Quasiprojective Moduli For Polarized Manifolds:

Quasi-projective Moduli for Polarized Manifolds Eckart Viehweg,2012-12-06 The concept of moduli goes back to B Riemann who shows in 68 that the isomorphism class of a Riemann surface of genus 9 2 depends on 3g 3 parameters which he proposes to name moduli A precise formulation of global moduli problems in algebraic geometry the definition of moduli schemes or of algebraic moduli spaces for curves and for certain higher dimensional manifolds have only been given recently A Grothendieck D Mumford see 59 as well as solutions in some cases It is the aim of this monograph to present methods which allow over a field of characteristic zero to construct certain moduli schemes together with an ample sheaf Our main source of inspiration is D Mumford s Geometric In variant Theory We will recall the necessary tools from his book 59 and prove the Hilbert Mumford Criterion and some modified version for the stability of points under group actions As in 78 a careful study of positivity proper ties of direct image sheaves allows to use this criterion to construct moduli as quasi projective schemes for canonically polarized manifolds and for polarized manifolds with a semi ample canonical sheaf **Quasi-Projective Moduli for Polarized Manifolds** Eckart Viehweg,1995-07-24 *Higher Dimensional Complex Varieties* Marco Andreatta,Thomas Peternell,2011-07-20 No detailed description available for Higher Dimensional Complex Varieties **Geometry of Algebraic Curves** Enrico Arbarello,Maurizio Cornalba,Phillip Griffiths,2011-03-10 The second volume of the Geometry of Algebraic Curves is devoted to the foundations of the theory of moduli of algebraic curves Its authors are research mathematicians who have actively participated in the development of the Geometry of Algebraic Curves The subject is an extremely fertile and active one both within the mathematical community and at the interface with the theoretical physics community The approach is unique in its blending of algebro geometric complex analytic and topological combinatorial methods It treats important topics such as Teichm ller theory the cellular decomposition of moduli and its consequences and the Witten conjecture The careful and comprehensive presentation of the material is of value to students who wish to learn the subject and to experts as a reference source The first volume appeared 1985 as vol 267 of the same series *Compact Complex Surfaces* W. Barth,K. Hulek,Chris Peters,A.van de Ven,2015-05-22 In the 19 years which passed since the first edition was published several important developments have taken place in the theory of surfaces The most sensational one concerns the differentiable structure of surfaces Twenty years ago very little was known about differentiable structures on 4 manifolds but in the meantime Donaldson on the one hand and Seiberg and Witten on the other hand have found inspired by gauge theory totally new invariants Strikingly together with the theory explained in this book these invariants yield a wealth of new results about the differentiable structure of algebraic surfaces Other developments include the systematic use of nef divisors in ac cordance with the progress made in the classification of higher dimensional algebraic varieties a better understanding of Kahler structures on surfaces and Reider s new approach to adjoint mappings All these developments have been incorporated in the present edition though the Donaldson and Seiberg Witten theory only by way of

examples Of course we use the opportunity to correct some minor mistakes which we ether have discovered ourselves or which were communicated to us by careful readers to whom we are much obliged *A Celebration of Algebraic Geometry* Brendan Hassett,James McKernan,Jason Starr,Ravi Vakil,2013-09-11 This volume resulted from the conference A Celebration of Algebraic Geometry which was held at Harvard University from August 25 28 2011 in honor of Joe Harris 60th birthday Harris is famous around the world for his lively textbooks and enthusiastic teaching as well as for his seminal research contributions The articles are written in this spirit clear original engaging enlivened by examples and accessible to young mathematicians The articles in this volume focus on the moduli space of curves and more general varieties commutative algebra invariant theory enumerative geometry both classical and modern rationally connected and Fano varieties Hodge theory and abelian varieties and Calabi Yau and hyperk hler manifolds Taken together they present a comprehensive view of the long frontier of current knowledge in algebraic geometry Titles in this series are co published with the Clay Mathematics Institute Cambridge MA **Introduction to the Mori Program** Kenji Matsuki,2013-04-17 Mori s Program is a fusion of the so called Minimal Model Program and the IItaka Program toward the biregular and or birational classification of higher dimensional algebraic varieties The author presents this theory in an easy and understandable way with lots of background motivation Prerequisites are those covered in Hartshorne s book Algebraic Geometry This is the first book in this extremely important and active field of research and will become a key resource for graduate students wanting to get into the area **Integrability, Quantization, and Geometry: II. Quantum Theories and Algebraic Geometry** Sergey Novikov,Igor Krichever,Oleg Ogievetsky,Senya Shlosman,2021-04-12 This book is a collection of articles written in memory of Boris Dubrovin 1950 2019 The authors express their admiration for his remarkable personality and for the contributions he made to mathematical physics For many of the authors Dubrovin was a friend colleague inspiring mentor and teacher The contributions to this collection of papers are split into two parts Integrable Systems and Quantum Theories and Algebraic Geometry reflecting the areas of main scientific interests of Dubrovin Chronologically these interests may be divided into several parts integrable systems integrable systems of hydrodynamic type WDVV equations Frobenius manifolds isomonodromy equations flat connections and quantum cohomology The articles included in the first part are more or less directly devoted to these areas primarily with the first three listed above The second part contains articles on quantum theories and algebraic geometry and is less directly connected with Dubrovin s early interests *Geometric Invariant Theory and Decorated Principal Bundles* Alexander H. W. Schmitt,2008 The book starts with an introduction to Geometric Invariant Theory GIT The fundamental results of Hilbert and Mumford are exposed as well as more recent topics such as the instability flag the finiteness of the number of quotients and the variation of quotients In the second part GIT is applied to solve the classification problem of decorated principal bundles on a compact Riemann surface The solution is a quasi projective moduli scheme which parameterizes those objects that satisfy a semistability condition originating from gauge

theory The moduli space is equipped with a generalized Hitchin map Via the universal Kobayashi Hitchin correspondence these moduli spaces are related to moduli spaces of solutions of certain vortex type equations Potential applications include the study of representation spaces of the fundamental group of compact Riemann surfaces The book concludes with a brief discussion of generalizations of these findings to higher dimensional base varieties positive characteristic and parabolic bundles The text is fairly self contained e g the necessary background from the theory of principal bundles is included and features numerous examples and exercises It addresses students and researchers with a working knowledge of elementary algebraic geometry   *Snowbird Lectures in Algebraic Geometry* Ravi Vakil,2005 A significant part of the 2004 Summer Research Conference on Algebraic Geometry Snowbird UT was devoted to lectures introducing the participants in particular graduate students and recent Ph D s to a wide swathe of algebraic geometry and giving them a working familiarity with exciting rapidly developing parts of the field One of the main goals of the organizers was to allow the participants to broaden their horizons beyond the narrow area in which they are working A fine selection of topics and a noteworthy list of contributors made the resulting collection of articles a useful resource for everyone interested in getting acquainted with the modern topic of algebraic geometry The book consists of ten articles covering among others the following topics the minimal model program derived categories of sheaves on algebraic varieties Kobayashi hyperbolicity groupoids and quotients in algebraic geometry rigid analytic varieties and equivariant cohomology Suitable for independent study this unique volume is intended for graduate students and researchers interested in algebraic geometry   **Proceedings Of The International Congress Of Mathematicians 2010 (Icm 2010) (In 4 Volumes) - Vol. I: Plenary Lectures And Ceremonies, Vols. Ii-iv: Invited Lectures** Rajendra Bhatia,Arup Pal,G Rangarajan,V Srinivas,M Vanninathan,2011-06-06 ICM 2010 proceedings comprises a four volume set containing articles based on plenary lectures and invited section lectures the Abel and Noether lectures as well as contributions based on lectures delivered by the recipients of the Fields Medal the Nevanlinna and Chern Prizes The first volume will also contain the speeches at the opening and closing ceremonies and other highlights of the Congress   Hodge Theory and Complex Algebraic Geometry II: Volume 2 Claire Voisin,2003-07-03 The 2003 second volume of this account of Kaehlerian geometry and Hodge theory starts with the topology of families of algebraic varieties Proofs of the Lefschetz theorem on hyperplane sections the Picard Lefschetz study of Lefschetz pencils and Deligne theorems on the degeneration of the Leray spectral sequence and the global invariant cycles follow The main results of the second part are the generalized Noether Lefschetz theorems the generic triviality of the Abel Jacobi maps and most importantly Nori s connectivity theorem which generalizes the above The last part of the book is devoted to the relationships between Hodge theory and algebraic cycles The book concludes with the example of cycles on abelian varieties where some results of Bloch and Beauville for example are expounded The text is complemented by exercises giving useful results in complex algebraic geometry It will be welcomed by researchers in both algebraic and differential geometry

Convex and Complex: Perspectives on Positivity in Geometry Robert J. Berman,Yanir A. Rubinstein,2025-01-28 This volume presents a collection of research articles arising from the conference on Convex and Complex Perspectives on Positivity in Geometry held in Cetraro Italy from October 31 November 4 2022 The conference celebrated the 70th birthday of Bo Berndtsson and the vitality of current research across complex and convex geometry as well as interactions between the two areas all united by the overarching concept of positivity Positivity plays a central role in complex and convex geometry It arises from a range of complementary perspectives as illustrated by the breadth of the papers appearing in this volume including existence K hler Einstein edge metrics Santal type inequalities curvature of direct images of bundles extension theorems for holomorphic functions optimal transport and Hessian manifolds interpolation and Brunn Minkowski theory and non Archimedean geometry The format of the workshop was innovative compared to standard conferences in mathematics with focused 30 minute talks aimed at stimulating lively discussions and a flipped classroom where the audience becomes more engaged and the speaker is not expected to transmit more information than listeners can possibly absorb Lengthy breaks between talks and a relatively small number of talks allowed for useful time blocks for collaboration This volume reflects the spirit of the conference showcasing the vitality of current research in these areas as well as the profound impact of Bo Berndtsson s contributions to the field **Optical Characterization of Epitaxial Semiconductor Layers** Günther Bauer,Wolfgang Richter,2012-12-06 The characterization of epitaxial layers and their surfaces has benefitted a lot from the enormous progress of optical analysis techniques during the last decade In particular the dramatic improvement of the structural quality of semiconductor epilayers and heterostructures results to a great deal from the level of sophistication achieved with such analysis techniques First of all optical techniques are nondestructive and their sensitivity has been improved to such an extent that nowadays the epilayer analysis can be performed on layers with thicknesses on the atomic scale Furthermore the spatial and temporal resolution have been pushed to such limits that real time observation of surface processes during epitaxial growth is possible with techniques like reflectance difference spectroscopy Of course optical spectroscopies complement techniques based on the inter action of electrons with matter but whereas the latter usually require high or ultrahigh vacuum conditions the former ones can be applied in different environments as well This advantage could turn out extremely important for a rather technological point of view i e for the surveillance of modern semiconductor processes Despite the large potential of techniques based on the interaction of electromagnetic waves with surfaces and epilayers optical techniques are apparently moving only slowly into this area of technology One reason for this might be that some prejudices still exist regarding their sensitivity **Cartesian Currents in the Calculus of Variations II** Mariano Giaquinta,Guiseppe Modica,Jiri Soucek,2013-03-14 Non scalar variational problems appear in different fields In geometry for in stance we encounter the basic problems of harmonic maps between Riemannian manifolds and of minimal immersions related questions appear in physics for example in the classical theory of a models Non linear elasticity is another example in

continuum mechanics while Oseen Frank theory of liquid crystals and Ginzburg Landau theory of superconductivity require to treat variational problems in order to model quite complicated phenomena Typically one is interested in finding energy minimizing representatives in homology or homotopy classes of maps minimizers with prescribed topological singularities topological charges stable deformations i e minimizers in classes of diffeomorphisms or extremal fields In the last two or three decades there has been growing interest knowledge and understanding of the general theory for this kind of problems often referred to as geometric variational problems Due to the lack of a regularity theory in the non scalar case in contrast to the scalar one or in other words to the occurrence of singularities in vector valued minimizers often related with concentration phenomena for the energy density and because of the particular relevance of those singularities for the problem being considered the question of singling out a weak formulation or completely understanding the significance of various weak formulations becames non trivial , **Selected Papers** David Mumford,2004-07-15 Mumford is a well known mathematician and winner of the Fields Medal the highest honor available in mathematics Many of these papers are currently unavailable and the commentaries by Gieseker Lange Viehweg and Kempf are being published here for the first time **Algebraic Geometry: Salt Lake City 2015** Tommaso de Fernex,Brendan Hassett,Mircea Mustaţă,Martin Olsson,Mihnea Popa,Richard Thomas,2018-06-01 This is Part 1 of a two volume set Since Oscar Zariski organized a meeting in 1954 there has been a major algebraic geometry meeting every decade Woods Hole 1964 Arcata 1974 Bowdoin 1985 Santa Cruz 1995 and Seattle 2005 The American Mathematical Society has supported these summer institutes for over 50 years Their proceedings volumes have been extremely influential summarizing the state of algebraic geometry at the time and pointing to future developments The most recent Summer Institute in Algebraic Geometry was held July 2015 at the University of Utah in Salt Lake City sponsored by the AMS with the collaboration of the Clay Mathematics Institute This volume includes surveys growing out of plenary lectures and seminar talks during the meeting Some present a broad overview of their topics while others develop a distinctive perspective on an emerging topic Topics span both complex algebraic geometry and arithmetic questions specifically analytic techniques enumerative geometry moduli theory derived categories birational geometry tropical geometry Diophantine questions geometric representation theory characteristic and adic tools etc The resulting articles will be important references in these areas for years to come Deformations of Algebraic Schemes Edoardo Sernesi,2007-04-20 In one sense deformation theory is as old as algebraic geometry itself this is because all algebro geometric objects can be deformed by suitably varying the coef cients of their de ning equations and this has of course always been known by the classical geometers Nevertheless a correct understanding of what deforming means leads into the technically most dif cult parts of our discipline It is fair to say that such technical obstacles have had a vast impact on the crisis of the classical language and on the development of the modern one based on the theory of schemes and on cohomological methods The modern point of view originates from the seminal work of Kodaira and Spencer on small

deformations of complex analytic manifolds and from its for lization and translation into the language of schemes given by Grothendieck I will not recount the history of the subject here since good surveys already exist e g 27 138 145 168 Today while this area is rapidly developing a self contained text covering the basic results of what we can call classical deformation theory seems to be missing Moreover a number of technicalities and well known facts are scattered in a vast literature as folklore sometimes with proofs available only in the complex analytic category This book is an attempt to ll such a gap at least p tially **Complex and Differential Geometry** Wolfgang Ebeling,Klaus Hulek,Knut Smoczyk,2011-06-27 This volume contains the Proceedings of the conference Complex and Differential Geometry 2009 held at Leibniz Universit t Hannover September 14 18 2009 It was the aim of this conference to bring specialists from differential geometry and complex algebraic geometry together and to discuss new developments in and the interaction between these fields Correspondingly the articles in this book cover a wide area of topics ranging from topics in classical algebraic geometry through complex geometry including holomorphic symplectic and poisson geometry to differential geometry with an emphasis on curvature flows and topology
