Questioning Technology Andrew Feenberg, 2012-08-21 In this extraordinary introduction to the study of the philosophy of technology Andrew Feenberg argues that technological design is central to the social and political structure of modern societies Environmentalism information technology and medical advances testify to technology's crucial importance In his lucid and engaging style Feenberg shows that technology is the medium of daily life Every major technical change reverberates at countless levels economic political and cultural If we continue to see the social and technical domains as being separate then we are essentially denying an integral part of our existence and our place in a democratic society *Questioning Technology* convinces us that it is vital that we learn more about technology the better to live with it and to manage it

Questioning Technology John Zerzan, Alice Carnes, 1991 *Kierkegaard and the Question Concerning Technology* Christopher B. Barnett, 2019-08-22 Over the last several decades technology has emerged as an important area of interest for both philosophers and theologians Yet despite his status as one of modernity's seminal thinkers Søren Kierkegaard is not often seen as one who contributed to the field *Kierkegaard and the Question Concerning Technology* argues otherwise Christopher B. Barnett shows that many of Kierkegaard's criticisms of the present age relate to the increasing dominance of technology in the West and he puts Kierkegaard's thought in conversation with subsequent thinkers who grappled with technological issues from Martin Heidegger to Thomas Merton Barnett shows that Kierkegaard's writing with its marked emphases on personal upbuilding stands as a place where deeper non technical modes of thinking are both commended and nurtured In doing so Barnett presents a Kierkegaard who remains relevant perhaps all too relevant in today's digital age

Democratizing Technology Tyler J. Veak, 2012-02-01 Largely because of the Internet and the new economy technology has become the buzzword of our culture But what is it and how does it affect our lives More importantly can we control and shape it or does it control us In short can we make technology more democratic Using the work of Andrew Feenberg one of the most important and original figures in the field of philosophy of technology as a foundation the contributors to this volume explore these important questions and Feenberg responds In the 1990s Feenberg authored three books that established him as one of the leading scholars in a rapidly developing field and he is one of the few to delineate a

theory for democratizing technological design He has demonstrated the shortcomings of traditional theories of technology and argued for what he calls democratic rationalization where actors intervene in the technological design process to shape it toward their own ends In this book the contributors analyze foundational issues in Feenberg s work including questions of human nature biotechnology gender and his readings of Heidegger and they also examine practical issues including democratizing technology moral evaluation and environmentalism **Questioning Technology** Karen Ann Ferneding,2003

This book revisits current technocentric educational reform policy and examines the meaning of educational reform within the context of a technological society and globalized market economy Having colonized the politics of educational reform technocentrism has narrowed the social space of educational reform discourse by invalidating alternative social visions germane to the tradition of social justice and the development of a civic society This book interrogates current technocentric discourse through the voices of educators who engage in the practice of questioning technology and raises significant issues regarding the dominance of a technology based reform agenda techno utopianism as a dominant social vision and the positioning of teachers within school cultures reconfigured by control technologies and performativity Educators need to create a deliberative approach to technology adoption for only by assuming a more questioning stance toward the adoption of technological innovations can we hope to avoid technological determinism and take responsibility for the consequences of our inventions **Questioning Technology** John Zerzan,Alice Carnes,1988 **Touching Thought** Ellen

Mortensen,2003-04-01 The blindness to ontological questioning in feminist theory has left a lacuna in scholarly study that Touching Thought a study at the intersection of ontological meditation and feminist theorizing on sexual difference seeks to fill Ellen Mortensen s new work critiques the language and theoretical pathways of contemporary feminist theorists such as Judith Butler Rosi Braidotti Elizabeth Grosz Luce Irigaray Theresa de Lauretis and Donna Haraway to reveal a problematic predilection for technological language at the expense of ontological inquiry The volume ranges across feminist epistemology and ethics the politics of performativity the aesthetics of body power and the question of sexual difference and concludes with an examination of the different philosophical and theoretical attempts at undertaking an ontological questioning of sexual difference This foundational work will serve as preparation for scholars of feminist and queer theory and continental philosophy seeking alternative pathways of feminist thought that encourage fundamental thinking on the subject of individual freedom Technology and the Philosophy of Religion David Lewin,2010-09-13 The last one hundred years has seen

unimaginable technological progress transforming every aspect of human life Yet we seem unable to shake a profound unease with the direction of modern technology and its ideological siblings global capitalism and massive consumption Philosophers such as Marcuse Borgmann and especially Heidegger have developed important analyses of technological society however in this book David Lewin argues that their ideas have remained limited either by their secular context or by the narrow conception of religion that they do allow This study guides the reader along the newly formed paths of the

philosophy of technology arguing that where those paths come to an abrupt end a religious discourse is needed to articulate the ultimate concerns that drive technological action It calls for a meditation on the central insight of many religious traditions that in an ultimate sense we know not what we do To acknowledge that we know not what we do is the first step towards a theology of technology that draws upon insights from the mystical theological tradition as well as from recent developments in the continental philosophy of religion **Inquiring Minds Want to Learn** Erik M. Creating Value with Science and Technology Eliezer Geisler, 2001-08-30 Do science and technology create value for society and the economy and how might one go about measuring it How do we evaluate its benefits Can we even be certain that there are benefits Geisler argues that there are benefits and that they outweigh in value the negative impacts that inevitably accompany them His revolutionary new book goes on to show that they can also be measured and evaluated and in one volume all of the existing knowledge on how to do it is compiled then Geisler's own methods are offered The result is a compelling argument that the value of science and technology in our lives has indeed been positive and that the economic well being of all individuals organizations and nations rests upon them Geisler starts off by describing his conceptual framework for the evaluation of science and technology and the impact and benefits that proceed from them He discusses the nature of evaluation in general terms and then in the specific context of science technology and innovation together He reviews the state of our present knowledge and assesses the nature of value creation itself Throughout Geisler remains fixed on his driving thesis Although there are certainly some negative impacts from science and technology on the whole the results of its outputs are positive He shows how they have contributed to a range of activities and institutions particularly to the improvement of health and human welfare worldwide Finally after discussing the theories of evaluation he gets down to the practice providing readers with a way to assess science and technological innovations for themselves
