Representations modulaires des groupes reductifs p-adiques. Representations cuspidales de $GL(n)$ Marie-France Vigneras, 1996-07-30 Taking up the works of Harish Chandra Langlands Borel Casselman Bernstein and Zelevinsky among others on the complex representation theory of a p adic reductive group G the author explores the representations of G over an algebraic closure $\bar{F}$ of a finite field F with $l+1$ p elements which are called modular representations The main feature of the book is to develop the theory of types over $\bar{F}$ and to use this theory to prove fundamental results in the theory of modular representations The present book is of evident importance to everyone interested in the representation theory of p adic groups The monograph starts on an elementary level laying proper foundations for the things to come and then proceeds directly to results of recent research Zentralblatt

Modular Representation Theory Of Finite And P-adic Groups Wee Teck Gan, Kai Meng Tan, 2015-02-13 This volume is an outgrowth of the program Modular Representation Theory of Finite and p Adic Groups held at the Institute for Mathematical Sciences at National University of Singapore during the period of 1 26 April 2013 It contains research works in the areas of modular representation theory of p adic groups and finite groups and their related algebras The aim of this volume is to provide a bridge where interactions are rare between researchers from these two areas by highlighting the latest developments suggesting potential new research problems and promoting new collaborations It is perhaps one of the few volumes if not only which treats such a juxtaposition of diverse topics emphasizing their common core at the heart of Lie theory

The Radon Transform Sigurdur Helgason, 1999-08-01 The Radon transform is an important topic in integral geometry which deals with the problem of expressing a function on a manifold in terms of its integrals over certain submanifolds Solutions to such problems have a wide range of applications namely to partial differential equations group representations X ray technology nuclear magnetic resonance scanning and tomography This second edition significantly expanded and updated presents new material taking into account some of the progress made in the field since 1980 Aimed at beginning graduate students this monograph will be useful in the classroom or as a resource for self study Readers will find here an accessible introduction to Radon transform theory an elegant topic in integral geometry

Algorithms in Algebraic Geometry and Applications Laureano Gonzalez-Vega, Recio Tomas, 2012-12-06 The present volume contains a selection of refereed papers from the MEGA 94 symposium held in Santander Spain in April 1994 They cover recent developments in the theory and practice of computation in algebraic geometry and present new applications in science and engineering particularly computer vision and theory of robotics The volume will be of interest to researchers working in the areas of computer algebra and symbolic computation as well as to mathematicians and computer scientists interested in gaining access to these topics

Cardinal Invariants On Boolean Algebras James Donald Monk, 1996 This book is concerned with cardinal number valued functions defined for any Boolean algebra Examples of such functions are independence which assigns to each Boolean algebra the supremum of the cardinalities of its free subalgebras and cellularity which gives the supremum of cardinalities of sets of pairwise disjoint elements Twenty one such functions are studied in detail and many more in passing The questions considered are the behaviour of these functions under algebraic operations such as products free products ultraproducts and their relationships to one another Assuming familiarity with only the basics of Boolean algebras and set theory through to simple infinite combinatorics and forcing the book reviews current knowledge about these functions giving complete proofs for most facts A special feature of the book is the attention given to open problems of which 97 are formulated Based on Cardinal Functions on Boolean Algebras 1990 by the same author the present work is nearly

twice the size of the original work It contains solutions to many of the open problems which are discussed in greater detail than before Among the new topics considered are ultraproducts and Fedorchuk's theorem and there is a more complete treatment of the cellularity of free products Diagrams at the end of the book summarize the relationships between the functions for many important classes of Boolean algebras including tree algebras and superatomic algebras Review This book is an indispensable tool for anyone working in Boolean algebra and is also recommended for set theoretic topologists

Zentralblatt MATH **Algebraic Geometry: Hirzebruch 70** Friedrich Hirzebruch, Piotr Pragacz, Michał Szurek, Jarosław Wiśniewski, 1999 This book presents the proceedings from the conference on algebraic geometry in honor of Professor Friedrich Hirzebruch's 70th Birthday The event was held at the Stefan Banach International Mathematical Center in Warsaw Poland Topics covered in the book include intersection theory singularities low dimensional manifolds moduli spaces number theory and interactions between mathematical physics and geometry Also included are articles from notes of two special lectures The first by Professor M Atiyah describes the important contributions to the field of geometry by Professor Hirzebruch The second article contains notes from the talk delivered at the conference by Professor Hirzebruch Contributors to the volume are leading researchers in the field *Generalized Etale Cohomology Theories* J.F. Jardine, 1997-02-18 A generalized etale cohomology theory is a theory which is represented by a presheaf of spectra on an etale site for an algebraic variety in analogy with the way an ordinary spectrum represents a cohomology theory for spaces Examples include etale cohomology and etale K theory This book gives new and complete proofs of both Thomason's descent theorem for Bott periodic K theory and the Nisnevich descent theorem In doing so it exposes most of the major ideas of the homotopy theory of presheaves of spectra and generalized etale homology theories in particular The treatment includes for the purpose of adequately dealing with cup product structures a development of stable homotopy theory for n fold spectra which is then promoted to the level of presheaves of n fold spectra This book should be of interest to all researchers working in fields related to algebraic K theory The techniques presented here are essentially combinatorial and hence algebraic An extensive background in traditional stable homotopy theory is not assumed *Sub-Riemannian Geometry* Andre Bellaïche, Jean-Jacques Risler, 2012-12-06 Sub Riemannian geometry also known as Carnot geometry in France and non holonomic Riemannian geometry in Russia has been a full research domain for fifteen years with motivations and ramifications in several parts of pure and applied mathematics namely control theory classical mechanics Riemannian geometry of which sub Riemannian geometry constitutes a natural generalization and where sub Riemannian metrics may appear as limit cases diffusion on manifolds analysis of hypoelliptic operators Cauchy Riemann or CR geometry Although links between these domains had been foreseen by many authors in the past it is only in recent years that sub Riemannian geometry has been recognized as a possible common framework for all these topics This book provides an introduction to sub Riemannian geometry and presents the state of the art and open problems in the field It consists of five coherent and original articles by the leading

specialists Andr Bellache The tangent space in sub Riemannian geometry Mikhael Gromov Carnot Carathodory spaces seen from within Richard Montgomery Survey of singular geodesics Hector J Sussmann A cornucopia of four dimensional abnormal sub Riemannian minimizers Jean Michel Coron Stabilization of controllable systems

Harmonic Analysis on the Heisenberg Group Sundaram Thangavelu, 2012-12-06 The Heisenberg group plays an important role in several branches of mathematics such as representation theory partial differential equations number theory several complex variables and quantum mechanics This monograph deals with various aspects of harmonic analysis on the Heisenberg group which is the most commutative among the non commutative Lie groups and hence gives the greatest opportunity for generalizing the remarkable results of Euclidean harmonic analysis The aim of this text is to demonstrate how the standard results of abelian harmonic analysis take shape in the non abelian setup of the Heisenberg group Thangavelu s exposition is clear and well developed and leads to several problems worthy of further consideration Any reader who is interested in pursuing research on the Heisenberg group will find this unique and self contained text invaluable Journal de théorie des nombres de Bordeaux , 2000 Locally Conformal Kähler Geometry Sorin Dragomir, Liuiu Ornea, 2012-12-06 $E \subset O(1,1)$ and $n \in \mathbb{Z}$

Kassaei, Minhyong Kim, 2014-10-16 Automorphic forms and Galois representations have played a central role in the development of modern number theory with the former coming to prominence via the celebrated Langlands program and Wiles proof of Fermat s Last Theorem This two volume collection arose from the 94th LMS EPSRC Durham Symposium on Automorphic Forms and Galois Representations in July 2011 the aim of which was to explore recent developments in this area The expository articles and research papers across the two volumes reflect recent interest in p -adic methods in number theory and representation theory as well as recent progress on topics from anabelian geometry to p -adic Hodge theory and the Langlands program The topics covered in volume two include curves and vector bundles in p -adic Hodge theory associators Shimura varieties the birational section conjecture and other topics of contemporary interest *Number Theory, Analysis and Geometry* Dorian Goldfeld, Jay Jorgenson, Peter Jones, Dinakar Ramakrishnan, Kenneth Ribet, John Tate, 2011-12-21 Serge Lang was an iconic figure in mathematics both for his own important work and for the indelible impact he left on the field of mathematics on his students and on his colleagues Over the course of his career Lang traversed a tremendous amount of mathematical ground As he moved from subject to subject he found analogies that led to important questions in such areas as number theory arithmetic geometry and the theory of negatively curved spaces Lang s conjectures will keep many mathematicians occupied far into the future In the spirit of Lang s vast contribution to mathematics this memorial volume contains articles by prominent mathematicians in a variety of areas of the field namely Number Theory Analysis and Geometry representing Lang s own breadth of interest and impact A special introduction by John Tate includes a brief and fascinating account of the Serge Lang s life This volume s

group of 6 editors are also highly prominent mathematicians and were close to Serge Lang both academically and personally. The volume is suitable to research mathematicians in the areas of Number Theory Analysis and Geometry. Annales Scientifiques de L'École Normale Supérieure École normale supérieure (France), 2016. **Integrable Systems and Foliations** Claude Albert, Robert Brouzet, Jean P. Dufour, 2012-12-06. The articles in this volume are an outgrowth of a colloquium *Systèmes Intégrables et Feuilletages* which was held in honor of the sixtieth birthday of Pierre Molino. The topics cover the broad range of mathematical areas which were of keen interest to Molino: namely integral systems and more generally symplectic geometry and Poisson structures, foliations and Lie transverse structures, transitive structures and classification problems. **Interactions of Quantum Affine Algebras with Cluster Algebras, Current Algebras and Categorification** Jacob Greenstein, David Hernandez, Kailash C. Misra, Prasad Senesi, 2022-03-11. This volume collects chapters that examine representation theory as connected with affine Lie algebras and their quantum analogues in celebration of the impact Vyjayanthi Chari has had on this area. The opening chapters are based on mini courses given at the conference *Interactions of Quantum Affine Algebras with Cluster Algebras, Current Algebras and Categorification* held on the occasion of Chari's 60th birthday at the Catholic University of America in Washington D C June 2018. The chapters that follow present a broad view of the area featuring surveys, original research and an overview of Vyjayanthi Chari's significant contributions. Written by distinguished experts in representation theory, a range of topics are covered including String diagrams and categorification, Quantum affine algebras and cluster algebras, Steinberg groups for Jordan pairs, Dynamical quantum determinants and Pfaffians. *Interactions of Quantum Affine Algebras with Cluster Algebras, Current Algebras and Categorification* will be an ideal resource for researchers in the fields of representation theory and mathematical physics.
