**Infrahumanisms** Megan H. Glick, 2018-10-18 In *Infrahumanisms* Megan H Glick considers how conversations surrounding nonhuman life have impacted a broad range of attitudes toward forms of human difference such as race sexuality and health She examines the history of human and nonhuman subjectivity as told through twentieth century scientific and cultural discourses that include pediatrics primatology eugenics exobiology and obesity research Outlining how the category of the human is continuously redefined in relation to the infrahuman a liminal position of speciation existing between the human and the nonhuman Glick reads a number of phenomena from early twentieth century efforts to define children and higher order primates as liminally human and the postwar cultural fascination with

extraterrestrial life to anxieties over AIDS SARS and other cross species diseases In these cases the efforts to define a universal humanity create the means with which to reinforce notions of human difference and maintain human nonhuman hierarchies In foregrounding how evolving definitions of the human reflect shifting attitudes about social inequality Glick shows how the consideration of nonhuman subjectivities demands a rethinking of long held truths about biological meaning and difference      Children and Youth in Sickness and in Health Janet Golden,Richard Meckel,Heather Munro

Prescott,2004-04-30 Six original essays reflect the growing scholarly interest in the history of childhood and youth particularly issues affecting child health and welfare These important new essays show how changing patterns of health and disease have responded to and shaped notions of childhood and adolescence as life stages Until the early 20th century life threatening illnesses were a sinister presence in the lives of children of all social classes Today many diseases and threats to child health have been eliminated or alleviated Yet critical problems remain New threats such as AIDS and violence take a steady toll Child health remains an active concern for all families Despite the development of health care policies social welfare policies and effective medication the home remains as it was in the Colonial period the most critical site of care Parents are still central to the preservation of children s health This work imposes a holistic view of this experience for children and families By examining the child s perspective of illness the authors make an important contribution to the understanding of illness as part of the developmental process of growing up      **Pediatric Formulations** Daniel

Bar-Shalom,Klaus Rose,2014-01-30 Until the 1990s it was generally accepted that medicines were first developed for adults and their use in children was investigated later if at all One of the main tasks of hospital pharmacies was the manufacturing of child appropriate formulations in a more or less makeshift way The first change came in 1997 with U S legislation that rewarded manufacturers to do voluntary pediatric research Ten years later the European Union passed legislation that required manufacturers to discuss all pediatric aspects including formulations with the regulatory authorities as a condition of starting the registration procedure In consequence manufacturers must now cover all age groups including the youngest ones So far pediatric formulations were more a focus for academic researchers Through the changed regulatory environment there is now a sudden high commercial demand for age appropriate formulations This book begins by highlighting the anatomical physiological and developmental differences between adults and children of different ages It goes on to review the existing technologies and attempts to draw a roadmap to better innovative formulations in particular for oral administration The regulatory clinical ethical and pharmaceutical framework is also addressed      **From Hippocrates to**

**COVID-19** Dale A. Stirling,2023-05-12 The COVID 19 pandemic provides stark evidence of the importance of medicine on a global scale However revisiting the influenza pandemic of 1918 provided a perspective as we searched for a viable vaccine and instituted public health measures This shows that medical knowledge is an accumulative process extending to the past and it is in the spirit of that legacy that this bibliography has been compiled The book is a one stop resource that cites

literature related to the historical aspects of medicine It also acknowledges medicine's global reach and devotes significant effort in that respect Although the online world seems to dominate on both a social and educational level there is still a need for thoughtfully curated and focused reference works and this bibliography accomplishes that goal The book has 9 000 citations It utilizes the WHO's International classification of Diseases for the section on diseases and disorders and the U S Food Drug Administration's Product Code Classification Database for the section on medical devices equipment and instruments It includes detailed subject geographic and people indexes for an easy reference
