Marine Proteins

and Peptides Se-Kwon Kim, 2013-03-18 Food proteins and bioactive peptides play a vital role in the growth and development of the body's structural integrity and regulation as well as having a variety of other functional properties. Land animal derived food proteins such as collagen and gelatin carry risks of contamination such as BSE. Marine derived proteins which can provide equivalents to collagen and gelatin without the associated risks are becoming more popular among consumers because of their numerous health beneficial effects. Most marine derived bioactive peptides are currently underutilized. While fish and shellfish are perhaps the most obvious sources of such proteins and peptides, there is also the potential for further development of proteins and peptides from sources like algae, sea cucumber and molluscs. Marine derived proteins and peptides also have potential uses in novel products with the possibility of wide commercialization in the food, beverage, pharmaceutical and cosmetic industries as well as in other fields such as photography, textiles, leather, electronics, medicine and biotechnology. *Marine Proteins and Peptides: Biological Activities and Applications* presents an overview of the current status, future industrial perspectives and commercial trends of bioactive marine derived proteins and peptides. Many of the industrial perspectives are drawn from the food industry but the book also refers to the pharmaceutical and cosmetics industries. There have recently been significant advances in isolating functional ingredients from marine bio resources and seafood by products for use in these industries but little has been published creating a knowledge gap particularly with regard to the isolation and purification processes. This book is the first to fill that gap. *Marine Proteins and Peptides: Biological Activities and Applications* is a valuable resource for researchers in the marine biochemistry field as well as food industry managers interested in exploring novel techniques and knowledge on alternative food protein sources. It will become a standard reference book for researchers involved in developing marine bio resources and seafood by products for novel nutraceutical, cosmetics and pharmaceutical applications. It will also appeal to managers and product developers in the food, pharmaceutical and cosmetics industries particularly those looking to use marine derived proteins and peptides as substitutes or replacements for unfashionable or outdated food components.

Functional Polymers in Food Science Giuseppe Cirillo, Umile Gianfranco Spizzirri, Francesca Iemma, 2015-03-09 Polymers are an important part in everyday life products made from polymers range from sophisticated articles such as biomaterials to aerospace materials One of the reasons for the great popularity exhibited by polymers is their ease of processing Polymer properties can be tailored to meet specific needs by varying the atomic composition of the repeat structure by varying molecular weight and by the incorporation via covalent and non covalent interactions of an enormous range of compounds to impart specific activities In food science the use of polymeric materials is widely explored from both an engineering and a nutraceutical point of view Regarding the engineering application researchers have discovered the most suitable materials for intelligent packaging which preserves the food quality and prolongs the shelf life of the products Furthermore in agriculture specific functionalized polymers are used to increase the efficiency of treatments and reduce the environmental pollution In the nutraceutical field because consumers are increasingly conscious of the relationship between diet and health the consumption of high quality foods has been growing continuously Different compounds e g high quality proteins lipids and polysaccharides are well known to contribute to the enhancement of human health by different mechanisms reducing the risk of cardiovascular disease coronary disease and hypertension This second volume focuses on the importance of polymers and functional food and in food processing

Physiological, Molecular, and Genetic Perspectives of Wheat Improvement Shabir H Wani, Amita

Mohan, Gyanendra Pratap Singh, 2020-12-17 World population is growing at an alarming rate and may exceed 9.7 billion by 2050 whereas agricultural productivity has been negatively affected due to yield limiting factors such as biotic and abiotic stresses as a result of global climate change Wheat is a staple crop for 20% of the world population and its yield needs be augmented correspondingly in order to satisfy the demands of our increasing world population Green revolution the introduction of semi dwarf high yielding wheat varieties along with improved agronomic management practices gave rise to a substantial increase in wheat production and self sufficiency in developing countries that include Mexico India and other south Asian countries Since the late 1980s however wheat yield is at a standoff with little fluctuation The current trend is thus insufficient to meet the demands of an increasing world population Therefore while conventional breeding has had a great impact on wheat yield with climate change becoming a reality newer molecular breeding and management tools are needed to meet the goal of improving wheat yield for the future With the advance in our understanding of the wheat genome and more importantly the role of environmental interactions on productivity the idea of genomic selection has been proposed to select for multi genic quantitative traits early in the breeding cycle Accordingly genomic selection may remodel wheat breeding with gain that is predicted to be 3 to 5 times that of crossbreeding Phenomics high throughput phenotyping is another fairly recent advancement using contemporary sensors for wheat germplasm screening and as a selection tool Lastly CRISPR Cas9 ribonucleoprotein mediated genome editing technology has been successfully utilized for efficient and specific genome editing of hexaploid bread wheat In summary there has been exciting progresses in the development of non GM wheat plants resistant to biotic and abiotic stress and or wheat with improved nutritional quality We believe it is important to highlight these novel research accomplishments for a broader audience with the hope that our readers will ultimately adopt these powerful technologies for crops improvement in order to meet the demands of an expanding world population

Food proteomics is one of the most dynamic and fast developing areas in food science The goal of this book is to be a reference guide on the principles and the current and future potential applications of proteomics in food science and technology More specifically the book will discuss recent developments and the expected trends of the near future in food proteomics The book will be divided into two parts The first part 7 chapters will focus on the basic principles for proteomics e g sample preparation such as extraction and separation techniques analytical instrumentation currently in use and available databases for peptide and protein identification The second part of the book 26 chapters will focus on applications in foods It will deal with quality issues related to post mortem processes in animal foods and quality traits for all foods in general as well as the identification of bioactive peptides and proteins which are very important from the nutritional point of view Furthermore consumers are now extremely susceptible to food safety issues and proteomics can provide reassurance with different safety aspects such as food authenticity detection of animal species in the food and identification of food allergens All of these issues will be covered in this book It is also worth noting that both editors are internationally recognized experts in the field of food science and both have edited numerous food science books and handbooks

Animal Sourced Foods for Developing Economies Muhammad Issa Khan, Aysha Sameen, 2018-12-21

Animal products are good source of disposable income for many small farmers in developing countries In fact livestock are often the most important cash crop in many small holder mixed farming systems Livestock ownership currently supports and sustains the livelihoods of rural poor who depend partially or fully on livestock for their income and or subsistence Human population growth increasing urbanization and rising incomes are predicted to double the demand for and production of livestock products in the developing countries over the next twenty years The future holds great opportunities for animal production in developing countries

Animal Sourced Foods for Developing Economies addresses five major issues 1 Food safety and nutritional status in developing world 2 the contribution of animal origin foods in human health 3 Production processes of animal foods along with their preservation strategies 4 functional outcomes of animal derived foods and finally 5 strategies issues and policies to promote animal origin food consumption

Animal sourced food contain high biological value protein and important micronutrients required for optimal body functioning but are regarded as sources of fat that contribute to the intake of total and saturated fatty acids in diet The quality of protein source has a direct influence on protein digestibility as a greater proportion of higher quality proteins is absorbed and becomes available for bodily functions

Animal foods has high quantity and quality of protein that includes a full complement of the essential amino acids in the right proportion

Land availability limits the expansion of livestock numbers in extensive production systems in most regions and the bulk of the increase in livestock production will

come from increased productivity through intensification and a wider adoption of existing and new production and marketing technologies. The significant changes in the global consumption and demand for animal source foods along with increasing pressures on resources are having some important implications for the principal production systems. In this book contributors critically analyze and describe different aspects of animal source foods. Each chapter is dedicated to a specific type of food from animal source, its nutritional significance, preservation techniques, processed products, safety and quality aspects, and conceptual framework. Special attention is given to explain current food safety scenario in developing countries and contribution of animal derived food in their dietary intake. Existing challenges regarding production, processing and promotion of animal source foods are also addressed with possible solutions and strengthening approaches.
