Smith,1983-10-31 F Macfarlane Burnet I have been an interested onlooker for many years at research on the biology of trace elements particularly in its bearing on the pastoral and agricultural importance of copper zinc cobalt and molybdenum deficiencies in the soil of various parts of Australia More recently I have developed a rather more specific interest in the role of zinc particularly in relation to the dominance of zinc metalloenzymes in the processes of DNA replication and repair and its possible significance for human pathology One area of special significance is the striking effect of zinc deficiency in the mother in producing congenital abnormalities in the fetus The fact that several chapters in the present work are concerned with this and other aspects of zinc deficiency is I fancy the editors justification for inviting me to write this foreword In reading several of the chapters before publication my main impression was of the great potential importance of the topic of trace metal biology in both its negative and positive aspects the effects of deficiency of essential elements and the toxicity of such pollutants of the modern world as lead or mercury mainly as organic compounds     Government Reports Index ,1972
