Slifer, 2013-12-01 How adults can help children cope with routine and traumatic medical care Keith J Slifer a pediatric psychologist at the Kennedy Krieger Institute and the

Johns Hopkins University School of Medicine explores how adults can help children cope with routine and traumatic medical care. He draws on practice and research to help health care practitioners provide better care for children with chronic conditions and children undergoing rehabilitation after traumatic injury or surgery. By better understanding the behavior, emotions, and developmental challenges of children, health care professionals in practice and in training can solve a range of problems from getting a distressed child to cooperate with a physical examination or diagnostic test to teaching a child to adhere to medical self care. More than 9 million children in the United States regularly visit health care professionals for treatment of chronic or recurrent health conditions. These children experience multiple doctors' visits, trips to the emergency department, hospital admissions, anesthesia, surgery, medications, needle sticks, wound cleaning, seizures, nausea, vomiting, pain, and fear. While most of these children are developing typically in terms of their intellectual and cognitive functioning, many children with intellectual, developmental, and physical disabilities also require frequent medical care, and as chronic health conditions increase, so do the chances of having developmental, learning, emotional, and behavioral problems. A Clinician's Guide to Helping Children Cope and Cooperate with Medical Care will benefit health care professionals and children as practitioners aim both to improve medical care and to prevent the children's behavior from disrupting clinics and distressing and frustrating health care workers and family caregivers. This book is for pediatric psychologists, pediatricians, family medicine practitioners, physician's assistants, nurse specialists, pediatric subspecialists, and students in these fields and for family members dedicated to helping their children cope with medical procedures and to getting the best possible medical care.

Pediatric Psycho-oncology Shulamith Kreitler, Myriam Weyl Ben-Arush, Andrés Martín, 2012-07-02. Like the groundbreaking first edition, *Pediatric Psycho-oncology* Second edition puts the child at the centre of medical and psychological care. It broadens the focus beyond treatment and cure to consider the quality of life of the child and their family. Written by an international group of pediatric oncologists and psychologists, *psycho-oncologists* brought together by an expert editorial team, it focuses on the real-life practical aspects of children undergoing treatment for cancer. This edition has been restructured and opens with a major section on Active treatment which includes chapters addressing quality of life, pain, psychosocial aspects of treatment and interventions, art therapy, and different fantasy-based techniques, palliative care, communication and education, as well as a new chapter on psychopharmacology. Shorter sections then discuss survivorship and care of the dying child, including a new chapter on bereavement. The final section comprises new chapters on ethical considerations and on addressing the emotional needs of children whose parents have cancer, as well as a case study on international collaboration. An appendix provides a comprehensive overview of tools for evaluation and assessment in pediatric psycho-oncology. This book is a highly practical resource that will be invaluable for all health care professionals looking after children and adolescents with cancer.
