**Consumer-Centered Computer-Supported Care for Healthy People** H.-A. Park, P.J. Murray, C. Delaney, 2006-06. This publication initiated by the Korean Society of Medical Informatics (KOSMI) and its Nursing Informatics Specialist Group and the Special Interest Group in Nursing Informatics of the International Medical Informatics Association (IMIA). NI is published for nurses and informatics experts working with informatics applications in nursing care administration research and education, bringing together the worlds of nursing informatics community. Korea is well known for having the highest level of Information and Communication Technology (ICT) accessibility in the world. Advances in ICT in Korea have led Korean health care sectors to fully utilize the benefit of ICT for health care. The theme of the book **Consumer-Centered Computer-Supported Care for Healthy People** emphasizes the central role of the consumer and the function of information technology in health care. It reflects the major challenge in our time which is developing and using information technology for the improvement of consumer-oriented health care. I would seriously recommend that this book in text form should be available in all nursing libraries as a resource for study and reference in the expanding area of nursing and health care.

**Computational Intelligence in Theory and Practice** Bernd Reusch, Karl-Heinz Temme, 2001-01-18. Computational Intelligence with its roots in Fuzzy Logic, Neural Networks, and Evolutionary Algorithms has become an important research and application field in computer science in the last decade. Methodologies from these areas and combinations of them enable users from engineering, business, medicine, and many more branches to capture and process vague, incomplete, uncertain, and imprecise data and knowledge. Many algorithms and tools have been developed to solve problems in the realms of high and low level control, information processing, diagnostics, decision support, classification, optimisation, and many more. This book tries to show the impact and feedback between theory and applications of Computational Intelligence, highlighted on selected examples.

Sosa-Iudicissa, 1998 According to one of the numerous definitions of telemedicine providing medicine at a distance any doctor being trained in the use of some telematic devices could effort that practice The reality is far from this because to assure a safe practice people have to learn and bear a minimum understanding of a wide range of topics from economics to telecommunications and from medicine to legal aspects Technology learning is not limited to technology itself but linked to its social practical consequences in all their aspects To guarantee that none of the aspects related with telemedicine are missed this minimum knowledge has to be fixed organised and in some way standardised The main purpose of this book is to structure the basic knowledge linked to teaching to provide or practising telemedicine as well as an overview of the technology developments linked to this new discipline As expressed in the title the book is precisely structured as a handbook the only existing one whose main value is the joint opinion of all the participating authors of what are the minimum teaching requirements for anyone that would like to learn telemedicine It is not a full treatise nor a complete recollection of all

telemedicine applications or telemedicine basics It was built with the aim of creating awareness to the academic authorities and health care community representatives on the fact that telemedicine practices in any of their aspects technology development telecommunications approach law and regulations medical practice require a minimum knowledge that has to be respected in order to guarantee safe and appropriate medical practice Nowadays this fact is enhanced by the evidence that welfare expenses cannot be endlessly increased whilst an efficient health provision system in the context of the information society will mark a new trend to configure health care practice in the next century If training and teaching schemes are to cope with the demands of society it seems obvious that those careers and professions that are purvey to the Body of Knowledge BoK of telemedicine should consider structured and sufficient training in telemedicine *User Acceptance of Health Telematics Applications* Ilias Iakovidis, Stavroula Maglaveras, Antonios Trakatellis, 2000 Health Telematics Applications and User Acceptance from a Medical Student's point of view Author Index Mathematical Modelling in Medicine Johnny T.
