Office of the Surgeon General, 1988 *Nutrition Education in U.S. Medical Schools* National Research Council, Division on Earth and Life Studies, Commission on Life Sciences, Food and Nutrition Board, Committee on Nutrition in Medical Education, 1985-02-01 As the general public has become more aware of advances in nutrition consumer demands for advice on matters of diet and disease have grown This book offers recommendations to upgrade what were found to be largely inadequate nutrition programs in U S medical schools in order that health professionals be better qualified to advise and treat their patients A comprehensive study of one third of American 4 year undergraduate medical schools provided

information on the current status of nutrition programs at each school Conclusions were drawn and recommendations made from analysis of this gathered information Questions examined in this volume include Has medical education kept pace with advances in nutrition science Are medical students equipped to convey sound nutritional advice to their patients What strategies are needed to initiate and sustain adequate teaching of nutrition in medical schools **Diet and Drug**

Interactions Daphne A. Roe,2012-12-06 When we learn from a patient clinician or medical record that a drug has been discontinued it is logical to ask why The drug may no longer be needed it may not have produced the desired effect it may have produced an adverse reaction a better drug may be available to replace the original drug The patient may have discontinued the drug because he or she could not see why it was necessary or the patient may have discontinued the drug because of unpleasant side effects A drug may not work because its absorption is reduced by physical or chemical interaction with another drug or a food component It may also not work because the patient s metabolism is speeded up or inhibited to an extent such that the desired duration of drug action is not obtained Such an effect may be related to a change in diet Side effects may be related to consumption of specific foods or beverages or to an overall change in nutritional status Drug food and drug alcohol incompatibility reactions are frequent but are avoidable if a patient is warned of their possible occurrence Drugs may also produce nutritional deficiencies especially in a patient whose diet is marginal in those nutrients depleted by the particular drug Careful prescribing practices together with appropriate nutrient supplements will serve to reduce the risk of these incompatibilities *Biological Interrelations and Nutrition* J.
