Proceedings of the Workshop on Flood-based Farming for Food Security and Adaption to Climate Change in Ethiopia: Potential and Challenges, Adama, Ethiopia, 30-31 October 2013 Erkossa, Teklu, Hagos, Fitsum, Lefore, Nicole, 2014-05-30

Historical Dictionary of Ethiopia David H. Shinn, Thomas P. Ofcansky, 2013-04-11 Ethiopia is clearly one of the most important countries in Africa First of all with about 75 million people it is the third most populous country in Africa Second it is very strategically located in the Horn of Africa and bordering Eritrea Sudan Kenya and Somalia with some of whom it has touchy and sometimes worse relations Yet its capital Addis Ababa is the headquarters of the African Union the prime meeting place for Africa's leaders So if things went poorly in Ethiopia this would not be good for Africa and for a long time this was the case with internal disruption rife until it was literally suppressed under the strong rule of the recently deceased Meles Zenawi The Historical Dictionary of Ethiopia Second Edition covers the history of Ethiopia through a chronology an introductory essay appendixes and an extensive bibliography The dictionary section has several hundred cross referenced entries on important personalities politics economy foreign relations religion and culture This book is an excellent access point for students researchers and anyone wanting to know more about Ethiopia

Impacts of Climate Change and Variability on Pastoralist Women in Sub-Saharan Africa Melese Getu, Munyae M. Mulinge, 2013 The term climate change is used to denote any significant but extended change in the measures of climate The changes could be due to natural variability or as a result of human activities such as the burning of fossil fuels to produce energy deforestation industrial processes and some agricultural practices Such activities release large amounts of carbon dioxide and other greenhouse gases into the atmosphere that hang like a blanket around the earth thus trapping energy in the atmosphere and causing it to warm up This results increasingly in climate variability which is characterised by extreme seasonal annual temporal and non spatial variability in temperature vagaries of precipitation rainfall patterns and amounts and or wind patterns occurring over a prolonged period of time The last decade 2001 2010 has been the warmest on record with the average temperatures reaching 0.46°C above the 1961 1990 mean and 0.21°C warmer than the 1991 2000 period It has been proved that the African continent is warming up faster all year round than the global average a trend that is likely to continue By the year 2100 it is predicted that temperature changes will fall into

ranges of about 1.4°C to nearly 5.8°C increase in mean surface temperature compared to 1990 and the mean sea level will rise between 10cm to 90 cm AMCEN 2011 The interior of semiarid margins of the Sahara and central southern Africa will be the most affected by such warming AMCEN 2011 To tackle the phenomenon of climate change effectively human societies have put in place a combination of mitigation and adaptation mechanisms and strategies Whereas mitigation aims at avoiding or lessening the impacts of the unmanageable the goal of adaptation is to manage the unavoidable That men and women are affected differently by climate change suggests that they also differ in terms of the adaptation mechanisms they employ Despite the existence of gender based differences in the effects of climate change and in adaptation and coping strategies studies on the gender differential impacts of climate change and variability on women in general and pastoralist women in particular in sub Saharan Africa are limited This volume offers insights and knowledge that pastoralist women developed on climate change adaptation through their experiences in their households and communities and thereby tries to narrow this gap
