International Review of Research in Mental Retardation Philip W. Davidson, Gary J. Myers, Bernard Weiss, 2005-12-09 Neurotoxicity and Developmental Disabilities is a comprehensive review of the relationship between neurotoxicity and mental retardation. Though individual chapters each focus on a specific toxin, the chapters jointly emphasize that many variables influence the developmental outcomes following exposure to neurotoxicants including timing of exposure, pattern of exposure, dose, susceptibility, and environmental conditions. Coverage includes the developmental consequences of maternal exposure to methyl mercury and direct exposure to PCBs and Dioxins, lead, methanol, parental smoking, phthalates, and pesticides. Additional chapters review research on environmental agents and autism and assessment studies of exposure. This thematic volume in the International Review of Research in Mental Retardation begins with forewords by Stephen R. Schroeder and series editor Laraine Glidden.

Prostate Cancer R. Hofmann, Axel Heidenreich, Judd W. Moul, 2012-12-06 Prostate cancer is not only the most common genitourinary tumor but according to the tumor registry of Munich, the male tumor with the highest incidence. The wide range of information concerning this important disease has been dealt with comprehensively. In a time when interested urologists can surf the internet to find an article they are looking for, they usually get lost because of the flood of papers covering the same subject. Furthermore, they are still alone in deciding which scientific contribution to believe and which will serve their patients best. A well-edited book such as this, however, provides quick access to all pertinent questions. These renowned authors have taken on the responsibility of writing a balanced report and producing a sort of a guideline, i.e. a diagnostic or therapeutic standard. The editors are to be congratulated on mastering such a formidable task, bringing together the leading names in prostate cancer to present their views on all the questions one might have about this disease. I trust that this book will serve urologists in practice and their patients well.

Blaming Mothers Linda C. Fentiman, 2019-05-01 A gripping explanation of the biases that lead to the blaming of pregnant women and mothers Are mothers truly a danger to their children's health In 2004 a mentally disabled young woman in Utah was charged by prosecutors with murder after she declined to have a Caesarian section and subsequently delivered a stillborn child In 2010 a pregnant woman who attempted suicide when the baby's father abandoned her was charged with murder and attempted feticide after the daughter she delivered prematurely died These are just two of the many cases that portray mothers as the major source of health risk for their children The American legal system is deeply shaped by unconscious risk perception that distorts core legal principles to punish mothers who fail to protect their children In *Blaming Mothers* Professor Fentiman explores how mothers became legal targets She explains the psychological processes we use to confront tragic events and the unconscious race class and gender biases that affect our perceptions and influence the decisions of prosecutors judges and jurors Fentiman examines legal actions taken against pregnant women in the name of fetal protection including court ordered C sections and maintaining brain dead pregnant women on life support to gestate

a fetus as well as charges brought against mothers who fail to protect their children from an abusive male partner She considers the claims of physicians and policymakers that refusing to breastfeed is risky to children s health And she explores the legal treatment of lead poisoned children in which landlords and lead paint manufacturers are not held responsible for exposing children to high levels of lead while mothers are blamed for their children s injuries Blaming Mothers is a powerful call to reexamine who and what we consider risky to children s health Fentiman offers an important framework for evaluating childhood risk that rather than scapegoating mothers provides concrete solutions that promote the health of all of America s children Read a piece by Linda Fentiman on shaming and blaming mothers under the law on The Gender Policy Report
