## **Reproductive Science And Integrated Conservation:**

Reproductive Science and Integrated Conservation W. V. Holt, 2003 Reproduction is essential to the continuation and evolution of life on this planet and is therefore a centrally important process in the conservation of wildlife However reproductive mechanisms are well understood in only a handful of vertebrate species mostly domestic livestock and laboratory animals This means that attempts to develop and implement management policies for wildlife conservation and especially for endangered species that by definition are difficult to study are often based on poor data or no data at all In *Reproductive Science and Integrated Conservation* leading authorities provide glimpses of reproductive diversity in fishes amphibians reptiles birds and mammals Conservation plans are founded on the assumption that reproduction will be successful but what if it fails This book reviews the many factors that influence reproduction including genetics behaviour and nutrition and experts assess the potential conservation relevance of the recent rapid advances in reproductive technology and medicine *Reproductive Sciences in Animal Conservation* William V. Holt, Janine L. Brown, Pierre Comizzoli, 2014-08-04 Reproductive biology is more than the development of techniques for helping with too little or too much breeding While some of the relevant techniques are useful for individual species technical developments have to be backed up by thorough biological understanding of the background behind the problems This book is therefore threefold 1 it provides a snapshot of the state of the art in terms of species specific reproductive technologies whether for individual animals or whole taxonomic groups 2 it sets the reproductive problems in context and emphasizes the links between animal based problems and the wider world e g reproductive fitness and 3 it looks forward and presents realistic assessments of how effective some of the more recently developed techniques in reproductive technology might be at combating extinctions This is a wide ranging book that will be relevant to anyone involved in reproductive biology or in species conservation and provides them some useful perspectives about the real utility of current and emerging technologies It has contributions from experts in reproduction and related fields **Experimental Approaches to Conservation Biology** Malcolm Gordon, Soraya M. Bartol, 2004-09-13 A volume of essays describing lab and field experiments that improve our understanding or ability to resolve issues surrounding endangered species and invasive plants and animals **The Biology and Conservation of Wild Felids** David Macdonald, Andrew Loveridge, 2010-06-03 The editors utilize their 50 years of combined experience in professional engagement with the behaviour and ecology of wild felids to draw together a unique network of the world's most respected and knowledgeable experts For the first time this interdisciplinary research programme is brought together within a single volume Beginning with a complete account of all 36 felid species there follow 8 comprehensive review chapters that span all the topics most relevant to felid conservation science including evolution and systematics felid form and function genetic applications behavioural ecology management of species that come into conflict with people and control of international trade in felid species conservation tools techniques ex situ management and felid diseases 19 detailed case

studies then delve deeply into syntheses of the very best species investigations worldwide written by all the leading figures in the field These chapters portray the unique attributes of the wild felids describe their fascinating and conflicting relationship with humans and create an unparalleled platform for future research and conservation measures A final chapter analyses the requirements of and inter disciplinary approaches to practical conservation with cutting edge examples of conservation science and action that go far beyond the cat family

**Zoo Conservation Biology** John E. Fa,Stephan M. Funk,Donnamarie O'Connell,2011-08-18 In the face of ever declining biodiversity zoos have a major role to play in species conservation Written by professionals involved in in situ conservation and restoration projects internationally this is a critical assessment of the contribution of zoos to species conservation through evidence amassed from a wide range of sources The first part outlines the biodiversity context within which zoos should operate introducing the origins and global spread of zoos and exploring animal collection composition The second part focuses on the basic elements of keeping viable captive animal populations It considers the consequences of captivity on animals the genetics of captive populations and the performance of zoos in captive breeding The final part examines ways in which zoos can make a significant difference to conservation now and in the future Bridging the gap between pure science and applied conservation this is an ideal resource for both conservation biologists and zoo professionals

**Life in the Frozen State** Barry J. Fuller,Nick Lane,Erica E. Benson,2004-05-10 While it is barely 50 years since the first reliable reports of the recovery of living cells frozen to cryogenic temperatures there has been tremendous growth in the use of cryobiology in medicine agriculture horticulture forestry and the conservation of endangered or economically important species As the first major text on cryobiolog

**Animal Breeding, Welfare and Society** Jacky Turner,2010-08-12 The determination of when how often and with whom an animal breeds is moving rapidly away from evolutionary pressures and towards human purposes these include the breeding of around 50 billion mammals and birds for food production annually the breeding of pedigree dogs and cats racing dogs and horses specialised laboratory animal strains and the use of reproductive science to conserve endangered species or breeds and to limit unwanted populations of pests and non native species But the ethics and sustainability of this takeover of animals reproductive lives have been insufficiently examined by either professionals or the public This book discusses the methods the motivations and the consequences of human intervention in animal breeding in terms of animal health behaviour and well being It explores where we are now and the choices ahead and looks to a future where we have more respect for animals as sentient beings and where we could loosen the reins of reproductive control

**An Introduction to Zoo Biology and Management** Paul A. Rees,2011-03-29 This book is intended as an introductory text for students studying a wide range of courses concerned with animal management zoo biology and wildlife conservation and should also be useful to zookeepers and other zoo professionals It is divided into three parts Part 1 considers the function of zoos their history how zoos are managed ethics zoo legislation and wildlife conservation law Part 2 discusses the design of zoos and zoo exhibits animal

nutrition reproduction animal behaviour including enrichment and training animal welfare veterinary care animal handling and transportation Finally Part 3 discusses captive breeding programmes genetics population biology record keeping and the educational role of zoos including a consideration of visitor behaviour It concludes with a discussion of the role of zoos in the conservation of species in the wild and in species reintroductions This book takes an international perspective and includes a wide range of examples of the operation of zoos and breeding programmes particularly in the UK Europe North America and Australasia Visit [www.wiley.com/go/rees\\_zoo](http://www.wiley.com/go/rees_zoo) to access the artwork from the book

**Advanced Veterinary Topics in Elasmobranchs** Natalie D. Mylniczenko,Alexa Delaune ,Alisa Newton,2025-05-22 Elasmobranchs are a unique group of fishes which are highly emphasized at aquariums they are a guest favourite and of high interest to the general public

Veterinarians working with sharks rays and occasionally chimaeras find themselves challenged because of the wide diversity within the group and the lack of widely published information available in veterinary medicine This special edition aims to do several things 1 significantly contribute data to a generally low publication taxon 2 offer unique case series of disease to help clinicians with diagnosis of disease 3 increase the quality of diagnostics available to veterinarians to improve their case management 4 provide a central location for quality research on elasmobranch veterinary medicine Elasmobranch veterinary care is a poorly published topic yet there are many clinicians doing quality work in shark and ray medicine This special topic provides an impetus for those clinicians to contribute their research with other colleagues in a single resource that veterinarians can easily access Reaching out to those veterinarians and offering them an opportunity to publish in a quality open access journal will be very appealing An initial survey with an aquatic veterinary listserv indicated that at least 10 institutions were interested in collaborating which suggests that the content is there and possibly others have similar research that can be tapped into for this special edition Frontiers in Veterinary Science is offering a special edition for Advanced Veterinary Topics in Elasmobranchs This opportunity will collect multiple topics in shark and ray medicine which will include important baseline data in clinical pathology evaluation of diagnostics that can be accurately used in patient care descriptions of diseases that have not been previously published and sharing techniques with colleagues to elevate the capacity of veterinarians to make diagnoses Manuscripts of interest include Retrospective surveys of disease Baseline data on species previously unpublished bloodwork imaging other Techniques that can advance diagnosis of disease Test and assay validation in elasmobranchs Treatments and strategies for conditions encountered in sharks and rays Reviews of topics that can be helpful for a veterinarian extant topics are largely research or field based
