Food, Nutrition and Sports Performance III Ronald J. Maughan, Susan M. Shirreffs, 2013-08-21. As sport has become more professionalised over the last thirty years, so the role of nutrition in promoting health and performance has become ever more important to athletes who search for the extra edge to succeed in their respective sports. With the expansion in the provision of medical and scientific support services in elite sport, those who advise athletes have had to become adept at

identifying those dietary strategies that will help them to outperform their competitors This book is structured in two parts The first analyses the science that underpins the nutritional goals of athletes with a focus on the implications for athletes during training competition and recovery The second looks more closely at the practical implications for different sport categories i e those that focus on strength power or endurance and on weight category sports team sports and winter sports This volume will be of value to sports dieticians and nutritionists and others involved in the care and support of athletes as well as to those who take an interest in the subject of sport nutrition and competitive performance Coaches and athletes will also find much of interest here This book is based on the proceedings of the third in a series of Consensus Conferences in Sports Nutrition organised under the auspices of the International Olympic Committee It was published as a special issue of the Journal of Sports Sciences

Personalized Sport and Exercise Nutrition Wim Derave, Bryan Saunders, Ahmed El-Sohemy, 2019-10-18 Personalization is a key term when talking about the future of all medical disciplines including nutrition and more specifically sport nutrition The prospect of better tailored and more effective sport nutrition sounds appealing but the research in personalized sport nutrition is somewhat lacking Emerging evidence indicates that sport nutrition supplements and strategies may work in some individuals or under certain conditions yet not in others Research on novel ergogenic performance enhancing dietary approaches is often inconclusive because we fail to understand the environmental and genetic factors impacting the inter individual responses to their intake and metabolism These scientific hurdles need to be cleared before we can move to genetic or other screening tests to tailor sport supplement and macro and micronutrient intake advice This Research Topic provided a platform for original data and reviews on novel strategies for personalized sport and exercise nutrition resulting in a diverse selection of published articles in the area
