Sustainable Development and Energy Transition in Europe and Asia Bernadette Hj. Md Mansur,2000 Andreosso-O'Callaghan, Sam Dzever, Jacques Jaussaud, Robert Taylor, 2020-02-19 Asian and European countries have adopted different approaches to the conflicting priorities of economic growth and low carbon emissions In this volume based on the revised versions of papers presented at the 24th International Euro Asia Research Conference held in 2019 the contrasts between the schools of thought of each continent are explored thoroughly Ranging from topics as diverse as city logistics shareholder value and management practices the EU Japan Economic Partnership Agreement Chinas geopolitical insights sustainable agricultural development in India and the empowerment of women in Vietnam via microfinance this book addresses sustainable development policies in China and Southeast Asia from many different perspectives Meeting ,2005 Planning for Sustainable Urban Transport in Southeast Asia Dorina Pojani, 2020-04-20 By now planners everywhere know more or less what the ingredients of a sustainable city are in theory The problem is that only bits of solutions are being implemented in the cities that most need them the majority of which are located in the Global South This book examines issues related to policy transfer in urban transport planning in Southeast Asia The metropolitan regions of four major capitals Jakarta Kuala Lumpur Manila and Bangkok are considered The book assesses the in bound and out bound transfer of sustainable transport planning policies concepts and tools The investigation focuses on who transfers policy and why what elements of policy are transferred in what direction and to what degree and what barriers does transfer face It also discusses how policy transfer processes in the transportation planning arena can be improved Sustainable Urban Logistics Jesus Gonzalez-Feliu, 2018-02-14 Urban logistics has been a subject of interest to researchers and practitioners for more than 20 years in France and Europe and more than 40 in the United States Nevertheless the subject remains difficult to address by a lack of unification in the definitions and proposed methods but also by what makes its great richness the diversity of actors and the pluridisciplinarity of the methods and techniques available This book which synthesizes more than 10 years of personal research on the subject but also experience within different teams and projects intends to bring a unified vision and more and more followed at the international level on logistics planning Urban development It begins with an overview of research in urban logistics and then describes and defines the main components flows actors infrastructures management components technologies regulations and financing actions A unified vision of these elements as well as the definition of sustainable urban logistics is proposed Then the book presents the basics of planning and managing sustainable urban logistics First the basics of the before after analysis are introduced not only for the experiments but also for the simulation of scenarios To carry out this type of analysis two main groups of methods are needed methods for estimating flows and methods for calculating evaluation indicators The book presents the main global standards and dominant models

for the estimation of the urban freight transport demand i e of freight transport needs in urban areas Then it presents the methods for estimating and simulating transport and distribution schemes i e transport supply as well as a proposal for integrated supply demand modeling All these methods are presented for immediate application to practitioners accompanied by summary tables and parameters necessary for their implementation As far as evaluation is concerned the book presents a framework for the choice of sustainable indicators and scorecards Second the main methods for economic environmental social and accessibility assessment are presented They are accompanied by tables and figures necessary for their implementation Finally the main applications of the proposed methods are introduced The book is meant to be a practical guide to applying the main methods from scientific research to a practical context and presents examples of quantified and explained application It is thus the first book that summarizes and presents the main unified methods to help the different decision makers to implement them in their actions of planning and management of the urban logistics and the transport of goods in town
