Epidemiologic Studies in Cancer Prevention and Screening Anthony B. Miller, 2012-11-30 Epidemiologic

Studies in Cancer Prevention and Screening is the first comprehensive overview of the evidence base for both cancer prevention and screening. This book is directed to the many professionals in government, academia, public health, and health care who need up-to-date information on the potential for reducing the impact of cancer, including physicians, nurses, epidemiologists, and research scientists. The main aim of the book is to provide a realistic appraisal of the evidence for both cancer prevention and cancer screening. In addition, the book provides an accounting of the extent programs based on available knowledge have impacted populations. It does this through:

1. Presentation of a rigorous and realistic evaluation of the evidence for population-based interventions in prevention of and screening for cancer with particular relevance to those believed to be applicable now or on the cusp of application.
2. Evaluation of the relative contributions of prevention and screening.
3. Discussion of how, within the health systems with which the authors are familiar, prevention and screening for cancer can be enhanced.

Overview of the evidence base for cancer prevention and screening as demonstrated in *Epidemiologic Studies in Cancer Prevention and Screening* is critically important given current debates within the scientific community. Of the five components of cancer control—prevention, early detection, including screening, treatment, rehabilitation, and palliative care—prevention is regarded as the most important. Yet the knowledge available to prevent many cancers is incomplete, and even if we know the main causal factors for a cancer, we often lack the understanding to put this knowledge into effect. Further, with the long natural history of most cancers, it could take many years to make an appreciable impact upon the incidence of the cancer. Because of these facts, many have come to believe that screening has the most potential for reduction of the burden of cancer. Yet, through trying to apply the knowledge gained on screening for cancer, the scientific community has recognized that screening can have major disadvantages and achieve little at substantial cost. This reduces the resources that are potentially available both for prevention and for treatment.

Advances in Breast Cancer Management, 2nd edition William J. Gradishar, William C. Wood, 2000-08-31

The optimal management of breast cancer patients relies on the expertise of a team of medical specialists, including radiologists, surgeons, radiation therapists, and medical oncologists. Much of the progress in breast cancer management made over the last several years reflects the translation of observations made in the laboratory to the clinic. Critically evaluating the impact of new treatment approaches relies on a commitment to well-designed clinical trials. In this volume, *Advances in Breast Cancer Management*, a renowned group of breast cancer experts have been asked to provide their perspective on management issues that directly affect patients on a day-to-day basis. Dr. Melody Cobleigh discusses the consequences of estrogen deprivation and the ways of ameliorating secondary symptoms and the potential long-term morbidity. Drs. Haigh and Giuliano review the sentinel lymph node biopsy technique, including results from their extensive experience. Dr. Abram Recht places into perspective the potential benefit of post-mastectomy radiotherapy and reviews recent trials that address this issue. Dr. Dennis Slamon takes from us, from the laboratory to the clinic, in explaining the development of Herceptin as a paradigm for therapy targeted to specific

molecular characteristics of breast cancer tumor cells Drs Nieto Shpall Crump and Pritchard offer different perspectives on the future of high dose chemotherapy with stem cell transplantation as a treatment for breast cancer patients Drs
