Research Methods For General Practitioners:

Research Methods in Primary Care Yvonne Carter, Cathryn Thomas, 1997 This book is designed to introduce a basic range of research skills relevant to primary care

A History of the Royal College of General Practitioners John Fry, R.J.F.H. Pinsent, 2012-12-06 John P Horder President 1980-82 The first 30 years of the College have been an exciting experience for those most closely involved Some have already passed on but this account has been written soon enough for many of the actors to be historians Future members of the College will be grateful to them for what they have written as well as for what they did as a remarkably determined and harmonious team Students of twentieth century medicine in this country will also be grateful for a first hand account of the development of an institution which has been closely associated with and partly responsible for important changes in medical care and education Those who read these pages may wonder how the builders of this young College could have found time to do much general practice They did The three editors of this history which covers 25 years and the general practitioner members of the Steering Committee all ran large practices in which they worked very hard throughout that time Most of their work for the College was done during off duty hours weekends and holidays The College could not have developed as it did had they not been personally concerned with the practical problems and needs of clinical medicine This is also true of many of the contributors It is impossible to mention everyone who deserves credit The editors hope that they may be forgiven for any serious omissions

Research in General Practice J. G. R. Howie, 2013-11-11 One of the paradoxes of general practice is that we emphasize on the one hand how important it is that the general practitioner learns to tolerate uncertainty and then regret on the other hand that so few general practitioners research the uncertainties they find in their every day work In the first chapter of my first edition of this book I suggested that general practitioners were missing opportunities to take part in a fascinating and rewarding professional activity because of an unnecessary fear of the unknown and tried to encourage more to try research for themselves There has been an impressive increase in what has been asked about researched and written about in the last decade and this second edition tries to bring up to date the advice I think may help others to become involved in research for themselves The basic principles of good research are of course timeless and apply to enquiry in any discipline However detail changes there are new aids to reviewing literature the increased emphasis in social science research has been matched by a range of new methods of collecting information computers have revolutionized how data is handled and statistics is an ever developing science in its own right The chapters in this book which describe what can be referred to as the technology of the research process have been revised to reflect the impact of these recent developments rather than re written

In the era of evidence based medicine the need to validate and scientifically explore Ayurvedic principles and therapies has become more pertinent than ever. The field of Ayurveda research is evolving and there is a growing demand for scholars who can integrate traditional wisdom with modern research methodologies. This book, *Research Methodology and Medical Statistics*, has been written specifically for MD and PhD scholars of Ayurveda with the aim of guiding them in conducting scientifically robust research that adheres to contemporary standards while respecting the uniqueness of the Ayurvedic system. The book is divided into two major sections: Research Methodology and Medical Statistics, each specifically designed to meet the needs of MD and PhD scholars in Ayurveda.

The first section on Research Methodology begins by laying the foundation for scientific inquiry, explaining the principles of formulating research questions, developing hypotheses, and selecting appropriate study designs. Given the unique nature of Ayurvedic treatments, this section covers various research designs including clinical trials, observational studies, qualitative research, and N of 1 studies, which can be particularly suitable for personalized Ayurvedic interventions. There is also an in-depth discussion on how to adapt conventional research designs to Ayurvedic contexts, such as accommodating individualized treatment protocols and dynamic diagnostic criteria. Special attention is given to challenges such as the standardization of herbal formulations, validation of Ayurvedic diagnostic tools, and integrating Panchakarma detoxification therapies into clinical research.

The second section, focusing on Medical Statistics, serves as a valuable resource for understanding the statistical tools and techniques needed for analyzing research data. Statistical analysis is an integral part of research, providing a framework for making sense of collected data and drawing meaningful conclusions. This section introduces fundamental statistical concepts in a manner that is accessible to those who may not have a strong background in mathematics, with examples specifically tailored to Ayurveda. Topics covered include descriptive statistics, inferential statistics, hypothesis testing, correlation, regression, and non-parametric tests.
