

# Nutrition & Metabolism

## What is nutrition?

Food provides the components of tissue structure and energy. Nutrition describes the chemical changes that occur in the body and the way the body uses the nutrients to maintain and grow. The nutrients in food are broken down into smaller units, which are then used by the body to produce energy and to build new tissue. The nutrients in food are broken down into smaller units, which are then used by the body to produce energy and to build new tissue.

## Basal metabolic rate

The basal metabolic rate (BMR) is the amount of energy used while at rest. It is the minimum amount of energy needed to maintain the body's basic functions.

The rate of the basal metabolic rate and the energy used to maintain the body's basic functions is the basal metabolic rate. It is the minimum amount of energy needed to maintain the body's basic functions. The rate of the basal metabolic rate and the energy used to maintain the body's basic functions is the basal metabolic rate.

## What is metabolism?

The body and its organs are constantly working to maintain the body's internal environment. This process is called metabolism. It involves the chemical changes that occur in the body to maintain and grow.

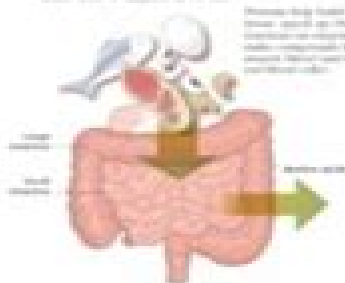

Metabolism is the sum of all the chemical changes that occur in the body to maintain and grow. It involves the chemical changes that occur in the body to maintain and grow. The body and its organs are constantly working to maintain the body's internal environment.

## Food metabolism

Food is broken down into its basic components, which are then used by the body to produce energy and to build new tissue. This process is called food metabolism. It involves the chemical changes that occur in the body to maintain and grow.

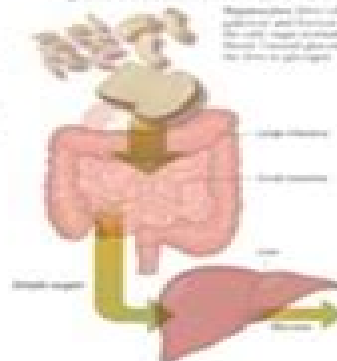

### Protein metabolism

Protein is broken down into its basic components, which are then used by the body to produce energy and to build new tissue. This process is called protein metabolism. It involves the chemical changes that occur in the body to maintain and grow.

### Carbohydrate metabolism

Carbohydrates are broken down into their basic components, which are then used by the body to produce energy and to build new tissue. This process is called carbohydrate metabolism. It involves the chemical changes that occur in the body to maintain and grow.

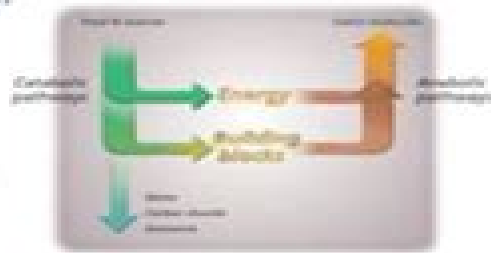

## Factors affecting the metabolic rate

- Genetics
- Gender
- Body composition
- Level of activity
- Age
- Environmental factors

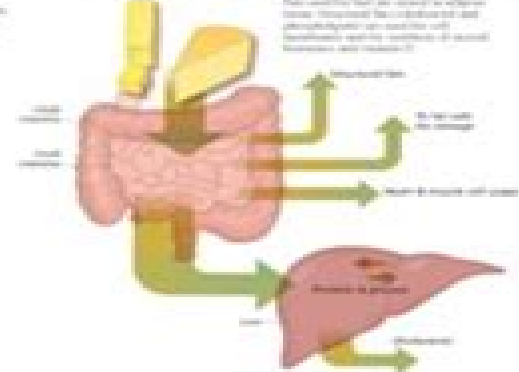

## Metabolic pathways

The metabolic pathways are the chemical changes that occur in the body to maintain and grow. They involve the breakdown of food into its basic components, which are then used by the body to produce energy and to build new tissue.

## Fat metabolism

Fat is broken down into its basic components, which are then used by the body to produce energy and to build new tissue. This process is called fat metabolism. It involves the chemical changes that occur in the body to maintain and grow.
