Teaching Pearls in Noninvasive Mechanical Ventilation Antonio M. Esquinas,2022-02-01 This book uses real world clinical case analyses of hot topics to provide insights into noninvasive mechanical ventilation NIV Written by leading international teachers and experts it features a selection of major controversial topics in clinical practice and demonstrates how these cases can be used to teach about NIV It then presents a discussion of the topics in various scenarios anesthesiology critical care emergency pneumology and sleep medicine as well The chapters allow readers to develop a case by case understanding of NIV in acute and chronic respiratory disorders and perioperative and in intensive care patients also thanks to Electronic Supplementary Materials Lastly the authors summarize five key points recommendations This book is an attractive resource also for universities educational seminars national and international postgraduate courses and hot topics sessions at national international congresses **The Neurosciences and the Practice of Aviation Medicine** Anthony N. Nicholson,2017-03-02 This book brings the neurosciences to operational and clinical aviation medicine It is concerned with the physiology and pathology of circadian rhythmicity orientation hypotension and hypoxia and with disorders of the central nervous system relevant to the practice of aviation medicine The chapters on circadian rhythmicity and orientation deal with the impaired alertness and sleep disturbance associated with desynchrony and with the effects of linear and angular accelerations on spatial awareness Hypotension and hypoxia cover cerebral function during increased gravitational stress clinical aspects of exposure to acute hypoxia the mild hypoxia of the cabin of transport aircraft adaptation and

acclimatization to altitude and decompression at extreme altitudes and in space Disorders of particular significance to the practice of aviation medicine such as excessive daytime sleepiness epilepsy syncope hypoglycaemia headache and traumatic brain injury are covered while neuro ophthalmology the vestibular system and hearing also receive detailed attention The potentially adverse effects of the aviation environment and of disorders of the nervous system are brought together and the text covers the neurological examination as it relates to aircrew and explores current management and therapeutics The Neurosciences and the Practice of Aviation Medicine is an essential work for those involved in the practice of aviation medicine where familiarity with the effects of the aviation environment on the nervous system and understanding the pathophysiology of relevant clinical disorders are of prime concern The authors from leading centres of excellence are physiologists concerned with the aviation environment and physicians involved in the day to day practice of medicine They bring to this authoritative text wide experience and expertise in both the experimental and clinical neurosciences

Applied Respiratory Physiology John F

Nunn, 2013-10-22 Applied Respiratory Physiology Third Edition focuses on the applications of respiratory physiology and is designed to bridge the gap between applied respiratory physiology and the treatment of patients. This book is divided into two parts: the first of which is confined to general principles and the second deals with the various applied situations. This text is comprised of 29 chapters. After giving a general introduction to human respiratory physiology including the functional anatomy of the respiratory tract, this book turns to the topic of the elastic resistance afforded by lungs and chest wall along with its effect on the resting end expiratory lung volume or functional residual capacity. The role of anesthesia in the control of breathing and the relative distribution of ventilation and perfusion are then examined. The section on artificial ventilation covers the techniques of ventilation and extracorporeal gas exchange. The reader is also introduced to special forms of lung pathology that have a major effect on lung function including the adult respiratory distress syndrome, pulmonary oedema, embolus and collapse. Sleep, smoking, diving and drowning are also examined in this book. In addition, this text provides substantial coverage of exercise, high altitude, children and neonates. This book will be of interest to clinicians and practitioners of applied respiratory physiology.

Anesthesia and the Lung T.H. Stanley, R.J. Sperry, 2012-12-06 Theodore H Stanley M D. Anesthesia and the Lung contains the Refresher Course manuscripts of the presentations of the 34th Annual Postgraduate Course in Anesthesiology which took place at The Cliff Conference Center in Snowbird, Utah, February 17-21, 1989. The chapters reflect recent advances in the diagnosis, pre-intra and postoperative anesthetic management of patients with lung disease presenting for pulmonary and non-pulmonary surgery. They also deal with ventilation-perfusion issues, the lung as a metabolic organ, the effects of anesthesia on pulmonary mechanics and pulmonary blood flow. In addition, there are chapters that will focus around hypoxia, regional differences in the lung, pulmonary surfactant, recent advances in the understanding of pulmonary edema, high altitude disease, anesthesia and the control of breathing, recent developments in oximetry, instrumentation designed to measure pulmonary oxygen tension (P_O) and PCO₂ transcutaneously, differential lung ventilation, reactive airways, septic shock, the adult respiratory distress syndrome and numerous aspects of ventilatory support. The purposes of the textbook are to 1) act as a reference for the anesthesiologists attending the meeting and 2) serve as a vehicle to bring many of the latest concepts in anesthesiology to others within a short time of the formal presentation. Each chapter is a brief but sharply focused glimpse of the interests in anesthesia expressed at the conference.
