Collen, Marion J. Ball, 2015-10-08

This is a meticulously detailed chronological record of significant events in the history of medical informatics and their impact on direct patient care and clinical research offering a representative sampling of published contributions to the field The History of Medical Informatics in the United States has been restructured within this new edition reflecting the transformation medical informatics has undergone in the years since 1990 The systems that were once exclusively institutionally driven hospital multihospital and outpatient information systems are today joined by systems that are driven by clinical subspecialties nursing pathology clinical laboratory pharmacy imaging and more At the core is the person not the clinician not the institution whose health all these systems are designed to serve A group of world renowned authors have joined forces with Dr Marion Ball to bring Dr Collen s incredible work to press These recognized leaders in medical informatics many of whom are recipients of the Morris F Collen Award in Medical Informatics and were friends of or mentored by Dr Collen carefully reviewed editing and updating his draft chapters This has resulted in the most thorough history of the subject imaginable and also provides readers with a roadmap for the subject well into later in the century

Dental Informatics: Strategic Issues for the Dental Profession John J. Salley, John L. Zimmerman, Marion J. Ball, 2013-03-08 During the course of this year 1990 dentistry will celebrate its sesquicentennial as a profession In February 1840 the Baltimore College of Dental Surgery the Dental School of the University of Maryland was chartered by the Maryland General Assembly as the world s first dental school In the same year the American Society of Dental Surgeons the antecedent of the present day American Dental Association was founded also in Baltimore In the previous year 1839 the American Journal of Dental Science was initiated as the first periodic scientific and professional publication in dentistry later evolving to the Journal of the American Dental Association With the congruence of three fundamental elements which are essential to any profession a unique program of education a formal means to communicate and freely share new information and an organization devoted to maintenance of professional ethics and standards through self regulation dentistry began evolving to its current status as a valued and respected health profession From its birth and through the intervening century and a half dentistry has been a profession heavily reliant on technology as well as science Dentists variously are credited with the

discovery and development of general anesthesia and the precision casting technique and they make significant use of rotary cutting instruments ultrasonics laser technology unique biomaterials and intraosseous implants to mention only a few techniques

Mental Health Computing Marvin J. Miller, Henric W. Hammond, Matthew J. Hile, 2012-12-06 Increasingly more computer applications are becoming available to assist mental health clinicians and administrators in patient evaluation and treatment and mental health management education and research Topics covered include automated assessment procedures MR E The Mental Retardation Expert computerized assessment system for psychotherapy evaluation and research computer assisted therapy of stress related conditions computerized patient evaluation in a clinical setting computerized treatment planning the VA national mental health database networks managed care DSM IV diagnosis quality management cost control knowledge coupling telemedicine the clinical library assistant and monitoring independent service providers

HELP: A Dynamic Hospital Information System Gilad J. Kuperman, Reed M. Gardner, T. Allan Pryor, 2013-03-12 This monograph series is intended to provide medical information scientists health care administrators health care providers and computer science professionals with successful examples and experiences of computer applications in health care settings Through the exposition of these computer applications we attempt to show what is effective and efficient and hopefully provide some guidance on the acquisition or design of information systems so that costly mistakes can be avoided The health care industry is currently being pushed and pulled from all directions from the clinical side to increase quality of care from the business side to improve financial stability from the legal and regulatory sides to provide more detailed documentation and in a university environment to provide more data for research and improved opportunities for education Medical information systems sit in the middle of all these demands They are not only asked to provide more better and more timely information but also to interact with and monitor the process of health care itself by providing clinical reminders warnings about adverse drug interactions alerts to questionable treatment alarms for security breaches mail messages workload schedules etc Clearly medical information systems are functionally very rich and demand quick response time and a high level of security They can be classified as very complex systems and from a developer's perspective as risky systems

Decision Support Systems in Critical Care M. Michael Shabot, Reed M.

Gardner, 2012-12-06 Modern critical care is characterized by the collection of large volumes of data and the making of urgent patient care decisions. The two do not necessarily go together easily. For many years the hope has been that ICU data management systems could play a meaningful role in ICU decision support. These hopes now have a basis in fact and this book details the history, methodology, current status, and future prospects for critical care decision support systems. By focusing on real and operational systems, the book demonstrates the importance of integrating data from diverse clinical data sources, the keys to implementing clinically usable systems, the pitfalls to avoid in implementation, and the development of effective evaluation methods.

Medical Informatics Europe 1991 Klaus-Peter Adlassnig, Georg Grabner, Stellan Bengtsson, Rolf Hansen, 2013-03-13. This volume contains the proceedings of the Tenth International Congress on Medical Informatics MIE 91 that will be held in Vienna, Austria, August 19-22, 1991. The MIE 91 Congress was organized by the European Federation for Medical Informatics (EFMI) in cooperation with the Austrian Computer Society (OCG) and the Austrian Society for Biomedical Engineering (OGBMT). It follows the previous congresses in Cambridge (1978), Berlin (1979), Toulouse (1981), Dublin (1982), Brussels (1984), Helsinki (1985), Rome (1987), Oslo (1988), and the Congress 1990 in Glasgow. The proceedings contain 199 contributions to the MIE 91 Congress. They cover all presentations which are part of the scientific programme of MIE 91: among them 157 paper presentations with an average of five pages, 28 poster presentations again with an average of five pages, and 14 abstracts of demonstrations with an average of one page. The papers included were selected by an International Programme Committee out of over 300 submissions after careful review by at least two international reviewers for whose estimable efforts we are especially thankful. The recommendations of the reviewers were incorporated in the final texts. Some papers were reworked by a professional translator to obtain a high quality of presentation. Several submissions could not be considered for presentation at MIE 91 because of shortage of congress time and limitations in the number of pages of the proceedings.

Knowledge Engineering in Health Informatics Homer R. Warner, Dean K. Sorenson, Omar Bouhaddou, 2012-12-06. This monograph series is intended to provide medical information scientists, health care administrators, physicians, nurses, other health care providers, and computer science professionals with successful examples and experiences of computer applications in health care settings. Through these computer applications, we attempt to show what is effective and efficient and hope to provide guidance on the acquisition or design of medical information systems so that costly mistakes can be avoided. Health care provider organizations such as hospitals and clinics are experiencing large demands for clinical information because of a transition from a fee-for-service to a capitation-based health care economy. This transition changes the way health care services are being paid for. Previously, nearly all health care services were paid for by insurance companies after the services were performed. Today, many procedures need to be pre-approved, and many charges

for clinical services must be justified to the insurance plans Ultimately in a totally capitated system the more patient care services are provided per patient the less profitable the health care provider organization will be Clearly the financial risks have shifted from the insurance carriers to the health care provider organizations For hospitals and clinics to assess these financial risks management needs to know what services are to be provided and how to reduce them without impacting the quality of care The balancing act of reducing costs but maintaining health care quality and patient satisfaction requires accurate information about the clinical services **Intramural Annual Report** National Institute on Aging,1990
