Quaternary Landscapes Linda C. K. Shane, Edward J. Cushing, National Science Foundation (U.S.). Climate Dynamics Program, University of Minnesota, 1991 **Encyclopedia of Quaternary Science** Cary Mock, 2013-03-25 The second revised edition of the Encyclopedia of Quaternary Science Four Volume Set provides both students and professionals with an up to date reference work on this important and highly varied area of research There are lots of new articles and many of the articles that appeared in the first edition have been updated to reflect advances in knowledge since 2006 when the original articles were written The second edition will contain about 375 articles written by leading experts around the world This major reference work is richly illustrated with more than 3 000 illustrations most of them in colour Research in the Quaternary sciences has advanced greatly in the last 10 years especially since topics like global climate change geologic hazards and soil erosion were put high on the political agenda This second edition builds upon its award winning predecessor to provide the reader assured quality along with essential updated coverage Contains 357 broad ranging articles 4310 pages written at a level that allows undergraduate students to understand the material while providing active researchers with a ready reference resource for information in the field Facilitates teaching and learning The first edition was regarded by many as the most significant single overview of Quaternary science ever yet Editor in Chief Scott Elias has managed to surpass that

in this second edition by securing even more expert reviews whilst retaining his renowned editorial consistency that enables readers to navigate seamlessly from one unfamiliar topic to the next

Landscapes and Societies I. Peter Martini, Ward Chesworth, 2010-11-09

This book contains case histories intended to show how societies and landscapes interact. The range of interest stretches from the small groups of the earliest Neolithic through Bronze and Iron Age civilizations to modern nation states. The coexistence is of its very nature reciprocal, resulting in changes in both society and landscape. In some instances the adaptations may be judged successful in terms of human needs, but failure is common and even the successful cases are ephemeral when judged in the light of history. Comparisons and contrasts between the various cases can be made at various scales from global through inter regional to regional and smaller scales. At the global scale all societies deal with major problems of climate change, sea level rise and with ubiquitous problems such as soil erosion and landscape degradation. Inter regional differences bring out significant detail with one region suffering from drought when another suffers from widespread flooding. For example, desertification in North Africa and the Near East contrasts with the temperate countries of southern Europe where the landscape effects of deforestation are more obvious. And China and Japan offer an interesting comparison from the standpoint of geological hazards to society: large unpredictable and massively erosive rivers in the former case, volcanoes and accompanying earthquakes in the latter. Within the North African region, localized climatic changes led to abandonment of some desertified areas with successful adjustments in others with the ultimate evolution into the formative civilization of Egypt, the Gift of the Nile. At a smaller scale it is instructive to compare the city states of the Medieval and early Renaissance times that developed in the watershed of a single river, the Arno in Tuscany, and how Pisa, Siena and Florence developed and reached their golden periods at different times depending on their location with regard to proximity to the sea, to the main trunk of the river or in the adjacent hills. Also noteworthy is the role of technology in opening up opportunities for a society. Consider the Netherlands and how its history has been formed by the technical problem of a populous society dealing with too much water as an inexorably rising sea threatens their landscape, or the case of communities in Colorado trying to deal with too little water for farmers and domestic users by bringing their supply over a mountain chain. These and other cases included in the book provide evidence of the successes, near misses and outright failures that mark our ongoing relationship with landscape throughout the history of *Homo sapiens*. The hope is that compilations such as this will lead to a better understanding of the issue and provide us with knowledge valuable in planning a sustainable *modus vivendi* between humanity and landscape for as long as possible.

Audience The book will interest geomorphologists, geologists, geographers, archaeologists, anthropologists, ecologists, environmentalists, historians and others in the academic world. Practically, planners and managers interested in landscape environmental conditions will find interest in these pages and more generally the increasingly large body of opinion in the general public with concerns about Planet Earth will find much to inform their opinions.

Submerged Landscapes of the European Continental Shelf Nicholas C. Flemming, Jan Harff, Delminda Moura, Anthony Burgess, Geoffrey N. Bailey, 2017-05-03 Quaternary Paleoenvironments examines the drowned landscapes exposed as extensive and attractive territory for prehistoric human settlement during the Ice Ages of the Pleistocene when sea levels dropped to 120m 135m below their current levels This volume provides an overview of the geological geomorphological climatic and sea level history of the European continental shelf as a whole as well as a series of detailed regional reviews for each of the major sea basins The nature and variable attractions of the landscapes and resources available for human exploitation are examined as are the conditions under which archaeological sites and landscape features are likely to have been preserved destroyed or buried by sediment during sea level rise The authors also discuss the extent to which we can predict where to look for drowned landscapes with the greatest chance of success with frequent reference to examples of preserved prehistoric sites in different submerged environments Quaternary Paleoenvironments will be of interest to archaeologists geologists marine scientists palaeoanthropologists cultural heritage managers geographers and all those with an interest in the drowned landscapes of the continental shelf

Balkan Biodiversity Huw I. Griffiths, Boris Kryštufek, Jane M. Reed, 2013-03-19. *Balkan Biodiversity* is the first attempt to synthesise our current understanding of biodiversity in the great European hot spot. The conservation of biodiversity is one of today's great ecological challenges, but Balkan biodiversity is still poorly understood in a region with complex physical geography and a long history of political conflict. The Balkans exhibit outstanding levels of endemism, particularly in caves and ancient lakes such as Ohrid, lying at the crossroads of Europe and Asia; they are also renowned as a focus of Pleistocene glacial refugia. This volume unites a diverse group of international researchers for the first time. Its interdisciplinary approach gives a broad perspective on biodiversity at the level of the gene, species, and ecosystem, including contributions on temporal change. Biological groups include plants, mammals, spiders, and humans, cave-dwelling organisms, fish, aquatic invertebrates, and algae. The book should be read by zoologists, botanists, speleobiologists, palaeoecologists, palaeolimnologists, and environmental scientists.

Landscapes and Landforms of Western Canada Olav Slaymaker, 2016-12-01. This is the only book to focus on the geomorphological landscapes of Canada West. It outlines the little appreciated diversity of Canada's landscapes and the nature of the geomorphological landscape which deserves wider publicity. Three of the most important geomorphological facts related to Canada are that 90% of its total area emerged from ice sheet cover relatively recently, from a geological perspective, permafrost underlies 50% of its landmass, and the country enjoys the benefits of having three oceans as its borders: the Arctic, Pacific, and Atlantic oceans. Canada West is a land of extreme contrasts: from the rugged Cordillera to the wide open spaces of the Prairies; from the humid west coast forests to the semi-desert in the interior of British Columbia; and from the vast Mackenzie river system of the north to small steep cascading streams on Vancouver Island. The thickest Canadian permafrost is found in the Yukon, and extensive areas of the Cordillera are underlain by sporadic permafrost side by side with the never glaciated plateaus of the Yukon. One of the curiosities of Canada West is the presence of volcanic landforms extruded through the ice cover of the late Pleistocene and Holocene epochs, which have also left a strong imprint on the landscape. The Mackenzie and Fraser deltas provide the contrast of large river deltas debouching respectively into the Arctic and Pacific oceans.

Cultural Landscapes and Environmental Change Lesley Head, 2017-09-25 Cultural landscapes are usually understood within physical geography as those transformed by human action As human influence on the earth increases advances in palaeocological reconstruction have also allowed for new interpretations of the evidence for the earliest human impacts on the environment It is essential that such evidence is examined in the context of modern trends in social sciences and humanities This stimulating new book argues that convergence of the two approaches can provide a more holistic understanding of long term physical and human processes Split into two major sections this book attempts to bridge the gap between the sciences and humanities The first section provides an analysis of the methodological tools employed in examining processes of environmental change Empirical research in the fields of palaeocology and Quaternary studies is combined with the latest theoretical views of nature and landscape occurring in cultural geography archaeology and anthropology The author examines the way in which environmental management decisions are made The book then moves on to discuss the relevance of this perspective to contemporary issues through a wide variety of international case studies including World Heritage protection landscape preservation indigenous people and cultural tourism

Space and Time in Geomorphology Colin E. Thorn, 2020-05-10 This book first published in 1982 is a collection of articles aimed at advancing the field of geomorphology It starts from the position that a meaningful grasp of landscape evolution would depend upon an understanding of the present spatial distribution of processes and process rates comparison of spatial versus temporal change and careful appraisal of the character and composition of the stratigraphic record Each article uses a data set to address between threshold variability in either a spatial or temporal context and often both
