

21 Developing Behavior Change Interventions

Nelli Hankonen and Wendy Hardeman

Practical Summary

When trying to help people change behavior, it is important that intervention designers consider carefully what actions might bring about the desired outcomes and why. A systematic approach to intervention development aids this process. Key tasks are (1) identify and analyze the problem addressed by the intervention; (2) identify how the intervention will achieve the desired outcomes, decide on its content and delivery mode(s), and design a logic model or program theory; (3) develop intervention materials or prototypes (e.g., interface); and (4) test or pilot the intervention iteratively in an early stage. This approach can be adopted to develop new interventions and to optimize existing interventions. It is useful to build an explicit model of assumed influences of an intervention during its design, including influences on behavior, contextual influences on implementation, and the causal pathway involved. The decisions about intervention content and delivery modes are informed by an understanding of the target group, behaviors, context, and working mechanisms of behavior change techniques.

21.1 Introduction

Intervention development is an essential process in which several parties work together to produce an intervention that is fit-for-purpose and likely to be effective in changing the behavior of the target population. Parties involved are likely to include practitioners, researchers, the target group, and other stakeholders (see also Chapters 24 and 25, this volume). The scope of development work is influenced by the available time and resources. The aim of this chapter is to provide an overview of the basic steps in the intervention development process. The chapter shows how careful development helps ensure that the intervention is (1) informed by evidence from multiple sources (e.g., the research literature, the target group or population, stakeholders, relevant theory); (2) that the intervention is an appropriate solution to a problem; (3) that

context and any challenges in the implementation of the intervention have been carefully considered and addressed; (4) that feasibility, acceptability, and resource use (value for money) have been considered at an early stage; (5) that the intervention is optimized prior to evaluation; and (6) that the evaluation will focus on key uncertainties about the intervention. A carefully reported development process is also crucial in understanding issues arising from intervention implementation, such as providing insight into what may have gone wrong if the intervention does not achieve stipulated goals or is labeled as “ineffective.” It also provides necessary detail to contribute to the evidence base of behavioral interventions and behavior change theories. The chapter will focus on the development of behavior change interventions across disciplines and

Two Case Studies Scaling Effective School Mental Health Interventions and Practices Lee Kern, Mark D. Weist, Samuel D. McQuillin, 2024-09-30. This book describes key practices to bring school mental health programs to scale in a sustainable and effective manner. It emphasizes practices that facilitate the organization and delivery of evidence-based mental health interventions in schools. The volume addresses systems issues and practices that lay the groundwork for creating sustainable school mental health programs. It explores important considerations at the school, district, and state levels, tiered intervention as a framework to support school mental health, preparing the workforce, resource utilization, and assuring cultural responsiveness and equity for underserved groups of students. In addition, the book focuses on recent and emerging evidence-based practices for practicably scaling school mental health in schools. Chapters examine systematic screening followed by specific interventions, including just-in-time training and single-session interventions. The book concludes with a focus on ways to address systemic barriers to school mental health, such as addressing the mental health of immigrants. Key areas of coverage include: Communities of practice at different levels of scale (e.g., school, building, national); Resource mapping across schools and communities; Screening to match student needs with interventions; Systemic issues in service delivery. *Scaling Effective School Mental Health Interventions and Practices* is a must-have resource for practitioners, clinicians, and mental health therapists, as well as researchers, professors, and graduate students across such interrelated disciplines as school, clinical, and counseling psychology, educational policy, and government relations, social work, public health, family leadership, and advocates, and medicine and allied health professions (e.g., psychiatry, primary care, nursing, speech, and occupational therapy).
