Ammerman, Michel Hersen, 2013-06-29 The past 20 years have seen the emergence of family violence as one of the most critical problems facing society The

alarming incidence figures of abuse and neglect directed toward family members justify this attention. For example, over 1 million children are thought to be abused and neglected each year. Similarly, almost 2 million women are victims of wife battering each year. Annual rates of elderly mistreatment are thought to be as high as 32 per 1000 population. Accurate epidemiological data only now are being compiled on more recently recognized forms of mistreatment such as psychological abuse, ritualistic abuse of children, and child witnessing of adult violence. The pervasiveness of domestic mistreatment makes it a priority for clinicians and researchers alike. For clinicians, intrafamilial violence represents a formidable challenge with respect to assessment and treatment. The etiology of abuse and neglect is multidetermined. There are numerous pathways in the development of family violence, and these interact and converge in a nonlinear fashion. The consequences of family violence are equally complex and divergent. Victims of mistreatment can display a variety of physical injuries and psychological disturbances. No single psychiatric syndrome or symptom constellation has been consistently implicated in any form of family mistreatment. The perpetrators of family violence are equally heterogeneous in their clinical presentations. Illustrative dysfunctions in perpetrators include skill deficits, substance abuse, mental illness, and impulse control disorders.

**Sexual Abuse** Ersi Abaci Kalfoğlu, 2012-03-23 Sexual assault can be considered as expression of aggression through sex. This in turn can have serious negative effects on a survivor's social and occupational functioning. This book has been organized towards that specific approach by compiling the scientific work of very well known scientists from all over the world. The psychological victimization of sexual assault, the physiological aspect of sexual abuse and the different attitudes in coping with sexual assault based on different cultural backgrounds are analyzed. Having in mind that one solution may not necessarily be suitable for all cases, we hope that this book will open a debate on sexual assault for future practice and policy and that it will be a step forward to break the silence.
