## **Quaternary Tectonics Of Utah With Emphasis On Earthquakehazard Characterization Utah Geological Survey Bulletin 127:**

Quaternary Tectonics of Utah with Emphasis on Earthquake-hazard Characterization Suzanne Hecker, 1993-01-13 This report consolidates and synthesizes information on Quaternary faulting folding and volcanism in Utah and characterizes recent tectonic activity throughout the state The primary purpose is to provide a comprehensive reference on fault specific seismic sources and surface rupture to facilitate the evaluation of earthquake hazards in Utah Two 1 500 000 scale maps show Quaternary tectonic features categorized according to probable ages of most recent surface deformation and ages of volcanic rocks Two appendix tables summarize significant data on the activity of mapped features including ages of surface displacements and volcanism slip rates recurrence intervals displacement amounts and lengths of surface ruptures Good age control and quantitative activity data are available for relatively few tectonic features in Utah and detailed work is needed in many areas of the state 157 pages 2 plates

**Tectonic Geomorphology of Mountains** William B. Bull, 2008-04-15 With a balance of theory and practical applications Tectonic Geomorphology of Mountains is essential reading for research geologists and upper level undergraduate and graduate students in the earth sciences This book describes how tectonic events influence geomorphic processes and explores how landscapes respond to tectonic deformation in the ways in which they are weathered washed and abraded Uses new approaches to enhance theoretical models of landscape evolution and to solve practical problems such as the assessment of earthquake hazards Includes previously unpublished research and theory Examines how to use key landforms as reference levels in changing landscapes estimate rates of mountain range uplift and map seismic shaking caused by prehistorical earthquakes Presents a diverse range of examples from around the world

**Geologic Hazards of Moab-Spanish Valley, Grand County, Utah** Michael D. Hylland, William Mulvey, 2003 Moab Valley and the contiguous Spanish Valley comprise a popular residential and recreational area in east central Utah Geologic processes that created the rugged and scenic landscape of Moab Spanish Valley are still active today and can be hazardous to property and life To address development in areas with geologic hazards the Utah Geological Survey UGS conducted a geologic hazards investigation to provide information to Moab City and Grand County to help guide development and reduce losses from geologic hazards This report includes maps of Moab Valley and the northern and central parts of Spanish Valley that provide information on geologic hazards to assist homeowners planners and developers in making informed decisions The maps show areas where hazards may exist and where site specific studies are advisable prior to development The maps are for planning purposes only and do not preclude the necessity for site investigations Site specific studies by qualified professionals engineering geologists geotechnical engineers hydrologists should evaluate hazards and if necessary recommend hazard reduction measures Because of the small scale of the maps some hazard areas are not shown hazard studies are therefore recommended for all critical facilities for example hospitals schools fire stations including those outside

the mapped hazard areas      **Geology of Millard County, Utah** Lehi F. Hintze, Fitzhugh D. Davis, 2003 This bulletin serves not only to introduce the non geologist to the rich geology of Millard County but also to provide professional geologists with technical information on the stratigraphy paleontology and structural geology of the county Millard County is unique among Utah's counties in that it contains an exceptionally complete billion year geologic record This happened because until about 200 million years ago the area of present day Millard County lay near sea level and was awash in shallow marine waters on a continental shelf upon which a stack of fossil bearing strata more than 6 miles 10 km thick slowly accumulated This bulletin summarizes what is known about these strata as well as younger rocks and surficial deposits in the county and provides references to scientific papers that describe them in greater detail Mountains North 30 x 60 1 100 000 scale quadrangles These companion maps and this bulletin portray the geology of Millard County more completely and accurately than any previously published work      **I-15 Corridor Utah County to Salt Lake County, Utah and Salt Lake Counties** ,2008

**The Wasatch Fault** Sandra N. Eldredge, 1996-01-22 A beautifully designed and easy to understand publication discussing the geologic history of the Wasatch Fault and possible dangers it poses to anyone living nearby This is a perfect introduction to the fault for anyone of all ages      **National Earthquake Hazards Reduction Program, Annual Project Summaries, XXXVI** ,1995      **Geologic Hazards of Monroe City, Sevier County, Utah** Richard E. Giraud, 2004 Geologic hazards are naturally occurring processes that present a risk to life and property This report provides information for the Monroe City area in Utah's central Sevier Valley to reduce losses from geologic hazards Surficial geologic mapping provides the basis on which individual geologic hazards are identified and mapped Alluvial fan and basin fill deposits cover most of the map area Other deposits consist of colluvium artificial fill spring travertine and volcanic bedrock The geologic hazards maps show where hazards may exist The maps should be used to inform citizens and developers of potential risks and for local government officials to make prudent land use planning decisions The maps are general and site specific studies are needed to demonstrate site suitability prior to development Typical risk reduction methods for these geologic hazards generally include avoidance or engineering design to reduce the risk to an acceptable level      *Bulletin - Utah Geological and Mineral Survey* ,1997      *Paleoseismic Investigation and Long-term Slip History of the Hurricane Fault in Southwestern Utah* William R. Lund, Michael J. Hozik, Stanley C. Hatfield, 2007 This 81 page report presents the results of a study of the Hurricane fault in Utah      **Questar, Williams and Kern River Pipelines Project** ,2001      *Remediation of the Moab Uranium Mill Tailings, Grand and San Juan Counties, Utah* ,2005      **Geology and Geologic Hazards of Tooele Valley and the West Desert Hazardous Industry Area, Tooele County, Utah** Bill D. Black, Barry J. Solomon, Kimm M. Harty, 1999 The petrographic database consists of 705 maceral analyses reflectance measurements and density and porosity determinations from Utah coal samples These data were collected by the Utah Geological Survey from 1982 to 1995 Samples were collected from seven of Utah's 22 coal fields Coal fields sampled are the Book Cliffs 182 samples Wasatch Plateau 262 samples Emery

41 samples Sego 27 samples Henry Mountains 173 samples Kaiparowits Plateau 12 samples and Coalville four samples The data are sorted by coal field names within each field the analyses are arranged alphabetically by coal bed name to facilitate comparison The aim of the database is to provide the industry with information on petrographic properties of Utah coals In addition it should help the coal operators and purchasers to determine the best uses for Utah coals      **Consensus**

**Preferred Recurrence-interval and Vertical Slip-rate Estimates** William R. Lund,2005-06-30 This report presents the results of the Utah Quaternary Fault Parameters Working Group hereafter referred to as the Working Group review and evaluation of Utah s Quaternary fault paleoseismic trenching data The purpose of the review was to 1 critically evaluate the accuracy and completeness of the paleoseismictrenching data particularly regarding earthquake timing and displacement 2 where the data permit assign consensus preferred recurrence interval RI and vertical slip rate VSR estimates with appropriate confidence limits to the faults fault sections under review and 3 identify critical gaps in the paleoseismic data and recommend where and what kinds of additional paleoseismic studies should be performed to ensure that Utah s earthquake hazard is adequately documented and understood It is important to note that with the exception of the Great Salt Lake fault zone the Working Group s review was limited to faults fault sections having paleoseismic trenching data Most Quaternary faults fault sections in Utah have not been trenched but many have RI and VSR estimates based on tectonic geomorphology or other non trench derived studies Black and others compiled the RI and VSR data for Utah s Quaternary faults both those with and without trenches      **Wasatch-Cache and Uinta National Forests (N.F), Snowbird Ski and**
