Buyer's Guide For Building a Computer

If you're a fanatic about building computers and want to know what types of parts to get, this page is for you. I'm sure that you will find this page interesting and you may just want to go out, get the parts from a store, or salvage them from the junkyard. Feel free to add information on new products (especially CPUs), and don't be biased towards one brand unless you have actual evidence or personal experience, and if you have that, please mention it.

Note to the reader: this book supplements one other Wikibook titled "How To Build A Computer".

1 Building a computer

This supplement is designed to help readers understand the methods on what is needed in order to build a computer. I will break down each part definition and then talk about ways to pick each part that all relate to the target of what the machine is being built for.

1.1 Why build?

Why build vs. buy?

- Hobby
- Unique
- Cost

What do you want to use it for?

- Extreme Gaming
- Business / Office / Technical use
- Video / Photo / Music Editing
- Multimedia / Home Theater / DVR
- Server

1.2 Background and planning

When building a computer there are many things to consider. Budget, quality, brand warranty and support, value, needs VS wants, performance, expandability, types of software that will run on the computer and many other things. When designing a system it is important to look at each part of the decision making process as noted above. Let us look at each area of focus:

1.3 Budget

When determining the budget of what is needed, when picking computer parts, it is very important to set the expectation upfront. Costs can exceed planned budgets very quickly so I would suggest being careful and realistic on what you plan to spend. Good references to understanding costs would be to use resources such as computer shopper magazine or visit a local computer parts store website to get a general idea. Even visit a local store to window shop. What might be easier is assume that an already assembled machine would be about 2/3 the cost starting, on a system that you build yourself. This is assuming that you are able to find an off the shelf product that has your requirements, but want to take it further by building one from scratch.

1.4 Quality

The subject of quality is very difficult since everything more or less is made outside the USA, usually at factories in China. What it comes down to is the track record overall of the company. Then follows the purpose of the product and product features. A big issue that occurs with trying to define quality electronics is having no knowledge of what a quality part is supposed to look like. People tend to rely on stuff they read on forums, but what is difficult is forums are anonymous so anyone who likes to talk whether accurate or not will post their comments and make it sound like they are an expert. The other side of the coin is you can review the Manufacturer's website, but the problem you generally run into is the bias perspective of a company who is marketing its own products. The other issue is you cannot necessarily look at the parts and know, since most of you might be unaware of what you are looking at. Your best bet is to take in as many resources as possible. Try using the power of the web and see if you can get a broad overview of reviews and perspectives from consumers and hopefully experts. It is not always easy to do. Sometimes you have to take a shot at a company that seems to be very popular for the type of equipment you are buying, and hope that the quality standards are there. Consumer reports are options as well since they are right to the point on trying to find good products. Overall, quality has too different levels: consumer and business. Parts that are rated for business needs are generally more expensive and in some cases higher quality since they require a better record of accomplishment on life expectancy and reliability.
