**Presence in the Modern World** Jacques Ellul, 2017-09-28 Presence in the Modern World is Jacques Ellul's most foundational book combining his social analysis with his theological orientation. Appearing first in French in 1948 and later in English as *The Presence of the Kingdom*, it has reached the status of a classic that retains all of its relevance dealing with today's challenges. How should we respond to such complex forces as technology or the state? How can we communicate with one another despite the problems inner to modern forms of media? Do we have hope for the future of our civilisation? Ellul responds by describing how a Christian's unique presence in the world can make a difference. Instead of acting as sociological beings, we must commit ourselves to the kind of revolution that will occur only when we become radically aware of our present situation and undertake a ferocious and passionate destruction of myths. In this way, states Ellul, we become the medium for God's action in the modern world.

**Hope in the Thought of Jacques Ellul** Lawrence J. Terlizese, 2005-10-30 Hope expresses more than an area of concentration in Ellul's thought; it is the central idea that binds his disparate elements together. Ellul believed that at this moment of history, the world since 1945, hope must preoccupy our thinking and lives. To understand hope, we must first comprehend its absence. This entails discerning what causes the absence of hope, namely the world's embrace of technique and the abandonment of God. Ellul also rejected these as a positive affirmation. He wanted to make a firm distinction between reality and truth. He affirmed modern abandonment as a realistic fact, as an accurate analysis of the present condition, not as an affirmation of the truth. Hope is truth in Jesus Christ, but truth must be asserted against these harsh facts. He used facts to incite hope in believers to shake their complacency and to realize their actual condition in the world. The idea of hope in the thought of Jacques Ellul can only be properly understood in light of dialectic struggle between negatives which amount to factual representations of the modern world and positives through which hope exerts itself in the face of these facts. From this tension will issue personal resolve. Technique has brought the world to great collective heights and achievements, but this has come at the expense of personal ends and meaning. Ellul attempted to bridge this gap by asserting individual meaning against the aggregated progress of technique without destroying the gains made by collective advance. This represents the central dilemma in Ellul's thought: how does one maintain meaning and personal aims in a world founded on corporate necessity? From the Introduction.

**Bibliography: 1992** National Library of Australia, 1988 *From Ethical Review to Responsible Research and Innovation* Sophie Pellé, Bernard Reber, 2016-06-13 The scientific and technological upheavals of the 20th Century and the questions and difficulties that went along with them—climate change, nuclear energy, GMO, etc.—have increased the necessity of thinking about and formalizing technoscientific progress and its consequences. Expert evaluations and ethics committees today cannot be the only legitimate sources for understanding the social acceptability and desirability of this progress. Responsibility must be shared out on a wider scale, as much in society as in the process of research and innovation projects. This book presents the

main works of Responsible Research and Innovation RRI from a moral responsibility point of view for which it calls upon no fewer than 10 understandings to bring out those which are positive and to support an interpretive and combinatory pluralism In this sense it demonstrates moral innovation It analyzes numerous cases and proposes perspectives that are rarely discussed in this emerging field current practices of ethical evaluation concerns of the integrity of research means for participatory technological evaluation etc It contributes to the pledges of RRI which largely remains theoretically undetermined even though it reorganizes the relationships between science innovation and society

Posthuman Personhood Daryl J. Wennemann, 2013-05-02 Posthuman Personhood takes up the ethical challenge posed by Francis Fukuyama's work Our Posthuman Future Daryl J Wennemann argues that the traditional concept of personhood may be fruitfully applied to the ethical challenge we face in a posthuman age He draws upon Wilfrid Sellars' treatment of the concept of a person within the manifest image of man in the world Sellars proposed that we develop a stereoscopic view of reality that includes both a scientific understanding of the world and a meaningful place for persons living and acting in the world Following Mary Anne Warren Wennemann develops a distinction between two meanings of the term human a biological meaning and a moral meaning and maintains that all biologically human beings are persons But it is not necessarily the case that all persons must be biologically human After drawing on a contemporary version of Kant's distinction between a theoretical possibility and a real possibility the book posits that biologically non human persons like robots computers or aliens are a theoretical possibility but that we do not know if they are a real possibility Finally Wennemann describes an ethic of self limitation for the posthuman age

**Politics of Security** Michael Dillon, 2002-01-31 In this critique of security studies with insights into the thinking of Heidegger Foucault Derrida Levinas and Arendt Michael Dillon contributes to the rethinking of some of the fundamentals of international politics developing what might be called a political philosophy of continental thought Drawing on the work of Martin Heidegger Politics of Security establishes the relationship between Heidegger's radical hermeneutical phenomenology and politics and the fundamental link between politics the tragic and the ethical It breaks new ground by providing an etymology of security tracing the word back to the Greek *asphaleia* not to trip up or fall down and a unique political reading of Oedipus Rex Michael Dillon traces the roots of desire for security to the metaphysical desire for certitude and points out that our way of seeking that security is embedded in 20th century technology thus resulting in a global crisis Politics of Security will be invaluable to both political theorists and philosophers and to anyone concerned with international relations continental philosophy or the work of Martin Heidegger

*The Ethical Challenge of Auschwitz and Hiroshima* Darrell J. Fasching, 1993-07-01 This book addresses the problem of religion ethics and public policy in a global technological civilization It attempts to do what narrative ethicists have said cannot be done to construct a cross cultural ethic of human dignity human rights and human liberation which respects the diversity of narrative traditions It seeks to do this without succumbing to either ethical relativism or ethical absolutism The author confronts

directly the dominant narrative of our technological civilization the Janus faced myths of Apocalypse or Utopia Through this myth we view technology ambivalently as both the object of our dread and the source of our hope The myth thus renders us ethically impotent the very strength of our literal utopian euphoria sends us careening toward some literal apocalyptic final solution The demonic narrative that dominated Auschwitz killing in order to heal is part of this Janus faced technological mythos that emerged out of Hiroshima And it is this mythic narrative which underlies and structures much of public policy in our nuclear age This book proposes a coalition of members of holy communities and secular groups organized to prevent any future eruptions of the demonic Its goal is to construct a bridge not only over the abyss between religions East and West but also between religious and secular ethics      **Shifting Contexts** Marilyn Strathern,2012-09-10 To suppose anthropological analysis can shift between global and local perspectives may well imply that the two co exist as broader and narrower horizons or contexts of knowledge The proof for this can be found in ethnographic accounts where contrasts are repeatedly drawn between the encompassing realm and everyday life or in value systems which sumultaneously trivialise and aggrandise or in shifts between what pertains to the general or to the particular      Resources in Education ,1994-04
