Reproductive Immunology 1986:

Reproductive Immunology 1986 David Alexander Clark, B. Anne Croy, 1986 **Reproductive Immunology** Lars B. Olding, 2012-12-06 Discrimination of self from nonself is the major function of the immune system and understanding the mechanisms involved a main employer of immunologists Hence the age old puzzle of why a fetus that contains a panel of major histocompatibility MHC antigens derived from its mother and its father is not rejected spontaneously aborted by lymphocytes from its mother who should theoretically recognize foreign MHC molecules from the father has remained of great interest This dilemma has enticed immunologists and developmental biologists for many years This volume was created to present the information currently on hand in this subject to the scientific public The guest editor Professor Lars Olding has a long and distinguished history of contributions in this field having been one of the main proponents of the argument that lymphocytes from the fetus play an active role in this process by suppressing lymphocytes from the mother from proliferating and thereby acting as killer cells His work has defined the phenomenon and identified suppressor molecules factors involved in the process In a different but related chapter Margareta Unander extends such observations to the clinical study of women with repeated habitual mIS carriages *Journal of Reproductive Immunology*, 1991 *Immunology of Pregnancy and its Disorders* C.M. Stern, 2012-12-06 The purpose of this book is to describe the nature of the materno fetal immunobiological relationship and to suggest the direction in which the management of reproduction and its failure in man is moving The several authors who have written about their special fields of interest need to be read within a framework designed to blend their contributions into a whole This preamble provides a part of that framework by describing the early development of the embryo that of the placenta and its membranes and their anatomical relationship with maternal tissues in other words the stage upon which this materno fetal dialogue takes place Professor Maureen Young's tour de force encapsulating the whole of fetal physiology into a single chapter completes the background information After Maureen Young's summary of fetal physiology Matteo Adinolfi describes the development of the immune system in the fetus including new information that allows more accurate speculation concerning the gestational age at which fetal immune responses of various kinds may begin Charles Loke examines the nature of antigens which are found in the placenta concentrating on those which occur on syncytiotrophoblast and suggesting roles for them in fetal development Arnold Klopfer covers the wide range of proteins and hormones which have been studied during pregnancy and found to vary in a potentially significant way He has been careful to distinguish between observation and hypothesis as far as any immunomodulating action is concerned and his analysis is a model of scientific scepticism **The Immunology of the Fetus** Gerard Chaouat, 2020-04-28 First published in 1989 this book provides information on the diagnosis and treatment of neonatal immunodeficiencies It includes a survey on the riddle of the fetal allograft Also discussed in the text are Ontogeny immunological aspects of differentiation and treatment of spontaneous abortion This book is useful to predoctoral students researchers in obstetrics animal husbandry and

reproductive immunology Issues in Reproductive Technology Helen B. Holmes, 1994-08 A remarkable collection of scholarly essays philosophical discussions and ethical arguments concerning reproductive choices Choice It seems as if every week there is a new case involving reproductive technologies that raises provocative often painful questions What policies should be followed by centers that preserve human embryos Are such innovations as Norplant improvements over established methods of contraception Should RU 486 be available in the U S Is prenatal diagnosis an ethically acceptable step to limiting the number of disabled people These are just some of the vital questions explored in this timely work which offers incisive analysis of the plethora of issues raised by advances in reproductive medicine The book's major sections cover abortion contraception cryopreservation of gametes and embryos surrogate motherhood and psychosocial issues of in vitro fertilization In each section introductory essays by recognized authorities such as Elizabeth Bartholet and Andrea L. Bonnickson are followed by critical articles by professionals in such fields as women's health medicine biology sociology politics and philosophy In assessing a technology the authors present well argued analyses of problems created by that technology including views from advocates and practitioners that raise attendant ethical and practical issues National Library of Medicine Current Catalog National Library of Medicine (U.S.), Contraception Research for Today and the Nineties G.P. Talwar, 2012-12-06 The twentieth century will close with 5 billion people added to the current global population Between 1980 and the year 2000 the total world population will increase from 4 billion to over 6 billion There will be half as many more people on earth during these 20 years than the number accumulated since the origin of man to 1980 Overpopulation is particularly acute in economically developing countries where contraception has become a social necessity Contraception Research for Today and the Nineties carries the proceedings of an international symposium convened in New Delhi in October 1986 to review the status of current research in contraception Major organizations supporting basic and applied research in contraception The Population Council World Health Organization WHO The Rockefeller Foundation United States Agency for International Development USAID International Development Research Center of Canada IDRC National Institutes of Health NIH and the Indian Council of Medical Research ICMR were represented by the heads of divisions who projected respective programs and strategies Principal scientists responsible for many of the new leads participated Early Pregnancy Loss Richard W. Beard, Frank Sharp, 2012-12-06 The first few months of any pregnancy are of supreme importance to the success of that pregnancy This statement is so obvious as to be almost a platitude yet it must be said that no aspect of pregnancy has been more neglected in the human than the first three months Little is known of the morphological changes that occur at that time and our knowledge of the mechanisms that control this vital stage of pregnancy is almost nonexistent The explanation for this neglect of what is an obvious area for study is the difficulty of obtaining normal material It is rare to have material to study from a healthy first trimester pregnancy and the study by Hertig and Rock of early conception found by chance in hysterectomy specimens must be unique The information that we

do have about early pregnancy is mostly gained from animal studies or single miscarriages in humans Chromosomal defects are common but are not an explanation for the majority of recurrent miscarriages Obstetricians have hypothesised many causes for this condition and have developed numerous methods for treating it but the studies have been poorly controlled so that our understanding of the causes has not advanced Treatment of women with a history of recurrent miscarriage by paternal leukocyte infusion immunotherapy may be yet another form of treatment that is hailed as a new advance only to be rejected when subject to rigorous testing

Immunology of Pregnancy Gerard Chaouat,1992-11-10 *Immunology of Pregnancy* provides a detailed examination of the fetomaternal relationship including discussions on the cytokine network and the role of progesterone in an immunosuppressive network in pregnancy Reviews on animal models of immune abortion in addition to new data on decidua and suppression factors are included as well *Immunology of Pregnancy* will be a useful reference for obstetricians gynecologists immunologists and infectious disease specialists

Immunology of Pregnancy and Its Disorders C. M. M. Stern,1989 **Current Catalog** National Library of Medicine (U.S.), First multi year cumulation covers six years 1965-70 **Environmental Health Perspectives** ,1993 **Bibliography of the History of Medicine** , *Immunosuppression by Progesterone in Pregnancy* Julia Szekeres-Bartho,1992-03-18 *Immunosuppression by Progesterone in Pregnancy* describes a newly discovered fetal protective mechanism resulting from the interaction of the immune and endocrine systems As a response to antigenic stimulation by the fetus lymphocytes of pregnant women develop non classical progesterone receptors Receptor binding of progesterone in the lymphocytes triggers the production of a mediator protein Through an immunological pathway this protein prevents abortion in murine models and its serum concentration correlates with pregnancy outcome in humans The regulation of these unusual receptors as well as diagnostic and therapeutic implications of the mediator protein are discussed Immunologists reproductive biologists obstetricians gynecologists and other researchers studying this aspect of reproductive biology will find the book to be indispensable

Cumulated Index Medicus ,1989 **The High-Risk Fetus** Chin-Chu Lin,Marion Verp,Rudy E. Sabbagha,2012-12-06 Here is a practical comprehensive text on fetal diagnosis management and therapy which differs from competing texts in maternal fetal medicine by focusing on the fetus rather than the pregnant woman All new technologies in the field from ultrasound diagnosis to intrauterine treatment are placed in perspective for the practicing physician

Complications of Pregnancy Hassan Abduljabbar,2019-06-12 Complications of pregnancy are health issues that are caused by pregnancy itself These can happen during or after delivery obstetric labor complications or puerperal disorders Complications can be classified as mild severe immediate or long term health problems Complications of pregnancy can cause maternal morbidity and mortality The most common causes of maternal mortality are maternal bleeding maternal sepsis hypertensive diseases obstructed labor and pregnancy with the consequence of abortion which includes miscarriage ectopic pregnancy and medical abortion Health problems can develop during pregnancy which may be directly related to the pregnancy itself or nonobstetric

disorders such as pregnancy complicated by medical diseases One of the main complications is obstetric abnormalities that increase the risk of morbidity or mortality for the pregnant woman and her fetus High risk pregnancy is an indicator of a maternal complication during pregnancy **Issues and Reviews in Teratology** H. Kalter,2012-12-06 From a review of an earlier volume Both the experimental and the human aspects of teratology are presented in this comprehensive text by a stellar group of internationally recognized scientists and clinicians A valuable resource for those concerned with experimental teratology and risk assessment and those requiring general information about the causes of birth defects The treatment of these issues is sophisticated succinct and logical American Scientist Foreign assistance and related programs appropriations for 1986 United States.
