Reproductive Biology Of South American Vertebrates:

Reproductive Biology of South American Vertebrates William C. Hamlett, 2012-12-06 South America is one of the few areas of the world that includes vast areas of as yet undisturbed natural habitats. These areas are home to as many as half the world's species of plants and animals. Many of the animals inhabiting these areas are of direct and immediate economic importance while others are of unknown potential value. With economic development of these areas, there is a coincident disruption of natural habitats that have a direct impact on the reproductive capabilities of the affected species. Reproduction is central to the survival of all species and regardless of the environmental stresses imposed on them, scientific attention must be focused on reproductive biology as a way to deal with these pressures. It is vitally important to gather as much research data as possible on the reproductive biology of the species on this continent in order to provide governmental agencies and scientists with the most accurate information on which to base decisions regarding development. This volume is intended to draw attention to these pressing matters by gathering a wide representation of scientists actively engaged in reproduction research relating to South American vertebrates. It is intended that this volume will serve as a resource for individuals and organizations interested in reproductive biology and species survival. An additional benefit is that economically important species as well as potentially important ones such as sharks will be discussed.

Conservation of Caribbean Island Herpetofaunas Volume 2: Regional Accounts of the West Indies Adrian Hailey,Byron Wilson,Julia Horrocks,2011-04-07 Most of the islands of the Caribbean have long histories of herpetological exploration and discovery and even longer histories of human mediated environmental degradation Collectively they constitute a major biodiversity hotspot a region rich in endemic species that are threatened with extinction This two volume series documents the existing status of herpetofaunas including sea turtles of the Caribbean and highlights conservation needs and efforts Previous contributions to West Indian herpetology have focused on taxonomy ecology and evolution particularly of lizards This series provides a unique and timely review of the status and conservation of all groups of amphibians and reptiles in the region This volume provides regional accounts of the islands of the West Indies biogeographic region

The reproduction and development of sharks, skates, rays and ratfishes Leo S. Demski,John P. Wourms,2013-06-29 This volume had its origin in a symposium on the Reproduction and Development of Cartilaginous Fishes that was held at the annual meetings of the American Elasmobranch Society and the American Society of Ichthyologists and Herpetologists in Charleston South Carolina in 1990 The cartilaginous fishes class Chondrichthyes are a large and diverse group of fishes that include approximately 900 to 1100 living species of sharks skates rays and ratfishes Throughout their history which dates back at least 400 million years they have been a successful major component of the marine ecosystem The chondrichthyan fishes occupy a pivotal position in comparative and evolutionary studies of vertebrate reproduction and development They are the oldest surviving group of jawed vertebrates and they possess both the adult vertebrate Bauplan and the vertebrate program of embryonic development The major features of the female reproductive system including its embryonic origin structure physiological function and biochemistry apparently were established early in vertebrate evolution and are fully developed in chondrichthyan fishes These features of the female reproductive system have been retained during the evolution of the other classes of vertebrates Much the same can be said for the male reproductive system Moreover viviparity placental nourishment of developing embryos and the hormonal regulation of these events made an initial appearance in this group The 22 articles presented in this volume bring together a wide variety of complementary research by investigators from seven countries allowing us to

broaden the scope and implications of our studies while identifying opportunities for future research The appearance of a volume on the reproduction and development of cartilaginous fishes is quite opportune The continued existence of these fishes which survived the great extinction events of Earth s history is now threatened by overexploitation unless immediate steps for their conservation are undertaken Knowledge of their reproduction and development not only is an end in itself but is of critical importance in devising successful conservation and resource management strategies **Wild Mammals of North America** George A. Feldhamer, Bruce C. Thompson, Joseph A. Chapman, 2003-11-19 Table of contents

Herpetology Laurie J. Vitt, Janalee P. Caldwell, 2008-12-15 This third edition now fully revised and updated by two of Dr Zug s colleagues provides herpetology students and amateur reptile and amphibian keepers with the latest taxonomy and species developments from around the world Herpetology is a rapidly evolving field which has contributed to new discoveries in many conceptual areas of biology The authors build on this progress by updating all chapters with new literature graphics and discussions many of which have changed our thinking With a new emphasis placed on conservation issues Herpetology continues to broaden the global coverage from earlier editions recognizing the burgeoning reptile and amphibian research programs and the plight of many species in all countries and all biomes New information on the remarkable advances in behavioral physiological and phylo geographical data provide students with the current research they need to advance their education and better prepare their future in herpetology Mammals of the Neotropics, Volume 3 John F. Eisenberg, Kent H. Redford, 1989 This volume provides a survey and synthesis of current knowledge of the more than 650 species of land and marine mammals found in Ecuador Peru Bolivia and Brazil as well as information on the mammalian fossil record current biodiversity and biogeography of this region Chapters present up to date taxonomic information ecological and behavioral characteristics conservation status and distribution maps for most species Copyright Libri GmbH All rights reserved

Fishes of the Amazon and Their Environment A.L. Val, V.M.F. de Almeida-Val, 2012-12-06 The Amazon is a giant piece of amphibian land which is the result of complex geological and evolutionary processes The number of living beings in such a land is difficult to estimate The interactions between these organisms and the environment are fascinating but barely understood These features lured us to the Amazon in 1981 However soon after we realized that the dimensions of these interactions were overwhelming This book is designed to review aspects of the physiology and biochemistry of fishes of the Amazon The description of the pulsative nature of the environment and the distinct features of the ichthyofauna of the Amazon were central to the main goal Nevertheless any complete view is limited by the magnitude of the intraspecific variability coupled with the complex fluctuations of the environment Thus we have placed an emphasis on respiratory physiology and biochemistry The reference list was made as complete as possible particularly regarding special publications not readily available We hope that this book is useful for comparative physiologists tropical biologists and the people interested in interactions between organisms and their environment We are grateful to many people who contributed to the

making of this book Our initial ideas were influenced by Drs Arno Schwantes Maria Lufza Schwantes Jose Tundisi Anna Emflia Vazzoler and Naercio Menezes Information and Technology Report ,1995 American and Australasian Marsupials Nilton C. Cáceres,Christopher R. Dickman,2023-06-30 This book focuses on the evolution biogeography systematics taxonomy and ecology of New World and Australasian marsupials greatly expanding the current knowledge base There are roughly 140 species of New World marsupials of which the opossum is the best known Thanks to recent research there is now an increasing amount of understanding about their evolution biogeography systematics ecology and conservation in the Americas especially in South America There are also some 270 marsupial species in the Australasian region many of which have been subject to research only in recent years Based on this information and the authors extensive research this book provides comprehensive insights into the world s marsupials It will appeal to academics and specialized researchers students of zoology paleontology evolutionary biology ecology physiology and conservation as well as interested non experts
