

# Textured Modified Diets

"Dysphagia is when an individual has difficulty swallowing making it hard for them to eat and drink. Their food and drink may need to be modified to make it safer and minimising the risk of choking and aspiration."

## The Modified Food Groups

### Liquidised

All food items should be prepared separately. It should be completely smooth, passed through a sieve and lump free with a moderately thick liquid consistency. No thin liquid should separate.

### Pureed

Food should be smooth, without lumps or separated liquid. It should hold its shape on a spoon and be a mousse like consistency. Extra gravy or sauce should not be added.

### Minced and Moist

Food particles should be no bigger than 3mm. Tender and moist with a fine minced consistency with no separated liquid. Extra gravy or sauce should not be added.

### Soft and -Sized

Food particles should be no bigger than 15mm x 15mm and soft enough to press down with a fork without regaining shape. Gravy or sauce should be bound within the dish and not served separately.

### Easy to Chew

Age appropriate foods that are a soft/tender texture that can be cut with a fork or spoon. No hard, tough, stringy textures with pips, seeds bones or grits.

### Regular

Everyday foods of different textures. Chewing required, includes mixed consistencies e.g. cereal with milk, soup with vegetables & sandwiches.

Ingredients to avoid in Levels 3-7 Easy to Chew.

Foods with husks, seeds, pips or fibrous textures. No hard, crunchy or sticky textures. If in doubt pass ingredients through a fine sieve and thicken to correct consistency.

**Nutrition and Fitness: Diet, Genes, Physical Activity and Health** A. P. Simopoulos, K. N. Pavlou, Berthold Koletzko, 2001-07 This is the first of two volumes containing the proceedings of the Fourth International Conference on Nutrition and Fitness It presents the latest data on the interrelationships of genes nutrients and physical activity as they influence the phenotype throughout development The human genome was shaped by the environment especially diet and physical activity The phenotype is thus the result of continuous gene environment interactions However new data indicate that the environment has changed enormously especially during the last 100 years so that it is no longer in harmony with the human genome A new discipline is evolving called Nutrigenetics which combines concepts and methods from genetics and nutritional sciences and the term refers to individual variability in response to diet The papers presented make it abundantly clear that we must make a conscious effort to develop in all dimensions the environment particularly diet and physical activity in which the human genome finds its optimal expression This approach of individualized environmental modification is called Euphenics and it must evolve simultaneously with Genomics and the use of genotypic analyses to enhance the quality of medical care for the individual The euphenic approach is essential for the prevention and management of chronic disease These proceedings will be of interest to geneticists nutritionists and dietitians exercise physiologists anthropologists psychologists and psychiatrists pediatricians internists general practitioners health care providers scientists in government and industry policymakers and governmental organizations
