Nutrition In The Infant:

Infant Nutrition B. A. Rolls, Ann Walker, 2013-11-11 Few people doubt that the mother's milk provides the best food for the full term infant during the first few months of life when the digestive absorptive and excretory systems are relatively immature. The development of the digestive enzymes is detailed in Chapter 4. The significance of this immaturity first emerged as a consequence of the pioneering work of Professor Robert McCance and Dr Elsie Widdowson in human nutrition when they studied the electrolyte and nitrogen excretion of babies and young animals. To quote Professor McCance: 'Inefficient though the kidneys were by adult standards they were capable of maintaining homeostasis provided the infant and animals were growing while being fed on food of exactly the right composition that is the milk of the mother' (Ashwell 1993). One should not forget that although the mother protects the developing baby against much nutritional abuse the baby may be still be affected by maternal nutrition and this is discussed in Chapter 2. The superior qualities of breast milk are still recognized and research continues to discover yet more factors in breast milk significant to the health of the baby for possible inclusion in formulas. The immature stage of development of the baby means that while enough nutrients for optimal growth of all tissues are required excessive quantities may cause intoxication. Tight specifications are essential since unlike the adult the newborn depends on a single food.

Nutrition in the Infant Victor R. Preedy, George Grimble, Ronald Ross Watson, 2001-01-04 This book is a comprehensive account of nutrition in the infant written by a team of international experts. It is divided into a number of sections: i assessments incidence and diagnosis of nutritional disorders ii enteral and parenteral nutrition iii micro and macro nutrients iv diet and support in disease v developmental theoretical and educational aspects and each chapter is divided into key areas for ease of quick reference. A unique feature of the book is a series of summary tables which identify treatment regimens formulations doses and step by step practical guidelines.

Nutrition in Infancy Ronald Ross Watson, George Grimble, Victor R. Preedy, Sherma Zibadi, 2012-12-02 Nutrition in Infancy Volume 1 is a very useful resource for all clinicians treating and preventing nutritional problems in infants. This volume covers a wide range of topics that support wellness in infants through the prevention and treatment of infectious diseases malnutrition and developmental and genetic abnormalities. A variety of chapters deal with nutrients for infants with disabilities surgery and other special needs. Special emphasis is provided for clinicians treating the millions of children in developing countries whose death is promoted by undernutrition or malnutrition. The next sections discuss the health benefits of supplementation and breast feeding and methods to improve use of breast feeding and its duration. In Nutrition in Infancy Volume 1 all of these facets of nutrition and nutritional therapy are covered in a precise and practical way. The latest developments in diagnostic procedures and nutritional support are also included. Written by a group of international experts this volume is an indispensable new reference for clinicians with an interest in the nutrition and health of pregnant mothers and their infants.

Nutrition Support for Infants and Children at Risk Richard J. Cooke, Yvan Vandenplas, Ulrich Wahn, 2007 Adequate nutrition is especially important during infancy and childhood where even short periods of malnutrition have long lasting effects on growth development and health in adult life There are several high risk scenarios for the development of malnutrition which are the focus of the current publication Atopic diseases gastrointestinal disorders and preterm delivery For the pediatric allergist it is important to understand the mechanisms regulating IgE responses to food proteins since they may also be the earliest markers for the atopic march As breastfeeding seems to have only limited effects regarding the atopic march other measures to modulate infantile immune responses have to be taken including the use of hypoallergenic formulae or the addition of probiotics or prebiotics to infant formulae The second part of this book highlights the functional properties of nutrition with regard to diseases of the gastrointestinal tract and the ensuing chronic alterations of gastrointestinal function Topics addressed include the molecular basis of some diseases main causes of and nutritional measures in chronic enteropathy including the role of parenteral and enteral nutrition stressed mucosa and the role of nutrition in cholestatic liver disease Nowadays smaller and more immature infants are surviving but the smaller the infant the greater the accrued deficit as nutritional needs change with advancing maturity and one formulation may not meet all requirements Furthermore there are no sensitive accurate and precise measures of nutritional outcome The net effect of these uncertainties is that all very low birth weight infants are growth retarded at hospital discharge Strategies for improving growth in these high risk infants are at the center of the last part of this publication

Feeding and Nutrition of Infants and Young Children Kim Fleischer Michaelsen, 2000-01-06 Optimum nutrition and good feeding of infants and young children are key determinants of their health growth and development both physical and mental Good feeding practices will prevent malnutrition and early growth

retardation which is still common in some parts of the World Health Organization European Region This publication contains the scientific rationale for the development of national nutrition and feeding recommendations from birth to age three years The guidelines and recommendations are designed for the WHO European Region with emphasis on the countries of the former Soviet Union They are especially applicable to the most vulnerable groups of infants and young children living in deprived conditions mainly in Eastern Europe but also in ethnic minority and low income groups in Western Europe
