This is the first crystal book that combines the sought after metaphysics of the crystal world with the practicality of how to select source care for and curate the reader's growing crystal collection. Crystal collecting and caring for those collections continues to be a core practice of the mind body spirit space. In this unique book, author Jillian Aurelia Green guides readers down the path to creating a crystal collection that speaks to the soul. With mindful practice at its centre, *The Crystal Collector* explores every facet of the crystal collecting world while providing inspiring and creative ways to enjoy crystals. Organized into three main sections, Part One offers a behind the scenes look at how crystals are mined, how to differentiate between counterfeit and natural stones, the best avenues for adding to one's collection, and how to source crystals ethically and sustainably. Part Two, the heart of the book, offers beginners and enthusiasts alike an easy reference to potential crystal collections, whether one is more interested in the scientific mineral type, geologically curious crystalline features, or by intentional properties. Part Three spotlights how to care for different types of crystals and how to organize, curate, and utilize the stones and minerals in one's collection, whether it's the very first or the 100th addition. Beautiful photographs along with tips provide inspiration on how to organize and display crystal collections, while crystal grids offer ways to showcase one's crystals with purposeful intention. This is the definitive guide to creating an ethically sound and mindfully focused crystal collection that will stay with the reader for life, with something new to discover on every reading. An essential reference book as well as a source for finding new ways to experiment with showcasing a crystal collection, *The Crystal Collector* is a must-have book.

***Tissue Engineering for the Heart*** Ravi Birla, 2016-09-26. This book covers the fundamentals of tissue engineering for the heart, starting with the basics of organ generation, sensors in tissue, and organ fabrication, and the current state of the art in stem cell engineering for the heart. With this foundation in place, the remaining chapters focus on specific aspects of the cardiovascular system, starting with heart muscle, then biological pumps, followed by bioartificial ventricles, and finally bioartificial hearts. Throughout the course of this book, twenty-two in-depth case studies are presented. Each case study has been selected to illustrate specific design schemes for tissue and organ fabrication. This is an ideal book for upper-level undergraduate and graduate students studying tissue engineering and organ regeneration, especially those focused on cardiac regeneration. This book also includes twenty-two case studies that illustrate specific design schemes for engineering the heart. Provides open-ended discussion questions at the end of each chapter, as well as a detailed reference list to encourage further research and reading. Covers the basics of organ fabrication, as well as sensor technology and genetic engineering as they relate to tissue and organ fabrication.
