Russian Space Probes Brian Harvey, Olga Zakutnyaya, 2011-05-04 Brian Harvey recounts for the first time the definitive history of scientific Russian space probes and the knowledge they acquired of the Earth its environment the Moon Mars and Venus He examines what Russian Space Science has actually achieved in furthering our knowledge of the Solar System focusing on the instrumentation and scientific objectives and outcomes the information gained and lessons learnt Boxes and charts are used extensively in order to convey in an easily understandable manner for the non scientific reader the problems and issues addressed and solved by Soviet space science The book opens with the story of early space science in Russia which started when the first Russian rockets were fired into the high atmosphere from Kapustin Yar in the late 1940s Instruments were carried to measure and map the atmosphere and later rockets carried dogs to test their reactions to weightlessness In order to beat America into Earth orbit two simpler satellites than originally planned were launched Sputnik and Sputnik 2 which provided some initial information on atmospheric density while the following Sputnik 3 carried twelve instruments to measure radiation belts solar radiation the density of the atmosphere and the Earth's magnetic field The author recounts how by the 1960s the Soviet Union had developed a program of investigation of near Earth space using satellites within the Cosmos program in particular the DS Dnepropetrovsky Sputnik small satellites developed to investigate meteoroids radiation the magnetic fields the upper atmosphere solar activity ionosphere charged particles cosmic rays and geophysics Brian Harvey then gives the scientific results from Russian lunar exploration starting with the discovery of the solar wind by the First Cosmic Ship and the initial mapping of the lunar far side by the Automatic Interplanetary Station He describes Luna 10 which made the first full study of the lunar environment Luna 16 which brought soil back to Earth and the two Moon rovers which travelled 50 kms across the lunar surface taking thousands of measurements soil analyses and photographs as well as profiles of discrete areas Chapters 4 and 5 describe in detail the scientific outcomes of the missions to Venus and Mars before considering the orbiting space stations in Chapter 6 Space science formed an important part of the early manned space program the prime focus being the human reaction to weightlessness how long people could stay in orbit and the effects on the body as well as radiation exposure Chapter 7 looks at the later stage of Soviet and Russian space science including Astron and Granat the two observatories of the 1980s and

Bion the space biology program which flew monkeys and other animals into orbit The final chapter looks forward to a new period of Russian space science with the Spektr series of observatories and a range smaller science satellites under the Federal Space Plan 2006-2015 NASA Thesaurus Alphabetical Update, 1971 **NASA Thesaurus Alphabetical Update** United States. Russian Planetary Exploration Brian Harvey,2007-07-05 Russia's accomplishments in planetary space exploration were not achieved easily Formerly the USSR experienced frustration in trying to tame unreliable Molniya and Proton upper stages and in tracking spacecraft over long distances This book will assess the scientific haul of data from the Venus and Mars missions and look at the engineering approaches The USSR developed several generations of planetary probes from MV and Zond to the Phobos type The engineering techniques used and the science packages are examined as well as the nature of the difficulties encountered which ruined several missions The programme's scientific and engineering legacy is also addressed as well as its role within the Soviet space programme as a whole Brian Harvey concludes by looking forward to future Russian planetary exploration e.g. Phobos Grunt sample return mission Several plans have been considered and may with a restoration of funding come to fruition Soviet studies of deep space and Mars missions e.g. TMK Aelita have much to offer contemporary planners in Europe and the United States Long duration ISS and Mir missions provide a medical record of considerable value in constructing human exploration of Mars Illustrated with the photographs taken by Soviet Venus and Mars probes pictures of the spacecraft diagrams of the flight paths and landing techniques and maps of the landing sites the book will build on the published scientific papers from the programme archived material and memoirs and other material coming to light in recent years
