**Reproductive Physiology of Marsupials** C. Hugh Tyndale-Biscoe, Marilyn Renfree, 1987-01-30 The results of this compilation of new research on the reproductive physiology of marsupials reveal much about their patterns of reproduction and evolution in comparison to monotremes and eutherians Reproductive Physiology of Marsupials Hugh Tyndale-Biscoe, Marilyn Renfree, 1987-01-30 Marsupials differ from most other mammals in their method of reproduction in that they have chosen in an evolutionary sense to develop lactation rather than placentation for the nurture of their young The neonate is therefore born with a mixture of advanced and embryonic characters and yet is readily accessible within the pouch providing a unique system for the study of the ontogeny of various physiological and endocrinological parameters Marsupials are therefore ideal animals for research into mammalian reproductive physiology The results of this exciting new research are summarized in this book by two of the foremost workers in the field Individual chapters analyse the genetic and hormonal control of sexual differentiation male and female reproductive structures and their functions the role of the corpus luteum in the oestrous cycle and pregnancy the hormonal control of embryonic diapause and the role of the marsupial placenta in the development of the embryo This book is more than just a straightforward review of marsupial reproduction for its detailed analyses and broad comparative coverage will attract mammalogists and reproductive physiologists with a wide range of research interests **Marsupial Biology** Norman Saunders, Lyn Hinds, 1997 Marsupial Biology developed from contributions commissioned from those attending an international symposium held in honour of Hugh Tyndale Biscoe Australia's most celebrated marsupial biology authority and co author of the previous leading marsupial biology text published more than 15 years ago The book does not comprise papers of narrow focus read at the symposium but chapters reviewing the knowledge in each key area written to a book format It has been tightly edited to ensure a great degree of harmony and is suitable as a comprehensive reference text for graduate and undergraduate students **Evolutionary History of the Marsupials and an Analysis of Osteological Characters** Frederick S. Szalay, 1994 Examines a variety of problems in the understanding of the evolutionary history of the marsupials In reviewing the evidence from bones the author presents much new information on both living and fossil groups of marsupials All groups of marsupials are treated in detail and in the final chapter their history in space and time and their palaeobiogeography are considered **The Neurobiology of Australian Marsupials** Ken Ashwell, 2010-10-14 Australian marsupials represent a parallel adaptive radiation to that seen among placental mammals This great natural experiment has produced a striking array of mammals with structural and behavioural features echoing those seen among primates rodents carnivores edentates and ungulates elsewhere in the world Many of these adaptations involve profound evolutionary changes in the nervous system and occurred in isolation from those unfolding among placental mammals Ashwell provides the first comprehensive review of the scientific literature on the structure and function of the nervous system of Australian marsupials The book also includes the first comprehensive

delineated atlases of brain structure in a representative diprotodont marsupial the tammar wallaby and a representative polyprotodont marsupial the stripe faced dunnart For those interested in brain development the book also provides the first comprehensive delineated atlas of brain development in a diprotodont marsupial the tammar wallaby during the critical first 4 weeks of pouch life *Studies in the Reproductive Physiology of Male Marsupials* Francis Norman Carrick,1977

Marsupial Genetics and Genomics Paul D. Waters,Janine E. Deakin,Jennifer A. Marshall Graves,2010-08-05 Marsupials belong to the Class Mammalia sharing some features with other mammals yet they also possess many unique features It is their differences from the more traditionally studied mammals such as mice and humans that is of greatest value to comparative studies Sequencing of genomes from two distantly related marsupials the short grey tailed opossum from South America and the Australian tammar wallaby has launched marsupials into the genomics era and accelerated the rate of progress in marsupial research With the current worldwide concern for the plight of the endangered Tasmanian devil marsupial genetics and genomics research is even more important than ever if this species is to be saved from extinction This volume recounts some of the history of research in this field and highlights the most recent advances in the many different areas of marsupial genetics and genomics research **Walker's Marsupials of the World** Ronald M. Nowak,2005-09-12 Authoritative and engaging this volume from the Walker s Mammals series focuses on marsupials pouched animals whose unusual method of reproduction between egg laying and placental birth places them in a unique category among mammals A comprehensive guide to the biology and distribution of marsupials this book includes common and scientific names size and physical traits habitat and ecology behavior and social interactions reproduction life span and conservation The text is coupled with illustrations from the collections of leading photographers and the world s greatest museums An introduction by marsupial expert Christopher R Dickman describes the evolution and current status of marsupials and reveals why they add so much intrigue to the natural world *Marsupial and Placental Mammal Species in Environmental Risk Assessment Strategies* Marcelo L Larramendy,Guillermo Eli Liwyszyc,2022-06-24 With the expansion of human settlements and the environmental changes brought on by human activity and pollutants toxicology and risk assessment of mammal species is becoming increasingly of interest to toxicologists involved in environmental research This book focuses specifically on environmental risk assessment in marsupial and placental mammals Marsupial ecotoxicology is poorly understood in scientific research and as such environmental risk assessment in marsupials is an area of rapidly growing interest This book will be an ideal companion to toxicologists and ecologists interested in risk assessment in the environments of mammals Particularly those with an interest in the impact introduced by human activity The book will also be of interest to those working in conservation biology biological invasion biocontrol and habitat management *Mammal Phylogeny* Frederick S. Szalay,Michael J. Novacek,Malcolm C. McKenna,2012-12-06 The roots of this book and its sister volume Mammal Phylogeny Placentals go back to discussions and plans shelved for a while between F S Szalay and W P Luckett during the international

and multidisciplinary symposium on rodent evolution sponsored by NATO July 26 1984 in Paris That conference organized by W P Luckett and J L Hartenberger the proceedings of which were published in 1985 proved an inspiring experience to all of the participants as this was repeatedly expressed both during and after the meetings In addition to issues relating to rodents general theoretical topics pertaining to the evolutionary biology and systematics of other groups of mammals regularly surfaced during the presentations and discussions M J Novacek who was also a participant in the rodent symposium shared with Luckett and Szalay the enthusiasm acquired there and he also expressed strong interest for a meeting on mammal evolution with a general focus similar to that of the rodent gathering In 1988 Szalay and Luckett after having planned in detail a program direction and core list of participants were awarded a 30 000 grant by the Alfred P Sloan Foundation through the Research Foundation of the City University of New York The grant was contingent upon obtaining additional funds sufficient to assure that the symposium would be held Raising the remaining funds proved to be a problem

American and Australasian Marsupials Nilton C. Cáceres, Christopher R. Dickman, 2023-06-30 This book focuses on the evolution biogeography systematics taxonomy and ecology of New World and Australasian marsupials greatly expanding the current knowledge base There are roughly 140 species of New World marsupials of which the opossum is the best known Thanks to recent research there is now an increasing amount of understanding about their evolution biogeography systematics ecology and conservation in the Americas especially in South America There are also some 270 marsupial species in the Australasian region many of which have been subject to research only in recent years Based on this information and the authors extensive research this book provides comprehensive insights into the world's marsupials It will appeal to academics and specialized researchers students of zoology paleontology evolutionary biology ecology physiology and conservation as well as interested non experts

**Life of Marsupials** C. Hugh Tyndale-Biscoe, 2005 In *Life of Marsupials* one of the world's leading experts explores the biology and evolution of this unusual group with their extraordinary diversity of forms around the world in Australia New Guinea and South America back cover

**Australian Mammals** Stephen M. Jackson, 2025-06-02 *Australian Mammals Biology and Captive Management* is a complete guide to the husbandry of all groups of Australian mammals This second edition has been updated based on the latest research bringing together current knowledge of the biology and behaviour of each species in captive situations and providing guidance for hand rearing It covers advances from the last 20 years including developments in assisted breeding genetic techniques updated taxonomy and the importance of Australian mammal welfare both physical and mental Written in collaboration with experts in captive management ecology and veterinary science chapters are presented for each taxonomic group of Australian mammals Each chapter covers animal welfare natural history housing requirements general husbandry feeding requirements handling and transport health requirements behaviour breeding and artificial rearing *Australian Mammals* provides practical guidance for zookeepers veterinarians zoologists researchers and students

*Great Transformations in Vertebrate Evolution* Kenneth P.

Dial, Neil Shubin, Elizabeth L. Brainerd, 2015-07-20 How did flying birds evolve from running dinosaurs terrestrial trotting tetrapods evolve from swimming fish and whales return to swim in the sea These are some of the great transformations in the 500 million year history of vertebrate life And with the aid of new techniques and approaches across a range of fields work spanning multiple levels of biological organization from DNA sequences to organs and the physiology and ecology of whole organisms we are now beginning to unravel the confounding evolutionary mysteries contained in the structure genes and fossil record of every living species This book gathers a diverse team of renowned scientists to capture the excitement of these new discoveries in a collection that is both accessible to students and an important contribution to the future of its field Marshaling a range of disciplines from paleobiology to phylogenetics developmental biology ecology and evolutionary biology the contributors attack particular transformations in the head and neck trunk appendages such as fins and limbs and the whole body as well as offer synthetic perspectives Illustrated throughout Great Transformations in Vertebrate Evolution not only reveals the true origins of whales with legs fish with elbows wrists and necks and feathered dinosaurs but also the relevance to our lives today of these extraordinary narratives of change

**Mammalian Evolution, Diversity and Systematics** Frank Zachos, Robert Asher, 2018-10-22 There are nearly 6 000 mammalian species among them our own Research on our evolutionary cousins has a long history but the last 20 years have seen particularly rapid progress in disentangling the interrelationships and evolutionary history of mammals The present volume combines up to date reviews on mammalian phylogenetics with paleontological taxonomic and evolutionary chapters and also summarizes the historical development of our insights in mammalian relationships and thus our own place in the Tree of Life Our book places the present biodiversity crisis in context with one in four mammal species threatened by extinction and reviews the distribution and conservation of mammalian diversity across the globe This volume is the introductory tome to the new Mammalia series of the Handbook of Zoology and will be essential reading for mammalogists zoologists and conservationists alike

**Chemical Signals in Vertebrates 4** David Duvall, Dietland Müller-Schwarze, Robert M. Silverstein, 2012-12-06 This volume reviews recent developments in our understanding of chemical signaling in vertebrates After sections dealing with general principles and chemical aspects of vertebrate pheromones it follows a taxonomic approach progressing from fish to mammals The editors asked a diverse international group of leading investigators working on a wide array of vertebrate taxa and specific issues to consider their efforts from comparative evolutionary and ecological viewpoints The relative number of manuscripts in each part does not necessarily reflect current intensity of research since the editors invited speakers who together would provide a balanced and comprehensive overview while avoiding duplication Still the part on mammals is the longest Fourth in a series dating from 1977 this volume illuminates current trends and likely future developments in the field of chemical signaling in vertebrates Going back even farther the first chapter a personal account of the past quarter century by Dr Mykytowycz recalls the most important milestones such as symposia or the founding of societies and journals He also

credits those investigators who stand out by their seminal studies      Macropods Mark Derek Bruce Eldridge, 2010 A major symposium on macropods kangaroos wallabies and rat kangaroos sponsored by the Australian Mammal Society was held in July 2006 at the University of Melbourne It brought together the many recent advances in the biology of this diverse group of mammals and looked at structure and function neglected macropods population biology and macropod management A total of 78 authors have contributed 34 chapters to the book which concentrates on new developments in macropod biology including topics such as genomics landscape ecology endangered species and fertility control      Cryobanking the Genetic Resource Paul Watson, William V. Holt, 2001-02-16 There is a growing awareness of a worldwide reduction in biodiversity and the urgent need to develop ways to redress the problem This is the first major book devoted to the subject of genetic resource banking GRB and its role in preserving global animal biodiversity In Cryobanking the Genetic Resource expert contributors provide the non specialist with an overview of the subject and the practical techniques associated with GRB The book presents a basic introduction to the concepts and then points the way to relevant literature for those who wish to develop practical applications The first section deals with the potential contribution of GRB to biodiversity protection while the second section offers an introduction to the basic cryobiology of gametes and embryos In the first section genetic considerations for planning interventions are discussed together with disease control measures This section explores related reproductive technologies necessary for the use of cryopreserved gametes and embryos as well as a range of other issues such as ownership and security of stored material and the size and location of cryopreserved material The second section offers a thorough review of the literature on cryopreservation of spermatozoa oocytes and embryos It gathers species into related groups for ease of reference and does not assume extensive specialist knowledge so that newcomers to the field can make the best use of the available research This book is an essential resource for zoologists and conservationists with an interest in genetic management and captive breeding and also for students involved in biodiversity issues conservation and assisted reproduction      Medicine of Australian Mammals Larry Vogelnest, Rupert Woods, 2008-08-18 In Medicine of Australian Mammals more than 30 experts present the most current information available on the medical management of all taxa of Australian native mammals This comprehensive text is divided into two parts The first includes chapters on general topics relevant to the medical management of captive and free ranging Australian native mammals such as veterinary considerations for the rescue treatment rehabilitation and release of wildlife veterinary aspects of hand rearing orphaned marsupials marine mammal strandings and the role of the veterinarian and wildlife health investigation and necropsy of Australian mammals The second part covers the medicine of specific taxa of Australian native mammals Detailed information on taxonomy distribution biology anatomy physiology reproduction husbandry nutrition physical and chemical restraint clinical pathology hand rearing diseases zoonoses therapeutics reproductive management and surgery is included This practical one source reference is complemented by detailed photographs and illustrations as well as tables listing
