Reproductive And Developmental Toxicity Of Metals:

Reproductive and Developmental Toxicity of Metals Tom Clarkson, 2012-12-06 The Permanent Commission and International Association on Occupational Health PCIAOH established in 1969 a Subcommittee on the Toxicology of Metals under the chairmanship of Lars Friberg This committee which later was named the Scientific Committee on the Toxicology of Metals has organized a number of previous meetings that have led to publications in three major areas of metal toxicology a preliminary meeting in Slanchev Bryag Bulgaria in 1971 followed by a meeting in 1972 in Buenos Aires Argentina which produced two reports Dukes and Friberg 1971 Task Group on Metal Accumulation 1973 that discussed the metabolism of metals with special reference to absorption excretion and biological half times The effects and dose response relationships of toxic metals including a discussion of general principles was the second major topic addressed by the Scientific Committee at a meeting in Tokyo in 1974 Nordberg 1976 The philosophy of this conference as well as the previous one in Buenos Aires was based on the concept of a threshold dose for the occurrence of adverse effects In a conference held in Atlanta USA in 1980 the scope of discussion on metal effects was broadened to include the role of metals in carcinogenesis Thus for the first time the Scientific Committee took under consideration the possibility of non threshold relationships Belman and Nordberg 1981 In addition the Scientific Committee on the Toxicology of Metals organized a workshop on metal interactions in Stockholm 1977 Nordberg et al

Metals, Fertility, and Reproductive Toxicity Mari S. Golub, 2005-11-10 Environmental endocrine disruptors have been at the heart of discussions about chemicals and their effects on fertility but the focus has been on organic compounds and the role of metals has been largely overlooked until now Taking an organ system based approach Metals Fertility and Reproductive Toxicity examines the effects of metals found in the everyday environment on fertility rates in humans and animal populations This volume summarizes and evaluates the literature in the area of metal effects on fertility and reproduction in humans laboratory animals and wildlife International experts have contributed chapters that explore how the ovary testes uterine system and neuroendocrine system among others respond to metal exposure Reviewing both current knowledge and cutting edge data the chapters focus on either a particular metal or a particular population A massive amount of data on this subject has been generated summarized and reviewed over the years While there are many books available on metals toxicity and on reproductive toxicity no current book explores both in the same volume Culling information from throughout the literature Metals Fertility and Reproductive Toxicity supplies an in depth look at the role of metals in endocrine disruption and the spectrum of mechanisms involving metals that can influence reproduction

Toxicology Thomas J. Haley, William O. Berndt, 2002-02-27 Although many view toxicology as a new science since man discovered the medicinal properties of plants it has been known that such materials could produce toxic effects Recently developments in analytical chemistry have advanced and specialized the field of toxicology The analytical chemical approach has altered our thinking We have become able to recognize smaller and smaller quantities of more and more chemicals At times it would appear that this analytical approach has blunted our perception of the biological aspects of toxicology In reality newer developments have afforded broader insights and a wider range of concerns that are emphasized in this state of the art text Such concerns include the study of birth defects and chemical effects on the immune system the worldwide use of pesticides rodenticides herbicides

and fungicides for increasing food production and permitting protection from various insects and animals that has resulted in many instances in human population poisonings studies on the neurotoxicity and tolerance to the organophosphates in an effort to understand these important chemicals and develop better modalities to counter their adverse effects and target organ toxicity involving the liver kidney and lungs This book considers not only the student and clinician but also the active practitioner of toxicological investigations A broad but focused view of toxicology is presented by experts in the field with particular emphasis on specific target organs and the current state of the art concerns already mentioned rather than on subjects such as carcinogenesis and mutagenesis that are thoroughly covered in numerous other texts This unique text will serve to narrow the gaps in the existing knowledge base gaps that must continue to be filled by ongoing and future research thus expanding our collective knowledge of biological aspects of toxicology
