territory and landscape The boundary between the application of physical and human science methods is large and hazy This volume exists at this boundary and offers an approach that utilizes both historical data from both physical and human records and GIScience e g GIS cartography GPS remote sensing to investigate the evolution of the environment territory and landscape through both space and time The first objective of this volume is to define the term geohistorical approach An entire chapter focuses on a review of the main disciplines that connect geography and history a review of the terms environment territory and landscape as objects of study of this approach and the definition and importance of the geohistorical approach The second goal is to describe the methods used in the geohistorical approach Eight chapters present the key methods also using examples of applications from the international context offering an awareness of the potentials limitations and accuracy of each method with particular focus on the integration of methods The third goal is to provide case studies to demonstrate the use and integration of geohistorical methods from both original material and published research A final chapter is dedicated to an interdisciplinary case study from the Venetian Plain Italy providing an example of the integration of almost all methods described in the book

**Case Studies in Paleoethnobotany** Deborah Pearsall, 2018-07-06 Case Studies in Paleoethnobotany focuses on interpretation in paleoethnobotany In it the reader is guided through the process of analyzing archaeobotanical data and of using that data to address research questions Part I introduces archaeobotanical remains and how they are deposited preserved sampled recovered and analyzed Five issue oriented case studies make up Part II and illustrate paleoethnobotanical inference and applications A recurrent theme is the strength of using multiple lines of evidence to address issues of significance This book is unique in its explicit focus on interpretation for consumers of paleoethnobotanical knowledge Paleoethnobotanical inference is increasingly sophisticated and contributes to our understanding of the past in ways that may not be apparent outside the field or to all practitioners The

case study format allows in depth exploration of the process of interpretation in the context of significant issues that will engage readers No other work introduces paleoethnobotany and illustrates its application in this way This book will appeal to students interested in ancient plant people interrelationships as well as archaeologists paleoethnobotanists and paleoecologists The short methods chapters and topical case studies are ideal for instructors of classes in archaeological methods environmental archaeology and ethnobiology

Head, 2004 This volume explores geological boundaries in time and space using palynology and micropalaeontology Boundaries produce distinct signatures in the micropalaeontological record They can tell us much about the response of biotic systems to environmental change in both marine and terrestrial realms Different microfossil groups and geological contexts require their own approaches definitions and considerations of boundaries The papers here cover the methodology of boundary identification from biostratigraphical ecological and palaeoenvironmental perspectives

**Dynamics of Multiscale Earth Systems** Horst J. Neugebauer, Clemens Simmer, 2008-01-26 In many aspects science becomes conducted nowadays through technology and preferential criteria of economy Thus investigation and knowledge is evidently linked to a specific purpose Especially Earth science is confronted with two major human perspectives concerning our natural environment sustainability of resources and assessment of risks Both aspects are expressing urgent needs of the living society but in the same way those needs are addressing a long lasting fundamental challenge which has so far not been met Following on the patterns of economy and technology the key is presumed to be found through a development of feasible concepts for a management of both our natural environment and in one or the other way the realm of life Although new techniques for observation and analysis led to an increase of rather specific knowledge about particular phenomena yet we fail now even more frequently to avoid unforeseen implications and sudden changes of a situation Obviously the improved technological tools and the assigned expectations on a management of nature still exceed our traditional scientific experience and accumulated competence Earth and Life Sciences are nowadays exceedingly faced with the puzzling nature of an almost boundless network of relations i.e. the complexity of phenomena with

respect to their variability The disciplinary notations and their particular approaches are thus no longer accounting sufficiently for the recorded context of phenomena for their permanent variability and their unpredictable implications The large environmental changes of glacial climatic cycles for instance demonstrate this complexity of such a typical phenomenology

**Paleoethnobotany** Deborah M. Pearsall, 2013-10-22 This book describes the approaches and techniques of paleoethnobotany the study of the interrelationships between human populations and the plant world through the archaeological record Its purpose is twofold First it assembles in one volume the three major methods of paleoethnobotany the analysis of macroremains pollen analysis and phytolith analysis for the student or professional interested in the field Second it presents on paleoethnobotanist's view of the discipline its past present and future its strengths and weaknesses and its role in modern archaeology A comprehensive reference work for archaeologists and paleobotanists interested in reconstructing interrelationships between humans and plants from the archaeological record The first general of work theory and methods to emerge from this subdiscipline which has developed during the past twenty years Makes the approaches and techniques of this field more accessible to the general anthropological and botanical audiences Offers archaeologists a handbook of field sampling and flotation techniques as well as an introduction to methods of analysis and interpretation in paleoethnobotany

book presents state of the art research projects and opinions on using paleolimnology for lake restoration and management It illustrates the general idea that proposing adequate restoration and management solutions must be based on the past Knowing the natural and anthropic variations a water body went through defines the best ways for maintaining or restoring an ecosystem By quantifying baseline conditions paleolimnology provides a definite plan for restoration and management This cannot be achieved without studying the past
