Research In Congenital Hypothyroidism:

Research in Congenital Hypothyroidism F. Delange, D.A. Fisher, D. Glinioer, 2012-12-06 Systematic screening for congenital hypothyroidism in the newborn was introduced some 15 years ago The main objective was the prevention of mental retardation due to thyroid hormone deficiency during the early months of life During the past decade screening programs have become routine throughout most of the industrialized world and many questions relating to implementation organization and quality control of such programs have been largely resolved Preliminary IQ and neurological data have indicated that screening and early treatment do in fact prevent mental retardation However a number of scientific questions related to congenital hypothyroidism remain unanswered and extensive research activities are ongoing in the field The objective of the organizers of the Brussels workshop was to focus almost exclusively on these current research aspects of the screening programs This workshop is the third international conference specifically devoted to neonatal thyroid screening The first was held in La Malbaie in Quebec in the fall of 1979 That meeting was well organized and highly productive Its proceedings constitute a bible in the field After the Quebec meeting we witnessed major and rapid advances in our understanding of neonatal thyroid physiology as well as screening methodology organization data management the significance of an approach to false negative and false positive results patient follow up and assessment of follow up and treatment and the psychoneurological evaluation of affected infants Some of these aspects were further developed during a second highly productive international conference organized in Tokyo in 1982

Psychoneuroendocrinology Clarissa S. Holmes, 2012-12-06: more intuitive study to greater empiricism. Frequently, chapters are divided into discrete sections to discuss each rather distinct era of inquiry. This approach, when used, can provide a valuable historical overview of the early clinical formulations about each disease. Even though many of the earlier research philosophies and techniques may seem so simplistic as to mitigate against their inclusion, early research hypotheses were often generated from astute observation of clinical findings and relationships. In addition to shaping later empirical questions, a review of historical antecedents provides a yardstick by which to measure the progress of more current studies, even though much is yet to be learned. As is true of any refinement of knowledge, the juxtaposition of the two approaches of study reveals that some of the early postulations about patient attributes and disease consequences have been confirmed, while other suppositions have been discarded. Although the generally subjective assessment methods used in the early studies may not have provided an optimal data base, it is interesting to note which clinical impressions were able to withstand greater empirical rigor and which were not. The book, at its inception, was intended to provide a succinct introduction to psychoneuroendocrinology research for practitioners and scientists who might be relatively unfamiliar with the area. However, it quickly became apparent that the sophistication of the information could not be readily reduced without vast oversimplification and loss of substance.

Advances in Perinatal Thyroidology Barry B. Bercu, Dorothy I. Shulman, 2013-03-08: Perinatal problems in thyroid gland physiology are common but complicated and present a diagnostic dilemma for the primary clinician. In December 1990, an international group of basic and clinical investigators gathered in Longboat Key, Florida, to address these issues. The participants included internists, obstetricians, pediatricians, neurologists, pathologists, and basic scientists in cellular metabolism, endocrine physiology, and molecular biology. The presentations contained within this book bring together their most current and vital research related to the field of perinatal thyroidology. This book is based on the dynamic and fruitful exchange of the participants at the symposium. We are indebted to these individuals whose valuable insights and efforts are contained within this text.
