Representation Theory Of Artin Algebras:

Representation Theory of Artin Algebras Maurice Auslander, Idun Reiten, Sverre O. Smalø, 1997-08-21 This book is an introduction to the contemporary representation theory of Artin algebras by three very distinguished practitioners in the field. Beyond assuming some first year graduate algebra and basic homological algebra the presentation is entirely self contained so the book is suitable for any mathematicians especially graduate students wanting an introduction to this active field. Written in a clear comprehensive style with full proofs. It can very well serve as an excellent reference as well as a textbook for graduate students. EMS Newsletter

Representation Theory of Algebras and Related Topics Raymundo Bautista, Roberto Martínez-Villa, José Antonio de la Peña, 1996 The 14 selected papers discuss recent thinking and findings on the representation theory of algebras and its interaction with other areas of mathematics such as algebraic geometry, ring theory and the representation of groups. The topics include coils and multicoil algebras, representations of wild quivers, the Tits form of a tame algebra, almost split sequences and triangles for Artin algebras and orders and using approximations to analyze the structure of representations. Elements of the Representation Theory of Associative Algebras: Techniques of representation theory Ibrahim Assem, Daniel Simson, Andrzej Skowroński, 2006 Publisher Description unedited publisher data Counter This first part of a two volume set offers a modern account of the representation theory of finite dimensional associative algebras over an algebraically closed field. The authors present this topic from the perspective of linear representations of finite oriented graphs, quivers and homological algebra. The self contained treatment constitutes an elementary up to date introduction to the subject using on the one hand quiver theoretical techniques and on the other tilting theory and integral quadratic forms. Key features include many illustrative examples plus a large number of end of chapter exercises. The detailed proofs make this work suitable both for courses and seminars and for self study. The volume will be of great interest to graduate students.

This text presents six mini courses all devoted to interactions between representation theory of algebras homological algebra and the new ever expanding theory of cluster algebras The interplay between the topics discussed in this text will continue to grow and this collection of courses stands as a partial testimony to this new development The courses are useful for any mathematician who would like to learn more about this rapidly developing field the primary aim is to engage graduate students and young researchers Prerequisites include knowledge of some noncommutative algebra or homological algebra Homological algebra has always been considered as one of the main tools in the study of finite dimensional algebras The strong relationship with cluster algebras is more recent and has quickly established itself as one of the important highlights of today's mathematical landscape This connection has been fruitful to both areas representation theory provides a categorification of cluster algebras while the study of cluster algebras provides representation theory with new objects of study The six mini courses comprising this text were delivered March 7-18 2016 at a CIMPA Centre International de Mathématiques Pures et Appliquées research school held at the Universidad Nacional de Mar del Plata Argentina This research school was dedicated to the founder of the Argentinian research group in representation theory M I Platzeck The courses held were Advanced homological algebra Introduction to the representation theory of algebras Auslander-Reiten theory for algebras of infinite representation type Cluster algebras arising from surfaces Cluster-tilted algebras Cluster characters Introduction to K-theory Brauer graph algebras and applications to cluster algebras

Surveys in Representation Theory of Algebras Alex Martsinkovsky, Kiyoshi Igusa, Gordana Todorov, 2018-09-12 This volume contains selected expository lectures delivered at the annual Maurice Auslander Distinguished Lectures and International Conference over the last several years Reflecting the diverse landscape of modern representation theory of algebras the selected articles include a quick introduction to tilting modules a survey on the first decade of cot-structures in triangulated categories a functorial approach to the notion of module a representation theoretic approach to recollements in abelian categories new examples of applications of relative homological algebra connections between Coxeter groups and quiver representations and recent progress on limits of approximation theory

Trends in Representation Theory of Algebras and Related Topics José Antonio de la Peña, Raymundo Bautista, 2006 This book is based on lectures given during a Workshop on Representations of Algebras and Related Topics Some additional articles are included in order to complete a panoramic view of the main trends of the subject The volume contains original presentations by leading algebraists addressed to specialists as well as to a broader mathematical audience The articles include new proofs examples and detailed arguments Topics under discussion include moduli spaces associated to quivers canonical basis of quantum algebras categorifications and derived categories A infinity

algebras and functor categories cluster algebras support varieties for modules and complexes the Gabriel Roiter measure for modules and selfinjective algebras Model Theory and Modules Mike Prest, 1988-02-25 In recent years the interplay between model theory and other branches of mathematics has led to many deep and intriguing results In this the first book on the topic the theme is the interplay between model theory and the theory of modules The book is intended to be a self contained introduction to the subject and introduces the requisite model theory and module theory as it is needed Dr Prest develops the basic ideas concerning what can be said about modules using the information which may be expressed in a first order language Later chapters discuss stability theoretic aspects of modules and structure and classification theorems over various types of rings and for certain classes of modules Both algebraists and logicians will enjoy this account of an area in which algebra and model theory interact in a significant way The book includes numerous examples and exercises and consequently will make an ideal introduction for graduate students coming to this subject for the first time
