In-Between: Architectural Drawing and Imaginative Knowledge in Islamic and Western Traditions Hooman Koliji, 2016-03-09 Contemporary technical architectural drawings in establishing a direct relationship between the drawing and its object tend to privilege the visible physical world at the expense of the invisible intangible ideas and concepts including that of the designer's imagination As a result drawing may become a utilitarian tool for documentation devoid of any meaningful value in terms of a kind of knowledge that could potentially link the visible and invisible This book argues that design drawings should be recognized as intermediaries mediating between the world of ideas and the world of things spanning the intangible and tangible The notion of the Imaginal as an intermediary between the invisible and visible is discussed showing how architectural drawings lend themselves to this notion by performing as creative agents contributing not only to the physical world but also penetrating the realm of concepts The book argues that this in-between quality to architectural drawing is essential and that it is critical to perceive drawings as subtle bodies that hold physical attributes for example form proportion color highly evocative yet with no matter Focusing on Islamic geometric architectural drawings both historical and contemporary it draws on key philosophical and conceptual notions of imagination from the Islamic tradition as these relate to the creative act In doing so this book not only makes important insights into the design process and act of architectural representation but more broadly it adds to debates on philosophies of the imagination linking both Western and Islamic traditions

An Introduction to the Symbolic Literature of the Renaissance ,

Echoes of an Invisible World Jacomien Prins, 2014-11-27 In *Echoes of an Invisible World* Jacomien Prins offers an account of the transformation of the notion of Pythagorean world harmony during the Renaissance and the role of the Italian philosophers Marsilio Ficino 1433-1499 and Francesco Patrizi 1529-1597 in redefining the relationship between cosmic order and music theory By concentrating on Ficino's and Patrizi's work the book chronicles the emergence of a new musical reality between the fifteenth and sixteenth centuries a reality in which beauty and the complementary idea of celestial harmony were gradually replaced by concepts of expressivity and emotion that is to say by a form of idealism that was ontologically more subjective than the original Pythagorean and Platonic metaphysics
