**Outpatient Nutrition Care and Home Nutrition Support** Carol Ireton-Jones, 2016-08-05 Nutrition defined by Merriam Webster is the process of eating the right kind of food so you can grow properly and be healthy. However, making the right food and nutrition choices and finding the best and most accurate nutrition information can be a challenge, especially when a disease or injury is present. There are a wide range of ways that nutrition can be healing from a simple broth that provides fluids and electrolytes to therapeutic nutrition for diabetes, irritable bowel syndrome, or osteoporosis. Registered Dietitian Nutritionists (RDN) have expertise in disease management and translation of nutrition requirements to foods to consume. However, nutrition care often does not receive the attention in the outpatient setting that is needed to achieve nutrition goals. The purpose of this book is to provide pertinent and concise nutrition care information for Registered Dietitian Nutritionists and other professionals working with individuals outside of the hospital, including nurses, pharmacists, and physicians. This book covers screening, assessing, and treating malnutrition in outpatient nutrition care in diabetes, cardiovascular disease, gastrointestinal disease, osteoporosis, and home enteral and parenteral nutrition. In each chapter, the reader will learn more about the disease process as well as the management of the disease or therapy. As the number of patients receiving home care nutrition support increases, proper assessment and management of this therapy is crucial, and clinicians need to practice at an advanced level. This book presents advanced and readily applicable information on proper nutrition care of individuals in the outpatient setting and those receiving home nutrition support.

Clinically oriented, **Advanced Nutrition and Dietetics in Nutrition Support** is the ideal reference for all those managing undernutrition in a range of clinical areas.

**IGF and Nutrition in Health and Disease** M. Sue Houston, Jeffrey M. P. Holly, Eva L. Feldman, 2004-08-04 A benchmark review on how specific nutrients or adverse nutritional states impact the components of the IGF (Insulin-like Growth Factor) system and affect human health and disease. The authors describe the fundamentals of the IGF system, explain its basic mechanisms of action, illuminate its essential role in physical development across the life span, and highlight the link between normal and abnormal cellular growth resulting in tumor formation. They also fully examine the clinical aspects of nutrition and IGF from pre- and postnatal development through old age in the maintenance of normal metabolism, bone and muscle health, and their role in pathological states. Special attention is given to critical illness, diabetes, gastrointestinal diseases, kidney failure, endocrine dysfunctions, cardiovascular disease, neurological disorders, and cancer, as well as to their potential for IGF therapy.
