Research Needs in Pediatric Kidney Disease Barry Leonard, 2003-10-01 Proceedings of the Pediatric Nephrology Task Force Meeting Wash DC Jan 27 1999 held by the Nat Institute of Diabetes and Digestive and Kidney Diseases and Amer Soc of Pediatric Nephrology This task force was convened to review current research and identify research priorities and barriers to progress Kidney disease is a major cause of illness and death among children who make up about 25% of U S citizens Chapters Research Opportunities Genetic and Developmental Diseases Acute Renal Failure Immune Mediated Diseases Glomerulonephritis and Tubulointerstitial Diseases and Chronic Renal Failure and Its Treatment Tools Methodologies and Resources Challenges and Barriers and Congressional Action **Ethical Conduct of Clinical Research Involving**

**Children** Institute of Medicine, Board on Health Sciences Policy, Committee on Clinical Research Involving Children, 2004-08-09 In recent decades advances in biomedical research have helped save or lengthen the lives of children around the world With improved therapies child and adolescent mortality rates have decreased significantly in the last half century Despite these advances pediatricians and others argue that children have not shared equally with adults in biomedical advances Even though we want children to benefit from the dramatic and accelerating rate of progress in medical care that has been fueled by scientific research we do not want to place children at risk of being harmed by participating in clinical studies Ethical Conduct of Clinical Research Involving Children considers the necessities and challenges of this type of research and reviews the ethical and legal standards for conducting it It also considers problems with the interpretation and application of these standards and conduct concluding that while children should not be excluded from potentially beneficial clinical studies some research that is ethically permissible for adults is not acceptable for children who usually do not have the legal capacity or maturity to make informed decisions about research participation The book looks at the need for appropriate pediatric expertise at all stages of the design review and conduct of a research project to effectively implement policies to protect children It argues persuasively that a robust system for protecting human research participants in general is a necessary foundation for protecting child research participants in particular *Pediatric Nephrology* Ellis D. Avner, William E. Harmon, Patrick Niaudet, Norishige Yoshikawa, 2009-08-20 Here is an extensive update of Pediatric Nephrology which has become the standard reference text in the field It is global in perspective and reflects the international group of editors who are well recognized experts in pediatric nephrology Within this text the development of kidney structure and function is followed by detailed and comprehensive chapters on all childhood kidney diseases When Children Die Institute of Medicine, Board on Health Sciences Policy, Committee on Palliative and End-of-Life Care for Children and Their Families, 2003-02-09 The death of a child is a special sorrow No matter the circumstances a child's death is a life altering experience Except for the child who dies suddenly and without forewarning physicians nurses and other medical personnel usually play a central role in the lives of children who die and their families At best these professionals will exemplify

medicine with a heart At worst families encounters with the health care system will leave them with enduring painful memories anger and regrets When Children Die examines what we know about the needs of these children and their families the extent to which such needs are and are not being met and what can be done to provide more competent compassionate and consistent care The book offers recommendations for involving child patients in treatment decisions communicating with parents strengthening the organization and delivery of services developing support programs for bereaved families improving public and private insurance training health professionals and more It argues that taking these steps will improve the care of children who survive as well as those who do not and will likewise help all families who suffer with their seriously ill or injured child Featuring illustrative case histories the book discusses patterns of childhood death and explores the basic elements of physical emotional spiritual and practical care for children and families experiencing a child s life threatening illness or injury
