Reproductive Biology of Invertebrates, Accessory Sex Glands, 1993-03-02 Reproductive Biology of Invertebrates Volume III Accessory Sex Glands Edited by K G Adiyodi Accessory Sex Glands is the third volume in the encyclopaedic series and provides very valuable information some hitherto unpublished on the distribution structure origin physiology biochemistry pharmacology and evolution of the accessory sex glands in different groups of invertebrates Volumes I and II of this series published by Wiley have given detailed accounts of the structure origin composition and physiology of female and male gametes and also provided some information on the mechanisms controlling their production The secretions of accessory sex glands are indispensable for several key aspects of gamete physiology and for successful fertilization and development in many internally fertilizing invertebrates Interestingly enough accessory sex gland secretions are produced in some species at least under the influence of gonadotrophic hormones as are the gametes themselves The data on invertebrate accessory sex glands are scattered in various journals and have not been so far collected critically evaluated and published in book form This volume thus fills a void and serves as an indispensable corollary and companion to the two volumes that have already appeared on gametology in the series Contents Series Preface Preface to Volume III Systematic Resume of the Invertebrates Platyhelminthes Turbellaria S S Guraya and V R Parshad Nemertina M Gontcharoff Gnathostomulida Marlene Mainitz Rotifera John J Gilbert Gastrotricha W D Hummon and M R Hummon Nematoda L A Fitzgerald and W Eugene Foor Acanthocephala David W T Crompton Mollusca N W Runham Annelida K G Adiyodi Onychophora Hilke Ruhberg and Volker Storch Arthropoda Crustacea K G Adiyodi and G Anilkumar Arthropoda Insecta Cedric Gillott Arthropoda Myriapoda J M Demange Pentastomida John Riley Species Index Subject Index

**Reproduction and Development in Minor Phyla** T. J. Pandian, 2021-05-13 The 26 recognized minor phyla comprise aberrant clades as most of them terminate as blind offshoots Untied from the discussion on their phylogenesis of minor phyla this book is largely devoted for the first time to aspects of reproduction and development in minor phyletics The minor phyla are not as speciose 1 795 species phylum as the major phyla 157 066 species phylum are The accumulation of deleterious genes causes inbreeding depression among progenies arising from parthenogenesis clonal multiplication and selfing hermaphrodites The reason for the limited species diversity in minor phyla is traced to i eutelism in 65 7% of minor phyletics and ii existence of 21 6% clonals iii 6 4% parthenogens and iv 1 2% selfing hermaphroditism Gonochorism obligately requires motility to search for a mate The combination of low motility and gonochorism from Placozoa to hemocoelomatic minor phyla has limited diversity to

**Gastrotricha and Gnathifera** Andreas Schmidt-Rhaesa, 2014-12-16 This section of the Handbook of Zoology is intended as a comprehensive and exhaustive account of the biology of the taxa Gastrotricha Nematoda Nematomorpha Priapulida Kinorhyncha Loricifera Gnathostomulida

Micrognathozoa Rotifera Seisonida and Acanthocephala covering all relevant topics such as morphology ecology phylogeny and diversity The series is intended to be a detailed and up to date account of these taxa As was the case with the first edition the Handbook is intended to serve as a reliable resource for decades Many of the taxa of this volume are comparatively unknown to many biologists despite their diversity and importance for example in meiofaunal communities Gastrotricha Rotifera Gnathostomulida their fascinating recent discoveries Loricifera and Micrognathozoa their importance as parasites many nematodes Nematomorpha Acanthocephala and their importance for evolutionary questions e g Priapulida Gastrotricha The groups covered range from those poor in species such as Micrognathozoa with 2 known species to the species rich and diverse Nematoda and their ca 20 000 described species While each taxon is covered by one chapter nematodes are treated in several chapters dedicated to their structural taxonomic and ecological diversity

**Biology and Evolution of the Mollusca, Volume 1** Winston Frank Ponder, David R. Lindberg, Juliet Mary Ponder, 2019-11-18 Molluscs comprise the second largest phylum of animals after arthropods occurring in virtually all habitats Some are commercially important a few are pests and some carry diseases while many non marine molluscs are threatened by human impacts which have resulted in more extinctions than all tetrapod vertebrates combined This book and its companion volume provide the first comprehensive account of the Mollusca in decades Illustrated with hundreds of colour figures it reviews molluscan biology genomics anatomy physiology fossil history phylogeny and classification This volume includes general chapters drawn from extensive and diverse literature on the anatomy and physiology of their structure movement reproduction feeding digestion excretion respiration nervous system and sense organs Other chapters review the natural history including ecology of molluscs their interactions with humans and assess research on the group Key features of both volumes up to date treatment with an extensive bibliography thoroughly examines the current understanding of molluscan anatomy physiology and development reviews fossil history and phylogenetics overviews ecology and economic values and summarises research activity and suggests future directions for investigation Winston F Ponder was a Principal Research Scientist at The Australian Museum in Sydney where he is currently a Research Fellow He has published extensively over the last 55 years on the systematics evolution biology and conservation of marine and freshwater molluscs as well as supervised post graduate students and run university courses David R Lindberg is former Chair of the Department of Integrative Biology Director of the Museum of Paleontology and Chair of the Berkeley Natural History Museums all at the University of California He has conducted research on the evolutionary history of marine organisms and their habitats on the rocky shores of the Pacific Rim for more than 40 years The numerous elegant and interpretive illustrations were produced by Juliet Ponder

*Treatise on Zoology - Anatomy, Taxonomy, Biology. The Crustacea, Volume 5* Carel von Vaupel Klein, 2015-03-20 This fifth volume of The Crustacea contains chapters on Devoting a chapter to Pentastomida Class Eupentastomida Orders Bocheusacea Mictacea and Spelaeogriphacea Order Amphipoda Order Tanaidacea For those working on Arthropoda it will be obvious that the chapters

on Pentastomida are newly conceived The other chapters in this book constitute updated translations of contributions in the French edition of the Trait volume 7 III A while the order Bochusacea not featuring in the French version as only more recently described has been added in a combined treatment with the two closely similar orders Overall this constitutes the eighth tome published in this English series viz preceded by volumes 1 2004 2 2006 9A 2010 9B 2012 3 2012 4A 2013 and 4B 2014 From vol 4A onward the chapters are no longer published in the serial sequence as originally envisaged because the various contributions both the updates and the entirely new chapters become available in a more or less random order Yet when completing this series all major issues as well as all taxa currently recognized will have been treated **Insect**

**Reproduction** S. R. Leather, 2018-01-18 This book consisting of ten review chapters contributed by leading workers in their respective fields from around the world covers the whole subject of insect reproduction It begins with the basic physiological questions of insect reproduction moves on to discuss the new advances seen in the fields of behavioural and ecological mechanisms and culminates by examining the recent work on evolutionary biology and its application in the field Each chapter although including a brief review of the basic seminal work focuses mainly on the advances made within the last ten years and highlights those areas in which the respective authors see the greatest scope for further important advances

**Female Control** William Eberhard, 2019-12-31 A growing body of evidence has begun to reveal flaws in the traditional assumption of female passivity and lack of discrimination after copulation has begun William Eberhard has compiled an impressive array of research on the ability of females to shape the outcome of mating He describes studies of many different cryptic mechanisms by which a female can accept a male for copulation but nevertheless reject him as a father Evidence from various fields indicates that such selectivity by females may be the norm rather than the exception Because most post copulatory competition between males for paternity is played out within the bodies of females female behavior morphology and physiology probably often influence male success in these contests Eberhard draws examples from a diversity of organisms ranging from ctenophores to scorpions nematodes to frogs and crickets to humans Cryptic female choice establishes a new bridge between sexual selection theory and reproductive physiology in particular the physiological effects of male seminal products on female reproductive processes such as sperm transport oviposition and remating Eberhard interweaves his review of previous studies with speculation on the consequences of this theoretical development and indicates promising new directions for future research Invertebrate Reproduction & Development, 2007 **Longevity,**

**Senescence, and the Genome** Caleb E. Finch, 1994-05-16 Featuring extensive references updated for this paperback edition Longevity Senescence and the Genome constitutes a landmark contribution to biomedicine and the evolutionary biology of aging To enhance gerontology's focus on human age related dysfunctions Caleb E Finch provides a comparative review of all the phyla of organisms broadening gerontology to intersect with behavioral developmental evolutionary and molecular biology By comparing species that have different developmental and life spans Finch proposes an original typology

of senescence from rapid to gradual to negligible and he provides the first multiphyletic calculations of mortality rate constants

Sexual Biology and Reproduction in Crustaceans Thanumalaya Subramoniam, 2016-09-27 Sexual Biology and Reproduction in Crustaceans covers crustacean reproduction as it deals with the structural morphology of the gamete producing primary sex organs such as the testis and ovary the formation and maturation of gametes their fusion during fertilization and embryonic development that lead to the release of larvae Constituting a diverse assemblage of animals crustaceans are best known by their common representatives such as shrimps lobsters and crabs but also include many more less familiar but biologically important forms This work covers the variety of ways in which both male and female gametes are produced by evolving different sexual systems in crustaceans the range of reproductive systems and the accordingly and highly diverse mechanistic modes of sex determination In addition the book features such topics as genetic and environmental determinants in sex determination pattern variability of mechanisms of fertilization among different species the origin of different mating systems the associated mating and brooding behaviors and the adaptive ability to different environmental conditions with discussion on the evolutionary ecology of social and sexual systems in certain species which have shown eusocial tendencies similar to social insects Marine species occupying diversified ecological niches in tropical and temperate zones reproduce under definitive environmental conditions Therefore reproductive ecology of different crustaceans inhabiting different ecological niches also constitutes another important aspect of the work along with yolk utilization and embryogenesis leading to release of different larval forms which reflect on their aquatic adaptability Forms a valuable source of recent references on the current research in crustacean reproductive physiology Covers various mating and breeding systems providing illustrative examples for sexual selection parental care of developing eggs and embryos and the evolution of other reproductive behaviors Features contributions written in the form of review articles enabling readers to not only gain information in the respective subject but also help them stimulate ideas in their chosen field of research Includes a glossary created by the author to define technical terms Demonstrates the ability of crustacean species to serve as useful model systems for other organisms to investigate issues related to sexual conflict mate choice and sperm competition Discusses techniques in endocrine research to help researchers in aquaculture develop protocols in the control of reproduction
